CHINA SEA—SINGAPORE APPROACH.

Temporary mine field south-west of Blakang Mati island.

THE British Admiralty has given notice (No. 21 of 1892) that from 1st December 1891 to 1st March 1892, an area lying south-west of Blakang Mati island would be appropriated for practice with submarine mines. The limits of this mine field are defined as follows :— On the north-west by an imaginary line joining Rimau point and *spherical* red buoy moored with that point bearing N.-E. distant 5 cables; on the south-west by a line joining this

buoy and another *spherical* red buoy moored with Rimau point bearing north, distant one mile; on the south-east by a line drawn from the last mentioned buoy in a N.E. direction to Blakang Mati island; and on the north-east by the coast of that island.

Mariners are cautioned not to anchor or pass within the above mentioned limits.

AUSTRALIA—NORTH-WEST COAST.

PORT DARWIN.

Shoals lying in the approach to this port from the westward.

THE British Admiralty has given notice (No 22 of 1892) of the existence of two shoals (*Lorna shoals*) lying in the approach to port Darwin from the westward :—

Lorna shoals consist of two small patches, 9 cables apart, in a north-east and south-west direction, with 24 feet water on each over sand and shells. There are depths of 6 to 9 fathoms between the patches, and 11 to 12 fathoms around. The sea does not break on the shoals except during strong winds.

The north-east shoal is situated in lat. 12° 20′ 55″ S., long. 130° 19′ 20″ E.

The depths given are at low water spring tides.

MOLUCCA PASSAGE.

Non-existence of Bahia reef.

THE British Admiralty has given notice (No. 23 of 1892) of an unsuccessful search having been made in that vessel for Bahia reef, reported as lying in about lat. 1° 10′ S., long. 126° 50′ E. A sounding of 2,530 fathoms over dark green mud was obtained precisely in the above mentioned position, and similar depths were found in the vicinity.

This, in conjunction with the unsuccessful search for the danger made by H. M. Surveying vessel *Flying Fish* in 1885, and the very doubtful origin of the report, may be taken as disproving its existence. Bahia reef has therefore been expunged from the Admiralty Charts.

YELLOW SEA—KOREA—WEST COAST.

Sunken rocks in the approach to Chemulpho anchorage.

THE British Admiralty has given notice (No. 27 of 1892) of the existence of the two undermentioned sunken rocks lying in the approach to Chemulpho anchorage from the southward :—

1. A rock, with 7 feet on it at low water, lies on the east side of Flyng Fish channel, with the east extreme of Pirie island bearing about N. ¾ E., and Simpson island summit (524 feet) about E. by N., distant $1\frac{8}{10}$ miles.

Approximate position : lat. 37° 10½′ N., long. 126° 11¼′ E.

2. A rock, with 12 feet on it at low water, lies north-west of Pender rock, with North Watcher bearing about N.E. ¼ N., distant 1 1/10 miles, and Yung Hung Do summit about S. ⅜ E.

Approximate position: lat. 37° 18¼′ N., long. 126° 27′ E.

BAY OF BENGAL—BURMA COAST.

Decreased depths reported within a certain area—Gulf of Martaban.

THE following Notice to Mariners (No. 31 of 1892), issued by the British Admiralty, is republished :—

Information has been received through Commander R. F. Hoskyn, R.N., in charge of India Marine Survey, that within the area comprised (approximately) between lat. 15° and 15° 30′ N., long 96° and 97° E., the soundings are reported to be considerably less than heretofore shown on the Admiralty charts. Depths therefore cannot be taken as a guide for position.

GULF OF ADEN—GULF OF TAJURA, SOUTH SHORE.

Shoals in Lawada approach.

THE British Admiralty has given notice (No. 32 of 1892) of the existence of two shoals lying in the approach to Lawada (Lehadu) from the north-eastward. These shoals, apparently composed of sand and coral, circular in shape and about 5 cables in diameter, with 2 fathoms the least water found on them, and 11 fathoms between them, lie about 5 cables apart in a north-west and south-east direction.

The north-west shoal lies with Conical hill bearing approximately S. 9° W., and Coast hill S 50° W., distant 10½ miles, or in about lat. 11° 32¼′ N., long. 43° 19¾′ E.

NOTE.—It is stated that the soundings in the vicinity of the above-mentioned shoals are incorrect, there being in many places 8 fathoms less water than shown on the Admiralty charts.

[Third Publication.]

AUSTRALIA, NORTH-WEST COAST—EASTERN ARCHIPELAGO.

NOTICE to Mariners No. 18 of 1892, issued by the British Admiralty, is republished below.

The following information has been received from Commander W. U. Moore, H.M. Surveying Vessel *Penguin*, dated November 1891,—the result of recent examination of the several localities off the north-west coast of Australia:—

1. *Parry shoal*, composed of coral, extends within the 10 fathoms line 4 miles in an E. by N. and W. by S. direction, with a breadth of half a mile. The shoalest spot, with 5 fathoms water over it, lies one mile from its western end, in lat. 11° 9¼′ S., long. 129° 39½′ E.
2. *Flinders shoal* is circular in shape, and 1½ miles in diameter, with a general depth of 6 to 8 fathoms over coral. The shoalest spot, with 5 fathoms water on it, is situated in lat. 9° 52¼′ S., long. 129° 17′ E.

3. *Franklin shoal* is circular in shape, and one mile in diameter, with a general depth of 6 to 8 fathoms over coral. The shoalest spot, with 5 fathoms water on it, is situated in lat. 9° 52½′ S., long. 129° 19′ E.
4. *Blackwood shoal* is about 6 cables in diameter, with a general depth of 8 to 14 fathoms, coral bottom. The shoalest spot, with 7 fathoms water over it, lies in lat. 9° 53′ S., long. 129° 25′ E.
5. *Evans shoal* extends 4¾ miles in a N.N.W. and S.S.E. direction, with a breadth of 3 miles, and has a general depth of 8 to 16 fathoms. The shoalest spot, with 5 fathoms water on it over coral, lies 4 cables from the north extreme, in lat. 9° 53 S., long. 129° 32¾′ E.

There are quantities of snakes and sea perch on these banks.

CAUTION.—It is probable that many other shoals exist on or near the same parallel of latitude, both eastward of Evans' shoal and westward of Flinders shoal. The four shoals above mentioned are probably part of a submerged barrier, lying along the edge of the bank. Northward of them the character of the bottom changes to globigerina ooze.

NOTE.—The hill on the south coast of Bathurst island, eastward of cape Fourcroy, situated in lat. 11° 47′ 50″ S., long. 130° 8′ E., is conical and conspicuous, 420 feet in height, and forms a good landmark in approaching the coast.

EASTERN ARCHIPELAGO.

NOTE.—The existing plan of Kulewatte harbour, Damma island, on sheet of harbours and anchorages between Bali and Timor, No. 935, is misleading, the anchorage being much smaller than represented. The anchorage is in 20 fathoms water, fine black sand and coral, with the large hut on the point, close to the ruin of Watch house (now scarcely visible) bearing N.E. by N., distant 1½ cables. The space admits of one vessel (about 1,000 tons burden) lying at single anchor, or two of that size moored.

Revised Directions for the guidance of vessels—Karachi harbour.

NOTICE to Mariners No. 53, dated 12th January 1892, issued by the Port Officer, Karachi, is republished :—

In supersession of former Directions for Karachi harbour, dated 1st October 1886, the following with reference to draught of vessels is notified for general information :—

Tides.

	H. M.
High-water full and change	10 30
	Ft. In.
Average rise and fall *Spring-Tides*	9 6
Do. do. *Neap-Tides*	5 to 6 feet.

Depth of water in Entrance Channel.

Spring-Tides	31 feet.
Neap-Tides	26 to 27 feet.

Draught of Vessels entering or leaving the Port, Spring-Tides.

South-west monsoon.

The maximum draught allowed ... ... 25 feet.

Fair season.

The maximum draught allowed ... ... 27 feet.

Neap-Tides.

South-west monsoon.

Must be regulated by the state of the weather.

Fair season.

There should be at least two feet of water under the ship to insure her steering.

State of tide for entering port.

Sailing vessels should enter port on the ebb-tide. Steamers can enter either on the flood or ebb at the Pilot's discretion.

Masters of vessels should not on any account attempt to enter the harbour without a Pilot.

Time-Ball, "Merewether" Pier.

The Time-Ball is dropped daily (Sundays excepted) at one o'clock, Karachi mean time. Position of Ball Tower, Latitude 24° 49′ 11″ N., Longitude 66° 58′ 00″ E.

	H. M. S.	
Ball is hoisted close up at	0 55 00	P.M.
And dropped at Karachi mean time	1 00 00	"
Longitude (66° 58′ 00″ E) in time	4 27 52	"
Equivalent to Greenwich mean time	20 32 8	

Should the ball fail at 1-0-0 P.M. it is again dropped at 2-0-0 P.M. Karachi mean time, equivalent to 21H. 32M. 8S. Greenwich mean time.

Harbour improvements.

Among the extensive works executed, a *Breakwater* has been built, running out from Manora point in a S. by E. direction to a distance of 1,500 feet into 5 fathoms of water. This affords complete shelter to the *Entrance Channel* during the south-west monsoon; also a channel has been opened through the entrance with a depth of 21½ feet at low water spring-tides, 500 feet in breadth. The channel is marked by buoys, black on starboard hand, red on port.

The *Merewether pier*, 312 feet in length, has 26 feet at low water alongside.

The *Erskine wharf*, 2,008 feet in length, has accommodation for 5 vessels of the largest class.

An improved *Red Light* of the all-round-anchor pattern of ship's light is exhibited at the extreme end of the Breakwater, brightly visible in clear weather 5 nautical miles, and at least half that distance during the south-west monsoon.

The height of this light is 54½ feet above mean sea-level, and it is maintained throughout the year.

Caution.—An *Electric Light* is used for working steamers alongside the "Merewether" pier and "Erskine" wharf. The height above mean sea-level is 67½ feet, and would be visible from the westward about 15 miles. The position of this light being north 1¼ miles from the lighthouse on Manora, Commanders of vessels are warned not to mistake it for the Fixed light.

Note.—Mail Steamers arriving off the Port at night should burn two blue lights in quick succession; other vessels one, or two at intervals of two minutes. During the fair season, Pilots will board, but during the monsoon they must keep off the Port until daylight.

EATON W. PETLEY,
Port Officer of Calcutta.

GOVERNMENT OF BENGAL, MARINE DEPARTMENT.

No. 23Mne., dated Calcutta, the 15th March 1892.

THE following report of the 18th quarterly inspection of the Dock Works at Kidderpore which are being carried out by the Commissioners of the Port of Calcutta, is published for general information.

By order of the Lieutenant-Governor of Bengal,

C. W. ODLING,

Joint-Secretary.

QUARTERLY INSPECTION OF KIDDERPORE DOCK WORKS.

Dated Calcutta, the 8th March 1892.

From—LIEUT.-COL. A. D. MCARTHUR, R.E., and J. D. DAVIS, ESQ.,

To—The Secretary to the Government of Bengal, Public Works Department.

AGREEABLY to the orders of the Government of Bengal received with the Under-Secretary's letter No. 495M. of the 24th February 1892, we have the honour to report that the inspection of the Kidderpore Dock Works for the quarter ending 31st December 1891 was made by us on the 3rd instant.

Sixty-feet Lock.—The small quantity of work on the jetties at the head of the lock which remained to be done last quarter is practically completed.

Eighty-feet Entrance.—The jetty heads of this work, of which mention was made in the last report, have been finished.

Double Entrance to Dock No. 1.—Complete, as previously reported.

Tidal Basin.—Dredging to full depth between entrances and dock is now complete.

Dock No. 1.—The additional works rendered necessary by the displacement of the walls reported during the quarter ending 30th September 1890, have been completed, and nothing now remains to be carried out except the dredging of the earth berms left at the foot of the walls.

Graving Dock.—The finishing work in connection with the engine-house for this dock has been completed, and the work is now finished in every respect.

Addition to the Hydraulic Engine-house for Electric light Engines.—Buildings finished and erection of electric plant completed and tested with satisfactory results.

Dock Sheds.—The four sheds to the west side which were erected during last quarter have been roofed in, and satisfactory progress made with the two to the east side. It is expected that these will be completed shortly.

Works generally.—Nothing remained to prevent the dock being used except to dredge the base of the dams outside the Chetla lock and sluice and the dredging of the berms against the walls of the dock.

Expenditure.—The total expenditure up to the end of the quarter under review is reported to be Rs. 2,50,57,552-4-5, of which Rs. 2,24,77,092-10-9 represent outlay on works and Rs. 25,80,459-9-8 on account of land.

During the quarter under review the health of the workpeople was fair. The daily average number of workmen employed was 3,914, among whom there were 5·6 per cent. deaths, thus showing a death-rate of 17·93 per mille per annum.

Remarks.—We consider that the progress on the works in hand during the last quarter was satisfactory, and that, so far as we could judge, the quality of the work done was all that could be desired, promising completion at a very early date.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 12th March 1892.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
Burdwan Divn.	1	Burdwan Mar. 12, '92 Kalna ... Katwa ... Raniganj ...	Nil Nil Nil Nil	Weather—fair and warm. *Rabi* crops being harvested. Prices showing an upward tendency. Common rice— Srs. Sadar ... ... 13 Kalna ... ... 12¼ Katwa ... ... 13¼ Raniganj ... ... 13½ } per rupee.
	2	Bankura „ 12, '92	Nil	Weather—seasonable. Harvesting of *rabi* and pressing of sugarcane continue. Condition of cattle fair. Fodder and water hardly sufficient. Common rice selling at 15 seers 10 chitaks per rupee at Bankura and 16 seers 12 chitaks at Vishnupur.
	3	Birbhum „ 12, '92 Rampur Hât ...	Nil Nil	Weather—warm. Nothing to report about the crops. Fodder and water sufficient. State of cattle normal. Price of common rice 14 to 17 seers per rupee.
	4	Midnapur „ 12, '92	Nil	Weather—fair; becoming much hotter. Indigo doing well. *Rabi* crops are being reaped. Increasing want of fodder in the Sadar subdivision. Scarcity of water in Ghatál. Prices of common rice:— Srs. Sadar ... ... 14 Contai ... ... 16 Tamluk ... ... 13 Ghatál ... ... 14 } per rupee.
	5	Hooghly „ 12, '92 Serampore ... Jahánabad ...	Nil Nil Nil	Weather—seasonable. The *rabi* crop is not a good one. Sugarcane pressing in progress. No difficulty in obtaining fodder and water-supply. Prices of common rice:— Srs. Sadar ... ... 11 Serampore ... ... 12 Jahánabad ... ... 14 } per rupee.
	6	Howrah „ 12, '92 Ulubaria ...	Nil Nil	Weather—seasonable. *Rabi* crops not doing well owing to drought. Outturn of sugarcane good. Price of common rice 12 to 13 seers per rupee. Fodder and water-supply deficient. Health of cattle satisfactory.
Presidency Divn.	7	24-Parganas „ 12, '92	Nil	Weather—seasonable. Rain much wanted. Prospects of crops not good. Prices stationary. Supply of fodder and drinking water sufficient except at Canning and portion of Budge-Budge, where it is very difficult to get drinking water.
	8	Nadia „ 12, '92 Kushtia ... Meherpur ... Chuadanga ... Ranaghat ...	Nil Nil Nil Nil Nil	Weather—getting warm. Rain wanted for ploughing. Common rice selling at 12 to 13 seers 14 chitaks per rupee. Condition of cattle good, and supply of fodder sufficient, but there is fear of water failing in places owing to continued drought.
	9	Khulna „ 12, '92 Satkhira ...	Nil Nil	Weather—getting warm. Transplantation of *boro* nearly completed. Rain much needed for *boro* and other crops. Price of coarse rice varies from 14 to 16 seers per rupee. Fodder and water sufficient for cattle.
	10	Jessore „ 12, '92 Jhenida ... Magura ... Narail ... Bangaon ...	Nil Nil Nil Nil Nil	Weather—days hot and nights cool. *Rabi* harvest nearly over; outturn poor. Rain wanted for tilling. Water and fodder for cattle sufficient.
	11	Murshidabad „ 12, '92	Nil	Weather—getting hot. *Rabi* crops are being harvested. Fodder and water available for cattle. Coarse rice sells at 13 seers per rupee.
Chittagong Divn.	12	Chittagong „ 12, '92	Nil	Weather—becoming somewhat warmer; nights cool. Rain much wanted for vegetable crops. Prices tend to rise. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali „ 12, '92	Nil	Weather—seasonable. State of *rabi* crops bad owing to continued drought. No cattle-disease. Fodder and water-supply sufficient except in some parts of Fenny. Price of common rice in Sadar subdivision 13½ seers per rupee and in Fenny subdivision 14½ seers per rupee.
	14	Tippera „ 12, '92	Nil	Weather—cool at night, growing warm by day. Prospects of *rabi* fair. *Boro* paddy doing well. Rain in Brahmanbaria has improved the standing crops. Prices stationary.
	15	Chittagong Hill Tracts ...	...	Report not received.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—concld.			
Dacca Divn.			
16	Dacca — Mar. 12, '92	Nil	Weather—seasonable. Gathering of mustard going on; prospect fair. Jute being planted. *Boro*, *china* and *kaon* doing well, but rain wanted. Fodder available. Common rice selling at from 12 to 16 seers per rupee. Condition of cattle generally good.
17	Faridpur — „ 12, '92	Nil	Weather—seasonable: hot in the day, cool at night. *Rabi* crops being harvested, and their condition generally fair. *Boro* and *jali* paddy doing well. Land being ploughed for jute and *aus* rice. Prices of rice:— Srs. Sadar ... ... 14 } Madáripur ... ... 14½ } per rupee. Goalundo ... ... 13 } No cattle-disease and no want of fodder.
18	Backergunge — „ 12, '92	Nil	Weather—rather too hot in the day and cool at night. State and prospects of crops fair, but rain is much wanted. Ordinary rice selling at from 10 to 14 seers per rupee. Fodder and water sufficient.
19	Mymensingh — „ 12, '92	Nil	Weather—rather hot in daytime, cool at night. Prospects of crops good, but more rain wanted. Common rice selling at from 12½ to 17 seers per rupee. Condition of cattle good. Supply of water and fodder sufficient on the whole.
Rajshahye Divn.			
20	Dinajpur — „ 12, '92 Thakurgaon ...	Nil Nil	Weather—days getting hotter every day; nights still cool. Rain very badly wanted for the cultivation of lands for *bhadoi* and jute. Ploughing going on where possible. Price of rice at Sadar 11 seers per rupee, that at Thakurgaon stationary. Condition of cattle fair. Supply of fodder and drinking water fair.
21	Rajshahi — „ 12, '92 Nator .. Nowgong ...	Nil Nil Nil	Weather—nights seasonably cool, but days getting hotter every day. Harvesting of *rabi* crops still in progress. Prospects of standing crops good. *Boro* paddy doing well. Rain badly wanted. Condition of cattle good. Fodder plentiful. Water scanty only in the Nowgong subdivision. Price of rice varies from 12 to 15 seers per rupee.
22	Rangpur — „ 12, '92 Gaibanda ... Nilphamari ... Kurigaon ...	Nil Nil Nil Nil	Weather—days growing warmer; nights still cool. Cutting of tobacco in progress; that of sugarcane nearly completed. *Aus* paddy and jute are being sown where moisture is available, but rain is badly wanted everywhere. Price of common rice 12 seers per rupee. Fodder sufficient.
23	Bogra — „ 12, '92 Sherpnr ... Naukhilla ...	Nil Nil Nil	Weather—fine and dry, with high westerly winds. State and prospects of the few standing crops moderate. Rain is much needed for helping on ploughing. No scarcity of water or of fodder is reported. Common rice is selling on the average at 13 seers per rupee.
24	Pabna — „ 12, 92	Nil	Weather—still fresh west winds, but getting gradually warmer. Standing crops suffering for want of rain. Rain is also wanted for ploughing. Fodder and water sufficient. Common rice 12 seers per rupee.
25	Darjeeling — „ 12, 92	Nil	Weather—fair. Sugarcane cutting nearly finished in the Terai. Wheat and barley getting ripe. Fodder getting scarce in some parts of the Terai. No cattle-disease.
26	Jalpaiguri — „ 12, '92	Nil	Weather—getting hot. Outturn of tobacco reported to be 10 annas. Ploughing for *bhadoi* still continues. Rain urgently wanted. Common rice selling at from 8 to 10 seers per rupee. No cattle-disease. Fodder-supply fair.
BEHAR.			
Bhagulpore Divn.			
27	Monghyr — „ 12, '92 Begusarai ... Jamui ..	Nil Nil Nil	Weather—hot by day with west wind; cool at night. *Rabi* harvest going on. Outturn, as anticipated, 12 annas in Sadar and Begusarai and 6 annas in Jamui. Coarse rice 11 to 14 seers per rupee. Health of cattle good. Fodder and water scarce in places.
28	Bhágalpur — „ 12, '92	Nil	Weather—days hot with west wind; nights still pleasant. *Rabi* harvest in progress. Linseed giving about 4 annas outturn. Ploughing continues. Mango and *mahua* blossoms somewhat injured by dry west winds. Fodder for cattle still sufficient. Water low. Common rice 11 seers 6 chitaks per rupee.
29	Purnea — „ 12, '92 Kishanganj ... Araria ...	Nil Nil Nil	Weather—becoming warm rapidly and west wind blowing strongly. Ploughing continues. Sowing of *china*, *kauni*, and *mung* going on. Gram and tobacco being gathered. Only a small part of indigo yet sown for want of moisture. No actual want of fodder or water. No cattle-disease. Prices of common rice:— Srs. Sadar ... ... 11 to 12 } Kishanganj ... ... 10 } per rupee. Araria ... ... 13 }
30	Malda — „ 12, '92 Chanchal ... Shibganj ... Gajol ...	Nil Nil Nil Nil	Weather—getting warm every day with westerly wind. Harvesting of *rabi* crops has commenced; outturn 10 to 12 annas. Plants of *boro* rice thriving. Supply of fodder and water continues satisfactory. Common rice sells at from 10 to 13 seers 5 chitaks per rupee. No cattle-disease.
31	Sonthal Parganas — „ 12, 92	Nil	Weather—hot in day with west wind; cool at night. Sugarcane plantation begun. *Mahua* has begun to drop. It promises well if weather keeps clear and dry. Mangoes also promise well. Prices rising but very slowly. Rice 11 to 14 seers per rupee. Water and fodder sufficient.

	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—*concld.*					
PATNA DIVISION.	32	Patna	Mar. 12, '92	Nil	Weather—getting hotter. Strong west winds prevailing. *Rabi* harvest in progress. Opium being gathered. Strong west winds have done some damage to poppy by drying up the capsules somewhat prematurely and by knocking off the leaves. Prices of common rice vary from 12 to 14 seers per rupee.
	33	Gaya Jahanabad Aurungabad Nawáda	,, 12, '92	Nil Nil Nil Nil	Weather—season growing hot with high west winds. Harvesting of *rabi* in progress. Extraction of opium going on. Prices of food-grains rising. Supply of fodder and water yet sufficient.
	34	Shababad Buxar Bhabhua Sasarám	,, 12, '92	Nil Nil Nil Nil	Weather—hot with strong west winds. Harvesting of *rabi* proceeding; general outturn very fair. Opium still good. Prices stationary, but wheat is beginning to be cheaper. Fodder for cattle sufficient.
	35	Darbhanga	,, 12, '92	Nil	Weather—getting warmer with strong west winds. Harvesting of *rabi* still going on. Prices almost stationary. Fodder and water becoming scarce in places.
	36	Muzaffarpur Hajipur Sitamarhi	,, 12, '92	Nil Nil Nil	Weather—hot. Early *rabi* being harvested. Paddy, *mung* and *china* are being sown in places. Lands are being prepared for paddy sowing. Indigo sowing almost completed. Prices slightly rising in the Sitamarhi subdivision. No sign of distress as yet. Fodder and water-supply sufficient.
	37	Saran	,, 12, '92	Nil	Weather—hotter at close of week with strong west winds. *Rahar* almost ready for the sickle. Harvesting of *matar*, *kerao*, *masur*, wheat and barley has commenced. Expected outturn of poppy about 11 annas. Fodder and water for cattle sufficient. Prices of common rice:— Srs. Ch. Chapra ... ... 13 8 } Siwán ... ... 13 0 } per rupee. Gopalganj ... ... 13 6 }
	38	Champaran	,, 12, '92	Nil	Weather—days hot, nights still cool. *Rabi* crops are ripening and being reaped in some places. Collection of opium commenced. Prospects favourable in the Bettia subdivision, but meagre in the Sadar subdivision owing to the high west wind. Prices have slightly increased. Fodder and water plentiful.
ORISSA.					
ORISSA DIVN.	39	Cuttack	,, 12, '92	Nil	Weather—mornings cool, days hot. Prospects of *dalua* and other standing crops good. Rain badly wanted. Common rice sells at from 12 seers 8 chitaks to 20 seers per rupee. Fodder-supply sufficient.
	40	Puri	,, 10, '92	Nil	Weather—seasonable. Land being ploughed in places for next *sarad* crop. *Dalua* paddy ripening. Miscellaneous crops doing well. Common rice sells at from 12½ to 17 seers per rupee.
	41	Balasore	,, 12, '92	Nil	Weather—dry but cool for the time of year. Rain much wanted. Coarse rice selling at from 15 to 18 seers per rupee. Fodder sufficient.
CHOTA NAGPORE.					
South-West Frontier Agency.					
CHOTA NAGPORE DIVN.	42	Hazáribágh Giridih	Mar. 12, '92 ...	Nil Nil	Weather—seasonable: warm and windy. Estimated outturn of *rabi* from 2 to 12 annas; sugarcane 16 annas. Prospect of *mahua* good. Water and fodder sufficient in most places.
	43	Lohardaga	,, 12, '92	Nil	Weather—getting hot. Ploughing continues. Prospect of mango favourable. Water and fodder plentiful. Common rice selling at 13 seers a rupee.
	44	Palámau	,, 12, '92	Nil	Weather—getting hot; cold at night. *Rabi* crops are ripening. In some places harvesting has commenced already. Common rice selling at 14 seers per rupee. Fodder and water-supply sufficient.
	45	Singhbhum	...	...	Report not received.
	46	Manbhum Gobindpur	,, 12, '92 ...	Nil Nil	Weather—getting warmer every day. Coarse rice selling at 15 seers per rupee. Fodder and water-supply getting more and more scarce.

* Means of 5 days. | † Means for 4 days. | ‡ Mean for 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 12th of March 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	District observations. Rainfall. Of week. Mean for district.	Normal mean.	Since 1st of month. Mean for district.	Normal mean.	Variation.	Since 16th October 1891. Mean for district.	Normal mean.	Variation.	Of week. Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 15th March* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 12TH OF MARCH 1892.

ON the last day of the previous week a feeble barometric depression had passed away in an entirely direction from Bengal. Dry westerly and north-westerly winds then set in over the province which were accompanied by increasing pressure, falling temperature, and a rapid decrease in the humidity, and the air at many stations had become unusually dry. On the 6th, pressure continued to increase rapidly, and there had been a rapid fall in the temperature, the decrease in the mean temperature at some stations equalling as much as from 7° to 9°. Humidity also continued low, though the air was not so dry as on the 5th, and a steady westerly wind current was reported at almost all stations. On the 7th pressure began to give way slowly, but temperature again fell, and the mean temperature over the whole province became about 6° or 7° below the normal of the day, and the defect in the night temperature in some cases exceeded 10°. The changes on the 8th were unimportant, and pressure was generally falling slowly, while temperature was increasing rather briskly. On the 9th, temperature again rose moderately, and pressure was almost steady over the greater part of the province, but it had become comparatively somewhat low in the north of the province, and hence there was a tendency for southerly winds to set in over the greater part of the province. Almost precisely similar conditions obtained on the 10th, and on the 11th pressure was falling moderately to rather rapidly and had become below the normal, the defect ranging up to more than a tenth of an inch in North Bengal. Temperature had also generally risen and had became above the normal by small amounts, while on the 12th a further moderate fall of pressure occurred, and pressure became in defect by amounts ranging from a tenth up to a sixth of an inch in parts of North Bengal, while a further increase of temperature had occurred, and the mean temperature had become generally from about 2° to 5° above the normal. Winds, however, on this day were strongly westerly over the whole province, and hence humidity continued low at most stations.

Throughout the whole week, therefore, weather has again been fine over the entire province and the whole province has been rainless.

Pressure—Has been below the normal in all districts, but the defects have been comparatively small in the south-western districts, where they do not as a rule exceed 0·03″ or 0·04.″ They have, on the other hand, been largest in North Bengal and North Bihár, and at such stations as Bogra and Dinajpur they exceed 0·08″, while in the higher strata of the air, as at Darjeeling, the defect has been reported to be 0·102″.

Temperature—Was unusually low for the season during the first part of the week, but it became again above the normal at its close. For the whole week the mean temperature of the province has been 2° below the normal, but the defects have been largest in South-West and East Bengal, where they have averaged nearly 3°.

The variation of temperature for the week is, however, most clearly seen in the table below, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the same period. It will be seen that the maximum or day temperatures have been fairly normal, but that the night temperatures have been largely in defect, the deficiency at Calcutta equalling 8·2° and at Cuttack, Dacca, Burdwan, and Purnea exceeding 6°:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 12th March 1892.

	Normal mean maximum temperature for the week ending 12th March.	Actual mean maximum temperature for the week ending 12th March 1892.	Variation of actual mean from the normal. The average pressure of the corresponding period for 24 years, S.-G.'s Office ...	29·842
	Hours.
The total number of hours of bright sunshine	67·6
The maximum possible number of hours of sunshine	82·8
	°
The mean temperature of the seven days	75·1
The average temperature of the corresponding period for 24 years, S.-G.'s Office	78·3
The extreme variation of temperature	40·4
The maximum temperature	96·4
	Miles.
The highest velocity of the wind in one hour	14
	lbs.
The highest pressure of wind on one square foot	?
	%
The mean relative humidity	49
The average relative humidity of the corresponding period for 24 years, S.-G.'s Office	69
	Inches.
The total fall of rain from 6th to 12th March 1892	Nil
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	0·31
The total fall from 1st January to 12th March 1892	0·04
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	2·28

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

C. LITTLE,

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

Calcutta, the 14th March 1892.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending with Saturday, the 20th February 1892.

* Includes 6,631 tons and 4,967 tons during 1891 and 1890, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock 8,963 tons and 13,321 tons for the year 1891 and 1890, respectively, for which no "Up" and "Down" register maintained.

Statement of principal commodities carried on the Eastern Bengal State Railway during the month of December 1891.

INCREASES.

	Tons.
Coal	16,287
Partly due to provision for brick-burning.	
Rice	2,499
The chief increase is in despatches from Goalundo, Joypurhat and Nawabganj. This is due to a rise in prices in the northern districts.	

DECREASES.

	Tons.
Jute, screwed	1,136
Haldibari and Mymensingh show the principal decreases.	
Jute, unscrewed	8,624
The decrease was general among jute-booking stations on the several sections, due to short crop.	
Railway plant and rolling-stock	4,368
Due to fewer repairs and renewals.	

HARRY STUART,
Examiner of Accounts.

CALCUTTA, *the* 23*rd February* 1892.

IMPROVEMENT OF SANSKRIT TOLS IN BENGAL.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 21st March 1892.

RESOLUTION No. 857.

READ the following papers on the subject of Sanskrit *tols* in Bengal:—

Letter from the Director of Public Instruction, No. 6726, dated the 5th December 1890.

Letter to the Director of Public Instruction, No. 24, dated the 12th January 1891.

Letter from the Director of Public Instruction, No. 9, dated the 17th January 1892, and its enclosure, from Mahamahopádhyáya Mahesa Chandra Nyáyaratna, C.I.E., Principal of the Sanskrit College, Calcutta.

The Principal of the Sanskrit College was deputed, under the orders of this Government, on a tour of inspection of Sanskrit *tols* in Bengal, the object of the inspection being to ascertain by personal enquiry which of the *tols* in the districts visited by him have the highest reputation, to report all necessary details regarding those *tols*, and, on the completion of his investigation, to submit recommendations for the encouragement of teachers and pupils at these institutions.

2. The report since received contains many interesting details regarding the constitution of the *tols*, the course of studies pursued in them, and the special characteristics which distinguish those of Bengal, Bihár, and Orissa. In the Province of Bihár, which Pandit Mahesa Chandra Nyáyaratna first visited, Sanskrit studies are, it is reported, at a low level. There is greater irregularity in the working of the *tols* in this particular portion of the Province than in other

parts, owing to the greater poverty of the Bihár pandits, which compels them to go about visiting wealthy people and receiving gifts from them, to the necessary interruption of their work of teaching. It is not that gifts are not made to pandits in Bihár by noblemen and other wealthy people, but that such gifts, not being so systematic as they are in Bengal, afford the Bihár pandits less help than the Bengal pandits receive. Most of the Rajas of Bihár maintain, however, certain *tols* in their own towns, paying regular salaries to the pandits, and in some cases allowing free board also to the students. The Maharaja of Darbhanga already spends annually a large sum on the support of Sanskrit studies, and on the occasion of the visit of Pandit Mahesa Chandra Nyáyaratna he further signified his desire to establish a Sanskrit College at Darbhanga, and to make it a centre for the Title Examination. Associations have also been established in several places in Bihár with a view to promoting Sanskrit studies.

3. Of the three districts of the Orissa Division, Balasore has no *tols*. There are several in the Puri district and a few in Cuttack. The Jajpur subdivision of the latter differs greatly from the rest of the province in the matter of Sanskrit learning. It has long been noted as a Sanskrit centre. Vedic ceremonies have obtained here for many ages, there being even now two "*Agnihotri*" Brahmans who observe the "*Agnihotra*" ceremony, *i.e.*, keep the fire which was lighted at their birth perpetually burning, and perform the *Homa* ceremony with this fire morning and evening. This will continue till the death of each, when his cremation pile will be lighted from the fire so maintained. The Principal reports that in Orissa Sanskrit learning is at a lower level even than in Bihár, but that the institution of the Title Examination has given some impetus to the study of Sanskrit literature; that those who obtain titles on the result of this examination are held in honour in the province; and that the possession of a title is a passport also to employment in Government and private schools. The Puri and Dhenkanal Sanskrit Pathsalas alone send up candidates to the Title Examination. The rules in connection with the Title Examination are little known in the Province, except at Puri and Dhenkanal, and this, together with the absence of any local systems of examination, such as exist in Bengal and Bihár, operates prejudicially in the Province. The present low ebb of Sanskrit teaching in Orissa is the more to be regretted, as it appears that in old times pandits were very liberally patronised by the Rajas, so much so that they received numerous rent-free grants of villages, certain parts of which were marked out for the exclusive residence of Brahman families devoted to the practice of religious rites or to the cultivation of Sanskrit learning.

At Puri, besides the Sanskrit pathsala, there are *maths* and *tols*, where Sanskrit teaching is carried on. A "math" is properly a convent of monks presided over by a *Swámí* or *Mahant*, the *Swámí* being absolute ruler of the *math* and owner of its property; but in the course of time the *maths* in Orissa have become places of instruction for students of Sanskrit.

The report notices as a peculiar feature of a few of the *tols* in the Puri district that, contrary to the inherent principle of a *tol*, the pandits, so far from teaching, lodging and boarding their pupils free, receive trifling fees of one, two or even three annas a month from each of the students.

4. In the Province of Bengal, which has always been especially celebrated for the study of the Nyáya philosophy, the renowned seats of Sanskrit learning are Nadia, Bikrampur, Bakla Chandradwip, Tribeni, Bhatpara, and Khanakul-Krishnagar. In Bengal, as a rule, pandits lodge and feed their pupils, the practice of old being for zamindars to make grants in perpetuity of rent-free land to pandits noted for their learning. It was mainly rent-free land that enabled pandits to support their families and bear, besides, the expense of free lodging and boarding for their pupils. Grants of rent-free lands have now to a great extent gone out of fashion, and have almost entirely ceased. Money contributions or gifts of rice to *tol* pandits continue to be regularly made by some patrons of Sanskrit learning, though such instances also are said to be at the present time few in number. The resources of pandits consist now chiefly of gifts called *vidáya*, received from wealthy people of good caste, at *sráddhas*, marriages, the consecration of temples and tanks, return from pilgrimages, &c. Of late also certain patrons of Sanskrit learning have established institutions for the prosecution of Sanskrit studies, in which the teachers receive fixed salaries and the pupils receive stipends. The *tols* of Nadia, originally

brought into being by royal initiative and long maintained by royal patronage, came to be maintained by Hindu zamindars after the Musalman conquest of the land. Owing, however, to the steady decline in Nadia, as elsewhere in Bengal, of grants of rent-free land and money gifts by Hindu zamindars and other wealthy Hindus, the numbers both of *tols* and pupils in that place have been gradually diminishing.

5. Besides the *tols*, there are institutions, religious and secular, managed either by local associations or by individual patrons, that have been engaged in promoting the study of Sanskrit. Twenty such institutions exist already in Bihár, five in Bengal, and one in Orissa. Of these five are examining Associations, namely (1) the Dacca Sárasvat Samaj; (2) the Bihár Sanskrit Sanjivan; (3) the Boaliya Dharma Sabha; (4) the Nadia College of Pandits; and (5) the Bhatpara Pariksha Samaj. All these Associations are said to have promised co-operation in any measures that may be taken by Government for the improvement of *tols* and the encouragement of Sanskrit learning; and in the following scheme it is proposed to make use of some or all of these associations, as well as of others that may hereafter be established with an approved organization, in holding examinations and in distributing rewards in accordance with the results

6. With a view to the revival of Sanskrit study in these indigenous *tols*, specific proposals have been made by Mahamahopádhyáya Mahesa Chandra Nyáyaratna and approved by the Director of Public Instruction, which may be classified as follows:—

First—A provision for large salaries or stipends (non-pensionable) to the teachers of a few selected *tols* or other institutions for the study of Sanskrit; and

Second—A system of rewards in the form of small stipends to be awarded annually to teachers and pupils on the results of periodical examinations; the stipends to teachers being tenable for one year, and those to pupils for two years, a term which may be extended to three years in the case of Nyáya students.

7. The details of the proposals under the first and second heads are as follows:—

First head.	Total per annum. Rs.
Three stipends to Nadia *tols*, at Rs. 100, Rs. 60, and Rs. 50 a month	2,520
One stipend at Revilganj at Rs. 40	480
Ditto at Puri, Rs. 30	360
	3,360

Second head. (*a*) *Rewards to teachers.*	Rs.
Stipends to 20 teachers on the results of the first examination, at Rs. 6 a month each, and 20 teachers at Rs. 8 a month each ...	3,360
Stipends to 15 teachers on the results of the second examination, at Rs. 10 each a month, and 15 teachers at Rs. 12 each a month	3,960
Total ...	7,320

(*b*) *Rewards to pupils.*	Annual cost. Rs.
On the results of the first examination, stipends to 100 pupils at Rs. 2 a month each	2,400
On the results of the second examination, stipends to 30 pupils at Rs. 3 a month each, and 30 pupils at Rs. 4 a month each...	2,520
	4,920

Of the grants included under the first head, it is suggested that the first and third of the Nadia stipends, as well as the stipends proposed for Revilganj and Puri, should be allotted to *tols* which devote themselves especially to the study of *Nyáya*, while the second of the Nadia stipends (Rs. 60) is intended for a *tol* in which *Smriti* (Hindu law) is the main study.

8. The present sanctioned expenditure amounts to Rs. 3,400, thus made up—

	Rs.
Allowance to *tol* students at Nadia, at Rs. 200 a month ...	2,400
Grant to Dacca Sarasvat Samaj	500
Grant to Bihár Sanskrit Sanjivan	500
	3,400

Of this amount it is asked that the first item may be continued, on the understanding that payments are in future made only to students of *Nyáya* and *Smriti* not resident in the town of Navadwip or its neighbourhood; but it is agreed that the second and third items may cease on sanction being accorded to the proposals formulated in the preceding paragraph. The total expenditure will therefore amount to Rs. 18,000 a year (Rs. 3,360 + Rs. 7,320 + Rs. 4,920 + Rs. 2,400), or Rs. 14,600 in excess of the present expenditure.

9. The Lieutenant-Governor has read with much interest the report of Pandit Mahesa Chandra Nyáyaratna and of the Director of Public Instruction on the subject of Sanskrit *tols* in Lower Bengal, and desires that the thanks of Government may be conveyed to the Pandit. As regards financial provision for carrying out the proposals, the Lieutenant-Governor directs that in addition to the allowance of Rs. 200 a month now paid to *tol* students at Nadia, the following arrangements shall be made:—

(*a*) Five stipends to *tols*, costing Rs. 3,360, will be awarded during the year 1892-93, the cost being met from savings in the Education Budget for that year.

(*b*) During the year 1892-93, on the result of examinations conducted by the recognised Associations, the whole of the rewards to teachers and one-half of the rewards to pupils will be awarded, *i.e.* Rs. 7,320 *plus* half of Rs. 4,920, or Rs. 9,780. This sum will have to be paid in the year 1893-94, so that in that year there will be required Rs. 3,360 *plus* Rs. 9,780, or Rs. 13,140.

(*c*) In 1893-94, examinations will again be held by the Associations for rewards to teachers and the remaining half of the rewards to pupils, and in 1894-95—

	Rs.
A provision will have to be made for	13,140
And the rest of the rewards to pupils	2,460
	15,600

(*d*) Provision should be made in due course in the Education Budgets of the years 1893-94 and 1894-95 for the additional sums of Rs. 13,140 and Rs. 15,600, that is, for a total expenditure of Rs. 18,000 in the latter year.

10. The Director of Public Instruction will be desired to submit hereafter for the orders of Government a scheme for the distribution of the rewards for teachers and pupils among the different Associations of the province, to be by them awarded, for 1893-94 and subsequent years, on the results of the examinations held by them. The Director will also be requested to settle, in communication with the Principal of the Sanskrit College and the local Associations, the subjects and standards of the different examinations, and the centres at which they are to be held.

11. The Lieutenant-Governor desires also to invite the co-operation and support of the wealthy nobility and gentry in Bengal in the furtherance of the study of Sanskrit, which the Government is anxious to encourage by the means above described.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Director of Public Instruction for information and guidance, and for communication to Pandit Mahesa Chandra Nyáyaratna, and also to the Financial Department of this Office.

Ordered also that a copy of the Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

No. 9, dated Calcutta, the 17th January 1892.

From—SIR ALFRED CROFT, K.C.I.E., Director of Public Instruction, Bengal,
To—The Secretary to the Government of Bengal, General Department.

IN continuation of my No. 6745, dated the 3rd December 1891, I have the honour to submit the accompanying report by Mahámahopádhyáya Mahes Chandra Nyáyaratna, C.I.E., Principal of the Sanskrit College, Calcutta, communicating the results of the inspection of Sanskrit *tols* throughout Bengal, which he was instructed to undertake in Mr. Maude's letter No. 24, dated the 12th January 1891. The supplementary instructions which I issued to the Pandit in accordance with those orders were submitted to Government with my letter No. 434, dated the 22nd January 1891.

2. The report contains many interesting details hitherto unpublished, regarding the constitution of the *tols*, the course of studies pursued in them, and the special characteristics which distinguish the *tols* of Bengal, of Bihar, and of Orissa. A full account is given of the various associations, religious or secular, which have been established in recent years for the promotion of Sanskrit study; of the Sanskrit schools maintained by these associations as well as by individual patrons of learning; of the examinations conducted by them, either independently of or in subordination to the Sanskrit Title examination held annually in Calcutta and other centres; and of the effect of such examinations in maintaining and stimulating the systematic study of Sanskrit. The newly-formed association known as the "Nadiya College of Pandits," the declared object of which is to combine the schools and studies of Nadiya into an organised institution, comes in for some candid criticism. The causes which have led to the decline of the *tols* and of the indigenous study of Sanskrit in recent years are discussed; and the report concludes with some general recommendations for reviving Sanskrit studies in the future, by a system of stipends to be awarded to a few selected teachers, and of rewards after examination to be paid to teachers and pupils alike.

3. Before considering the specific proposals which the Mahámahopádhyáya has made for the expenditure of Government money on the *tols* of Bengal, it is necessary to enquire whether there is reason to believe that such expenditure would have the desired effect, namely, a revival of Sanskrit study in these indigenous institutions. In the following extract from paragraph 81 of the report, Pandit Mahes Chandra Nyáyaratna, while clearly explaining the causes of the present decay, declares that it can only be arrested by very liberal help from outside:—

"The old custom of sons pursuing the calling of the father, which made pandits' sons grow up to be pandits unless they happened to lack the mental power to do so, is losing its hold upon the country, and pandits' sons are accordingly being trained up for secular callings that promise better prospects from a worldly point of view than the calling of a pandit. Thus it is that families of pandits in Bengal have all been tending to assimilate themselves to the other Brahman families of the province, *i.e.*, have all been tending towards secular callings that hold out prospects of pecuniary gain. Most of the best pandits of Bengal, all the Mahámahopádhyáyas without exception, have trained up or are training up their sons or grandsons for other callings than their own—have given them or are giving them, in fact, an English education. It is but natural that men should prepare their sons for such walks of life as they think would be most advantageous to them, and this is what the pandits of Bengal have been doing. Non-pandit Brahman families hardly ever think of training up any juvenile member at a *tol* for the career of a pandit. Our *tols* are thus being threatened with a stoppage of supply of boys. An utter stoppage of supply is not likely to occur in the near future, but matters appear to be clearly tending to this. The aggregate intellectual capacity of the present generation of *tol* students is lower than that of the past generation as unquestionably, I think, as the number is lower; and this deterioration in quality and decrease in number, judging from present circumstances, tend to be progressive. To arrest this decline very liberal help from individuals and from the State would be needed."

The writer himself supplies a significant illustration of the tendency of the younger generation of pandits to forsake the calling of their ancestors. Himself the descendant of a long line of pandits, he is the last of his race, and his three sons are distinguished students of the Calcutta University. The question of chief importance is whether any aid that Government or that private individuals or associations would be likely to afford, could have any sensible effect in arresting this tendency. It may readily be admitted that in

the case of men like Pandit Mahes Chandra Nyáyaratna, who have achieved distinction in paths that lead away from the simple surroundings of a *tol*, and whose lives are more largely affected by the influences and the interests of modern civilisation, it would have no such effect. But for the others—for the young Brahmans, sons of pandits of the old stamp, who have formed, and must always form, the backbone of the *tol* system—what effect would a fairly liberal system of aid have upon them? Our educational returns show some 16,000 or 17,000 students of *tols*, but only a small proportion of these intend to devote their lives to Sanskrit; the rest merely spend a year or two in a *tol* in order to acquire a rudimentary knowledge of the language before proceeding elsewhere for the studies that pay. We have to consider the probable effect of the proposals upon the pandit class—upon those who by the tradition of generations have become the repositories of indigenous Sanskrit learning. It is not enough, however, to show that the immediate result of instituting a system of stipends would be to attract to the *tols* a number of pupils of this class who now, owing to the difficulty of securing a maintenance during a further period of study, have to be take themselves to other callings. It is necessary to show further that, after the period of pupilage is past, such men, or a sufficient number of them, will continue to pursue the same path, no longer as students but as teachers. But these two questions are in reality one. The *tols*, it is urged, are falling away for want of pupils and of the funds for their maintenance. Provide a widespread system of stipends, and pupils will be attracted by the hope of gaining them. Provide qualified pupils and a provision for their maintenance, and there will be no lack of teachers.

4. I now turn to the specific proposals which the Pandit has made for giving effect to these principles. They are not fully contained in his report, but have been elaborated in subsequent conferences that I have had with him on the subject. They consist of two portions; the first, a provision for large salaries or stipends (non-pensionable) to the teachers of a few selected *tols* or other institutions for the study of Sanskrit; the second a system of small stipends to be awarded annually or for short terms to teachers and pupils on the results of periodical examinations.

5. The first set of proposals is contained in paragraphs 82 to 85 of the report. They include the award of three stipends of Rs. 100, Rs. 60, and Rs. 60 a month, respectively, the first two to the two Nyaya pandits, and the third to the Smriti pandit, who may from time to time be adjudged by Government to be the most distinguished and deserving among the pandits of Nadiya, the historical seat of Nyaya and Smriti learning. In general they would be awarded for the pandit's lifetime, or for so long as he maintained his *tol*; but there would be nothing to prevent the Government from transferring any stipend from its present possessor to a worthier claimant. A further proposal is that an allowance of Rs. 40 a month should be made to the Thompson Gautama Pathsala at Revilganj for the maintenance of a teacher of Nyaya, and an allowance of Rs. 30 a month for the same purpose to the Sanskrit pathsala at Puri, which is maintained by an endowment of Rs. 5,500 made by the late Maharaja of Balarampur, and by a subscription of Rs. 1,300 a year continued by his widow. The last proposal is that a grant of Rs. 25 a month should be made to the Sanskrit College of Calcutta for the maintenance of five Vedic pupils, when the projected class for teaching the Vedas is opened in that institution. Since the submission of the report, however, the Mahanta of Tarakesur has not only endowed the Vedic class in perpetuity by an investment of Rs. 9,000, yielding Rs. 360 a year, but has also made provision for the maintenance of students attending the class by a further investment of Rs. 3,000. Both these generous gifts have been accepted by Government.* in addition to the earlier gift of Rs. 5,000 made for the establishment of a Vedic class by Babu Dwarkanath Pal of Bansbarai. In view of these endowments, Pandit Mahes Chandra has now withdrawn his proposal for the grant of Rs. 25 a month for scholarships to Vedic pupils in the Sanskrit College. He has also accepted a suggestion to reduce the second of the two Nyaya stipends mentioned above from Rs. 60 to Rs. 50. These amended proposals involve a monthly expenditure of Rs. 280 for five stipends, three in Nadiya, one at Revilganj, and one at Puri.

* General Department, No. 670, dated 11th December 1891, to the Director of Public Instruction.

In this connexion it will be noticed that the Pandit also urges (paragraph 83) the continuance of the grant of Rs. 200 a month which is made by Government to the pupils of the Nadiya *tols* as a subsistence allowance. This allowance dates from before 1829. He proposes the following modifications in the conditions under which the grant is now made; that it should be confined, as in former days, to students of Nyaya and Smriti, local residents being excluded; and that the ordinary allowance to a student should be Rs. 4 a month, subject to reduction to Rs. 2 in the case of certain students who already receive daily allowances from existing private foundations attached to two *tols* known as the *páká* and the *kánchá tols*.

6. The reasons which may be urged for giving exceptional encouragement to the study of Nyaya at Nadiya are the following. Nadiya is recognised throughout India as the head quarters of the Nyáya philosophy, and students resort thither from all parts of the continent in order to study it. It would be regarded as a great loss to Sanskrit studies, if Nyáya were to decline and fall into neglect in its chosen home; and without special support there may be some danger of this result. The offer by Government of two valuable stipends to those who might be selected from time to time as the foremost professors of that subject would unquestionably supply an incentive and encouragement to the whole body of teachers of Nyáya, both present and future. The proposed stipends have been fixed at such a rate as will relieve their holders from the necessity of roving about the country in quest of presents for the support of their *tols*; the annual income from all sources of a pandit of the highest class at Nadiya being estimated at something like Rs. 1,200. One of the chief drawbacks to the present system is the serious interruption of studies which is caused by the frequent absences of the teacher on this account; and it is alleged that studies which now occupy ten or twelve years could be got through in half the time if they were fairly continuous. One of the conditions attached to the stipend should therefore be the definite restriction of the period within which the teacher might absent himself from his *tol*. Similar observations apply in a nearly equal degree to the proposed Smriti stipend.

7. The reasons for making special provision for the teaching of Nyáya at the Revilganj Gautama Pathsala and at the Sanskrit pathsala at Puri are given in paragraphs 11, 33, and 85 of the report.

8. The second section of the Pandit's proposals relates to the award of stipends to teachers and pupils on the results of examination. This will probably be at once accepted as an eminently suitable method of encouraging Sanskrit studies over a wide area. In order to carry out this scheme, which is only touched upon, without details, in paragraph 86 of the report, it is now proposed that the Bihar system (see paragraph 14) of the subsidiary examinations leading up to the Sanskrit Title examination should be extended to the whole province. It is also proposed that these examinations should be carried out by the five local associations referred to in paragraphs 70—80 of the report, and by any others, that may hereafter be established with similar objects, and should be held annually. A certain proportion of the stipends, to be fixed from time to time in reference to the importance of each, should be allowed to the different Associations, and be by them awarded, under rules to be hereafter prescribed, to the most deserving teachers and pupils at the first and at the second examination. The stipends awarded on the results of the first examination should be tenable for two years, subject to an examination at the end of the first year for retention of the stipend. Those awarded on the results of the second examination should be tenable for three years in the case of Nyaya students, and for two years in other cases, subject again to the condition of examination for retention of stipend. The following scale of rewards is proposed:—

Stipends to pupils.

	Rs.
On the result of the first examination, 100 pupils at Rs. 2 a month each	2,400
On the results of the second examination, 30 pupils at Rs. 3 a month each, and 30 pupils at Rs. 4 a month each ...	2,520
	4,920

Rewards to teachers.	Rs.
On the results of the first examination, 20 teachers at Rs. 6 a month each, and 20 teachers at Rs. 8 a month each ...	3,360
On the results of the second examination, 15 teachers at Rs. 10 a month, and 15 teachers at Rs. 12 a month ...	3,960
	7,320

I may observe that no additional rewards are required for candidates at the Sanskrit Title examination, to which many prizes and rewards have been attached by private benefactors.

9. It will be observed that the stipends for pupils have been fixed at the rates of Rs. 2, Rs. 3, and Rs. 4 a month each. Pandit Mahes Chandra Nyáyaratna estimates the monthly expenses of a *tol* student at Nadiya, which is not an exceptionally cheap place, as follows:—

	Rs.	A.	P.
1. Rice, 20 seers	1	12	0
2. Dâl, 60 chittacks	0	5	3
3. Vegetables and fish	1	8	0
4. Mustard oil (for cooking and rubbing the body)	0	7	6
5. Salt, spices, earthen cooking vessels, &c.	0	4	0
6. Firewood	0	12	0
7. Gram and raw sugar for lunch ...	0	3	0
8. Kerosine oil for lighting	0	4	0
9. Washerman	0	2	0
10. Barber	0	1	0
	5	10	9

Some of these items seem to be susceptible of reduction; and it appears that the allowance made to the students of the *páká tol* at Nadiya, consisting of rice, *dâl*, and two pice daily, comes to about Rs. 3 a month. The Pandit, however, states that this allowance is found to be insufficient, and that the students of the *páká tol* have to beg in order to supply the deficiency. It is also alleged that whenever a subsistence allowance is made to *tol* students by associations or by individual patrons of Sanskrit learning, it is nowhere less than Rs. 4 a month. This is the rate allowed at the Mulajor *tol*, maintained by Maharaja Sir Jotindra Mohan Tagore Bahadur, at the Biswanath *tol*, maintained at Chinsurah by Babu Bhudeb Mukherji, C.I.E., at the Burdwan Maharaja's *tol*, and at the Jubilee *tol* at Berhampore.

10. The foregoing proposals regarding new expenditure may now be summarised:—

	Rs.
Three stipends to Nadiya tols, at Rs. 100, Rs. 60, and Rs. 50 ...	2,520
One stipend at Revilganj, at Rs. 40	480
Ditto at Puri, at Rs. 30	360
	3,360
Rewards to teachers	7,320
Stipends to pupils	4,920
	15,600

The present sanctioned expenditure amounts to Rs. 3,400, thus made up:—

	Rs.
Allowance to *tol* students at Nadiya at Rs. 200 a month ...	2,400
Grant to Dacca Sarasvat Samaj	500
„ to Bihar Sanskrit Sanjivan	500
	3,400

It has already been proposed (paragraph 5) that the allowance of Rs. 200 a month to the Nadiya students should be continued. The grants of Rs. 500

each made to the two local associations should, however, cease, as they will be merged in the grants to be made, if these proposals are accepted, for stipends and rewards to pupils and teachers. Hence the total expenditure would amount to Rs. 18,000 a year, or Rs. 14,600 in excess of the present expenditure. This is somewhat in excess of the amount contemplated by Government; but it may be pointed out that if only those *tols*, to the number of 761, which have been reported on by Pandit Mahes Chandra, be considered, the proposed scale provides only one stipend for a pupil to about every ten *tols* (the stipend being generally tenable for two years) and one reward for a teacher to about every twenty *tols*. This will hardly be thought an extravagant provision. I would call attention to the suggestion made in paragraph 88 of the report, that Municipalities and District Boards should be encouraged to contribute to the support of *tols*. If, as is not unlikely, a ready response should be made to that call, and if, under the stimulus of Government encouragement, private munificence should be elicited in support of the *tols*, as it was conspicuously elicited when the Sanskrit Title examination was established, it may be possible before very long to reduce the amount of any contribution that Government may now sanction. It might be sanctioned in the first instance for three years.

11. I beg, therefore, to recommend these proposals to the liberal consideration of Government. The importance of the pandit class, and the influence which it has and will probably continue to have in the control of Hindu society, seem to make it a matter of high political moment that interests so large should be entrusted to capable hands. If by any small subsidy, such as that now proposed, the threatened decadence of the class of pandits can be in any way arrested, if stronger intellects can be attracted to the *tols*, and if the former vigour of these ancient institutions can be restored, it can hardly be contested that the money will be well spent.

No. 84, dated Calcutta, the 7th September 1891.

From—Mahamahopadhyaya Mahesa Chandra Nyayaratna, c.i.e., Principal, Sanskrit College, Calcutta,

To—The Director of Public Instruction, Bengal.

In reference to your letter No. 326, dated the 16th January 1891, forwarding copy of Government letter No. 24, dated the 12th idem, on the subject of inspection of *tols* in Bengal, and containing instructions supplementary to those contained in the Government letter as to the object of the proposed inspection, I have the honour to submit the accompanying report of my inspection, which was completed by the end of May 1891, together with descriptive statements of *tols*, of Sanskrit institutions, and of examining bodies, *marked A, B, and C, respectively.

REPORT ON THE TOLS OF BENGAL, BIHAR, AND ORISSA.

1. By way of preface it seems needful that I should give a general description of *tols* and the *tol* system of instruction. The word *tol* is a word of non-Sanskrit origin, and is in use only in Bengal, where *tols* are also called *chaupádí* or *chaubádí*, from Sanskrit *chatuspáthí*, a place for teaching the four [Vedas]. *Chaupádí* is a name current likewise in North-Eastern Bihar (Mithila) and in parts of Orissa.

2. The *tol* is an institution of a peculiar character. It is a school of learning where pupils are not only taught free of charge, but are likewise lodged and boarded free.

As the name *tol* is confined to Bengal, so is the practice of lodging and boarding pupils, as a rule, confined to this province. The only departure in Bengal from this practice is to be found in the *tols* of Nadiya (Nuddea), where pupils till lately were almost universally not fed by their teachers. Certain teachers there do now feed some of their pupils, or contribute small sums towards their maintenance. It may be that the existence of a grant, formerly by the Nadiya Rajas and now by Government, for the benefit of *tol* students at Nadiya, has caused a departure from the general Bengal practice of uniting

* Not published in *Calcutta Gazette*.

free lodging and feeding with free teaching. The practice rests on *Sastric* injunctions. The *Sástras* pronounce this a duty, and make it a sin to accept remuneration for imparting instruction. Great are the sacrifices that many Pandits endure to act up to the ideal of a teacher's duties as laid down in the *Sástras*.

3. In Bihar and Orissa, generally speaking, teachers do not concern themselves with the feeding of their pupils, the only notable exception being a corner of Bihar, viz. Darbhanga, which, like the rest of Mithila, is in so many matters like Bengal. The general practice in Bihar and Orissa is for pupils to come for instruction as day-scholars to the teacher, who teaches them either in his own house, or in a temple, or in some neighbour's house, which may be more suitable for the purpose of teaching than his own.

4 Schools for instruction in Sanskrit are called *vidyálayas* or *páthsálás* in Bihar and Orissa, North-Eastern Bihar and Jajpur in Orissa, however, using the Bengal name *chaupádi*. In the Puri district of Orissa *tols* are called *chális*. The word *cháli* means a small shed. *Tol* in Bengali is a name also for the temporary habitations of Bediás (Gypsies). Taking the two words *cháli* and *tol* together, it appears that *tol* primarily meant a shed serving as a temporary habitation. A *tol* is generally located outside the limits of inhabited places, villages or towns. It consists of one or more long huts with mud or wicker walls and thatched roofs. Each hut is divided into compartments, the partitions, however, not reaching to the roof. These compartments, in which the students are quartered, are of small dimensions, generally about seven feet square, and raised banks of earth (*vedi*) within very often serve for bedsteads. The part of the compartment that is not occupied by the *vedi* is reserved for cooking and other purposes. All the pupils in a *tol*, however, do not cook for themselves. Some get their meals free at the house of the teacher. The pupils who cook their food receive free gifts of rice and other eatables from their teacher. Pupils not belonging to the same class of Brahmans as the teacher always cook for themselves. All the pupils in a *tol* are not free boarders. Some of the pupils may be local residents who attend the *tol* as day-scholars. Some pupils, again, who are not local residents, may be freely boarded by local residents. Beginners or grammar pupils generally are the pupils who are so boarded.

5. In addition to the huts that furnish quarters to the students, there is a hut called *sarasvati-mandap*, open on one side and sheltered on the other three. It measures about 20 feet × 10 feet, and is the place where the teacher teaches his pupils. The teacher takes his seat here on a mat, and the pupils take theirs on separate mats before him, some on his right, some on his left, and some also facing him, if there is no more room on the right and the left.

6. The work begins at about 7 o'clock in the morning, and continues to about noon. All the pupils being assembled together, the teacher begins with the least advanced, and gradually passes on to the most advanced. The object of this arrangement is that the more advanced pupils may have the benefit of a revision by means of the lessons of the less advanced. Pupils are dismissed as they finish their lessons. If their day's work is not finished in the morning, the teacher and the pupils resume work at about 4 in the afternoon, and continue it till dusk. In the evening, again, pupils are allowed to bring their doubts and difficulties before the teacher for solution, and at this time the teacher also questions the beginners. There is very little of classification of students in a *tol*, each pupil, generally speaking, having his own lesson. Only in occasional instances have some two or three pupils the same lesson. Not more than one book is read by a pupil at a time, and the quantity of work done each day is but moderate. This makes it possible for a single teacher to teach each day a number of pupils, each with his separate lesson. The work done, though moderate in quantity, is done in a thorough style. Verbal discussions are frequent among the pupils, and difficult points are referred to the teacher as occasion arises. Junior students again often ask senior students to carry them through the lessons they have already gone through with the teacher either that or the previous day. This is called "seeking lesson" (পাঠ চাওয়া). The help sought is readily given. Exercises in writing are unknown in a *tol*. The system of instruction and in some measure the subjects taught are the same throughout the provinces. The Bengal standard of

Sanskrit learning is, however, considerably higher than that in Bihar (Mithilá excepted) and in Orissa. In Bengal no boy begins Sanskrit without having received elementary vernacular education in some *páthsálá*. In Bihar, however, boys often begin their Sanskrit grammar or *jyotish* (astrology), and in Orissa their grammar or lexicon, with no other knowledge than that of the alphabet, and they go on learning for some time by rote alone. At the initial stage learning grammar by rote is the universal practice. The ages of pupils in Bengal range approximately from 9 to 30, in Behar from 7 to 20. and in Orissa from 6 to 18. Bihari and Uriya students who continue their studies beyond the above limits of age repair for their instruction beyond the limits of their respective provinces.

7. Teacher sand pupils in *tols* are almost all Brahmans, only a few being of the Vaidya caste. The few Vaidya teachers in the provinces teach only grammar, *belles-lettres* and rhetoric to non-medical students, and Vaidya students study none but the above subjects previous to taking up their medical studies. *Tol* students everywhere are most obedient to their teachers and respectful to their seniors. They almost worship their teachers, doing for them, if need be, menial services with the utmost alacrity. The teachers on their part love their pupils with fatherly affection.

8. In *tols* holidays are not less plentiful than in colleges in Bengal. For four days in a month, *i.e.*, on the *pratipada* (first) and *ashtami* (eighth) day of the waxing and the waning moon, all studies are prohibited. Should the *pratipada* or the *ashtamí* extend to even so small a portion of the succeeding solar day, this day would be an additional day during which study is prohibited. In four other days, viz. the two *chaturdasis*, *púrnimá*, and *amávasyá*, *i.e.*, the fourteenth and fifteenth days of the waxing and the waning moon, new lessons are forbidden. though revision of the old is not. For students of the *Nyáya* Philosophy and *Vyákaraná* (Grammar), there are two additional days, the *trayodasis* *i.e.*, the 13th day of the waxing and also of the waning moon), during which new lessons are prohibited. For six days in a month, the two *chaturthis*, the two *saptamis*, and the two *trayodasis* (*i.e.*, the fourth, seventh, and thirteenth days of the waxing and the waning moon), all study at night is prohibited. Besides the above prohibited days of study, the ordinary Hindu holidays are observed as days of "no study" (अनध्याय). In addition to the above holidays the practice used to be to close *Nyáya tols* for over four months from Ratha-yátrá to Rási-Púrnimá, *i.e.*, from about the third week of June to about the middle of November, and *Smriti tols* for about two months from Sakrotthána to Rási-Púrnimá, *i.e.*, from about the middle of September to about the middle of November. This practice, however, is not now universally adhered to, the long vacation, having been reduced in many *tols*. During the period of vacation, students study by themselves what they have previously studied with their instructor.

9. The days of prohibition of study given above are prevalent throughout Bengal. In Orissa the days of "no study" (अनध्याय) are the same as in Bengal, with the important exception that the long vacations of Bengal are unknown there. Mithilá (*i.e.*, North-Eastern Bihar) is like Orissa in this, the only difference being that revision work is allowed in the former on the 8th day both of the waxing and of the waning moon. The other districts of Behar do not strictly observe the prohibited days. In regard to the reading of the *Kávyas*, the prohibited days in Bengal are only the first and eighth days of the moon.

10. I started on my tour of inspection on the 23rd of January 1891, in accordance with the orders of the Director of Public Instruction conveyed in his letter No. 326, dated the 16th January 1891, and visited first the province of Behar. I commenced work there by conferring with the "Behar Sanskrit Sanjívan," whose energetic Secretary, Pandit Amvikádatta Vyás, furnished me with a list of *tols* that the Sanjívan considered deserving of inspection, and accompanied me, besides, on my tour in the districts of Patna and Saran. The other districts of Bihar that I visited were Gaya, Shahabad, Champaran, Tirhut, Darbhanga, Monghyr and Bhagalpur.

Bihar is ethnically divisible into three sections—the north-eastern section or Mithila, the southern section or Magadha, and the western or Bhojpurí section.

11. Sanskrit studies in Bihar are at a low level. In certain *tols* in the Darbhanga district alone is a high standard reached. Only an elementary

knowledge of either *Jyotisha* (Astrology and Astronomy) or of *Vyákarana* (Sanskrit Grammar), with a little of *Kávya* (*belles-lettres*) and less of *Purána*, it is the aim of the majority of Bihar students to acquire. In the Gautama Thompson *Páthsálá* at Gotna near Revelganj in Saran, opened lately with so much *éclat* and named after Gotama, the originator of the *Nyáya* Philosophy, there is no provision whatever for teaching *Nyáya*. *Vyákarana*, *Kávya* and *Jyotisha* are the only subjects taught.

12. The *Kávya* standard has risen visibly of late in Bihar, in consequence of the institution of the Sanskrit Title Examination and the examinations of the Sanskrit Sanjívan. A good many pupils aim at learning Astrology alone, with the object of earning their livelihood by casting horoscopes (*tippan*), indicating auspicious days for marriages, &c., and telling fortunes. Students of Astrology do not, for the most part, possess even an elementary knowledge of Sanskrit Grammar. They simply commit to memory Sanskrit texts with Sanskrit and vernacular interpretations of them. The same is the case to some extent in regard also to the other branches of study, vernacular interpretations of Sanskrit texts being learnt by heart along with the texts.

13. The Sanskrit grammatical text-books usually taught in Bihar are *Sárasvata*, *Chandriká*, and *Laghukaumudi*; a few study *Siddhánta-Kaumudi*, *Manoramá*, *Paribhásendusekhara*, *Laghusabdendusekhara*, *Vyutpattiváda*, *Mahábháshya*, *Kaiyat*, *Kastubha*, *&c.* The usual text-books in literature are *Raghuvansa*, *Kumárasambhava*, *Meghadúta*, and the text-books for the Sanskrit Title Examination.

The Astrology text-books are *Laghu*, *Játaka*, *Brihat Jatáka*, *Muhúrta-Chintámaní*, *Jaimini-Sútra*, and *Dipiká*. Some of the pupils study also the well-known mathematical works *Lilávati*, *Víjaganita* and *Rekháganíta*, and the astronomical works, *Siddhánta Siromani.*

The higher standard for literature students consists of works prescribed for the Sanskrit Title Examination in literature.

There is not much liking in Bihar for any other branches of knowledge besides Grammar and Astrology. The few who want to study Philosophy (Vedánta, Sánkhya, Mímánsa, and Nyáya), and the fewer who want to study Hindu Law, repair generally to Benares for prosecuting their studies, students of *Nyáya* only resorting to Nadiya.

The *Vedas* too are learnt, but only after a certain fashion, *i.e.*, by rote and for the purpose simply of recitations on ceremonial occasions.

14. The Sanskrit Title Examination and the subsidiary examinations held by the Bihar Sanskrit Sanjivan, have had a most beneficial effect on the state of Sanskrit education generally in Bihar. They have been steadily raising Sanskrit studies in the province from the very low level to which they had sunk. Much, however, remains yet to be done. At the Title Examination Bihar candidates have come forward indeed for titles in literature, but there have been no Bihar candidates yet for a title in any other subject.

15. Generally speaking, there is greater irregularity in the working of the *tols* in Bihar than in Bengal. This appears to be in great part owing to the greater poverty of the Bihar Pandits, which compels them to go about visiting wealthy people and receiving gifts from them, to the necessary interruption of their work of teaching. Such interruption usually takes place in the wedding seasons (from the middle of January to the middle of March, and from the middle of April to the middle of June) when the chances of receiving gifts are greater than at other periods of the year. The Bengal practice of inviting Pandits on the occasions of *Sráddha* (ceremony for the benefit of the departed soul), marriage, &c., and making presents to them on such occasions, is almost unknown in Bihar. It is not that gifts are not made to Pandits in Bihar by noblemen and other wealthy people, but such gifts, being not so systematic as they are in Bengal, afford the Bihar Pandits less help than the Bengal Pandits receive. Comparative smallness of means appears again the reason why the practice of teachers feeding their pupils is very rare in Bihar, while it is the rule in Bengal.

16. It may be mentioned here that all the Maharajas of Bihar and some of the Rajas maintain certain *tols* in their own city, paying regular salaries to Pandits, and the pupils also of some of the *tols* receive free boarding. Details about such *tols* are given in the tables marked A. Of the accuracy of the information given about the Maharaja of Betia's *tols* I cannot, however, be so

certain. At the time of my visit to Betia the Maharaja and the Pandits were all gone to Benares for religious purposes, and the Manager of the estate, Mr. Gibbon, to whom I officially applied for information, declined to give it. I gathered as much information as I could get from local residents, and the information varied as a matter of course. I have tried to make my figures and other matters approximately as correct as possible.

17. Unlike the *tols* in Bihár, the Sanskrit schools recently set up by the several Bihár associations are very regularly worked. In fact, they approach or come up to the standard of English schools in the Lower Provinces, in respect of regularity of attendance, hours of work, discipline, &c. The Bengal *tols* certainly do not in these matters approach this class of Sanskrit schools in Bihár.

18. The award of titles is a thing unknown in Bihár. In this it is quite unlike Bengal, where it has been an immemorial custom to award titles to *tol* students. Titles used to be awarded when students finished their *tol* education. Lately, however, titles have generally been given to pupils on their entering *tols* for instruction, the pupils themselves choosing their respective titles. This practice owes its origin to a disinclination on the part of the pupils to call each other by their proper names. Undeserving persons have thus come to be holders of titles, and titles have been indiscriminately given without any reference whatever to the special branch of knowledge to which the student applies himself, a student of Smriti, for instance, receiving the title of Nyáyaratna. These abuses made it a desideratum that Government should initiate an examination for the acquisition of a title. The abuse still continues, however, and I have known of instances in which students plucked at the Title Examination have been awarded titles by their Pandits.

19. The foregoing remarks about Bihár apply to the province generally. Darbhanga with Tirhut, which represents the ancient Mithilá, has long been famous in India as a seat of high intellectual culture. The Nyáya Philosophy was introduced into Nadiya from Mithila, where it was first cultivated with eminent success. The family of His Highness the Maharaja of Darbhanga, who is the head of the entire Maithil community, owed its position to success achieved in the field of intellect. The founder of the family Mahes Thákur, fourteenth ascendant from the present Maharaja, got his estate of Darbhanga as a reward for his learning. Some say that the present was one from the Emperor Akbar himself, others, that it was from Raghunandan Jhá, who is said to have received from the Emperor the title of Pandit Ráj, together with the Darbhanga estate, when it lapsed to the Emperor on its owner, Raja Sida Singh, dying heirless. Raghunandan is said to have made a gift of it to his guru (teacher), Mahes Thákur, as *guru-dakshiná* (gift to a teacher for instruction received). The Darbhanga Maharaja's family, founded by a Pandit, has always been distinguished by its patronage of Pandits. A regular system has been maintained at Darbhanga for testing the learning of Sanskrit students, and those who have passed the test have had their names recorded and have been rewarded with two *dhotis* each, as a mark of honour. A test generally takes place on the occasion of an assemblage of Pandits on the birth of a Maharaj-Kumar. The present Maharaja keeps up the family prestige well. He is himself both a Sanskrit scholar and a patron of Sanskrit learning. The amount annually expended by him towards the support of Sanskrit studies is Rs. 18,700, as per details below:—

		Rs.
1.	Salaries to Pandits	6,480
2.	Scholarships to pupils	1,020
3.	Maintenance of a Sanskrit college at Benares	6,000
4.	Maintenance of a Sanskrit school at Madhubani ...	300
5.	Maintenance of a Sanskrit páthsálá at Rahika	1,350
6.	Gifts to Pandits and pupils	3,550
	Total ...	18,700

20. The district, too, keeps up its reputation for Sanskrit learning. It has several distinguished Pandits at the present day, among whom I may mention Mahámahopádhyáyas Krishna Singh Thákur and Kanáilál Jhá and Pandits Chumman Jhá, Bechu Jhá, Chitradhara Misra, Dukha Mohan Jhá, and

Sadánanda Misra. Most of the distinguished Bihari Pandits outside the limits of Mithilá are Maithils by blood, as Pandit Visveswar Jhá of the *Chhapra Bháratesvari Páthsálá*, and Pandit Siva Nárayan Jhá of Dumraon.

21. The standard of instruction in the Darbhanga district is as high in Nyáya as that of Bengal, while it equals the Benares standard in respect of Grammar (on Pánini's system), Vedánta, Sánkhya, Mímánsá and Jyotish, subjects which are not much studied in Bengal. In Smriti or Hindu Law Mithila is behind Bengal, and so it is in Kávya. It is but recently, however, that Bengal has taken up the study of Kávya to any considerable extent.

22. The Sanskrit Title Examination or the Sanskrit Sanjivan's examinations have hardly produced any effect in Darbhanga. This, I have been informed, has in part been owing to the indisposition on the part of Sanskrit students in the district to undergo an examination in Hindi, or optionally in English, one or other of which has been made by the Sanskrit Sanjivan a compulsory subject for its examinations, and in part to the ignorance on the part of the present Pandits and their pupils of the subjects and text-books prescribed for the Title Examination. Pupils of the aided Madhubani Sanskrit Páthsálá, which is under the management of a Committee, have been the only Darbhanga candidates at the Title Examination, and the Sanjivan's examinations.

23. The Maharája of Darbhanga, at the time of my visit, was pleased to signify his desire to establish a Sanskrit College at Darbhanga, and he proposed that the place be made a centre for the Title Examination. The proposal is one which, I trust, the Government will approve and comply with.

24. Bihár, though a long way behind Bengal in respect of *tols* maintained by individual Pandits, has lately developed a new organisation for the promotion of Sanskrit studies, which has already been incidentally referred to. The Hindus of Bihár, after ages of depression, have been becoming alive again to old Hindu traditions and usages. Associations, some of them religious, have accordingly been started in several places, and these associations have made it an object to promote Sanskrit studies.

25. In my tour through Orissa, I made the list of *tols* furnished me by Babu Radhánath Ray, Joint-Inspector of Schools for the Orissa Division, my guide. Of the three districts of the division, Báleswar has no *tols*, and so I did not visit it. There are several *tols* in the Puri district, and only a few in Cuttack. The Jájpur subdivision of the latter is much unlike the rest of the province in the matter of Sanskrit learning. It has long been noted as a Sanskrit centre. Vedic ceremonies have persisted here long, there being even now two "*Agnihotri*" Bráhmans here. These two observe the "*Agnihotra*" ceremony, *i.e.*, keep the fire lighted at their birth perpetually burning, and perform the *Homa* ceremony with this fire morning and evening. This is to continue till the death of each, when, with the fire kept up, the cremation pile is to be lighted. The number of *Agnihotris* used to be much larger formerly. It has now dwindled down to two, and with the death of these two, the class is likely to disappear, for no novice has yet come forward to be initiated in the *Agnihotri* rites.

26. There is a *tol* at Dhenkanal, the capital of the Tributary State of the same name. I visited this *tol* at the request of the Orissa Commissioner and Superintendent of the Orissa Tributary Mehals, Mr. Worsley. The *tol* was founded by Maharaja Bhagirath Mahendra Bahadur, the grandfather of the present minor Maharaja, and it flourished well during the lifetime of its founder, the pupils, numbering from 40 to 50, being all lodged and boarded at the Maharaja's expense. It has now been reorganised as a school of the modern type, and made a department of the local middle English school. It labours under the disadvantage, however, of four classes having to be taught by a single Pandit. This drawback I brought to Mr. Worsley's notice. Several of the Uriya Pandits now living, got their education in the Dhenkanal *tol*.

27. In Orissa Sanskrit learning is at a lower level even than in Behar, where (Darbhanga excepted) it is low enough. A person who has read the *Shatkávya* (six poems), namely, *Raghuvansa*, *Kumára-Sambhava*, *Meghadúta*, *Sisupálabadha*, *Kirátárjuniya*, and *Naishadha*, is accounted a good Pandit. By many, Vyákaran and Amara Kosha (lexicon by Amara) are the only things learnt. Astronomy used to be successfully cultivated in Orissa, but the study of it has greatly

declined of late. There are two experts in this subject, however, in the Puri district—Chandra Sekhara Singha Hari Chandan Mahápátra Sámanta, the uncle of the Raja of Khendapárá, and Pandit Sadásiva Khariratna. The former makes observations of the stars and planets by means of native instruments. The grammar text-books usually taught are mere abridgements; at Puri, *Prakriyá Kaumudí*, based on *Pánini*; at Bhuvaneswar, *Prakriyásár*, based on *Káláp*; and in the Cuttack district, *Sáraswata*, *Chandriká*, and *Laghu Sankshiptasára*, the last being locally called *Juman*.

The standard of Sanskrit studies in the Jajpura subdivision of the district of Cuttack being higher than elsewhere in Orissa, a grammatical work of an elaborate character, namely, the *Sankshiptasára*, is taught there.

28. The institution of the Title Examination has given some impetus to the study of Sanskrit literature in Orissa. Those who obtain titles on the result of this examination are held in honour in the province, and the possession of a title is a passport also to employment in Government and private schools. The Puri and Dhenkanal Sanskrit Páthsálás alone send up candidates to the Title Examination, and *Kávya* has hitherto been the only subject taken up by the candidates. The rules in connexion with the Title Examination are little known in the province, except at Puri and Dhenkánal, and this, together with the absence of any local examinations such as exist in Bengal and Bihár, operates prejudicially in the province.

29. There are in Orissa a few learned Pandits, such as Sankar Tirthaswámí of Puri, Dámodar Vidyábágísa of Jajpur and Bámadev Misra of Bhuvaneswara. These learned Pandits finished their education outside the province, namely, in Bengal, in the Madras Presidency, and at Benares. As in Bihár, the practice of receiving titles from their teachers by students of Sanskrit does not exist in Orissa. Some few who finished their education in Bengal, such as Pítámbar Tarkasarasvatí of Jajpur, took titles. The Puri Rajas have awarded the titles of *Barápandá* and *Brahmá*. Recently some of the Tributary Rájás have begun to award titles prevalent in Bengal, namely, Vidyábágisa (awarded by the late Mahárájá of Dhenkanal to Dámodar of Jájpur) and Vidyánidhi (awarded by the Raja of Madhupura to Pandit Átmárám of Dharmasálá in the Jajpur subdivision of Cuttack.

30. There was a time when in Orissa Pandits were very liberally patronised by Maharajas and Rajas. They got numerous rent-free grants of villages, and the central parts of these villages were marked out for the exclusive residence of Brahman families devoted to the practice of religious rites or to the cultivation of Sanskrit learning. These parts are called *Sásan*, each deriving its name from its grantor, such as Bírnarasinhapur Sásan, Sripurushottampur Sásan, Bír Balabhadrapur Sásan, named from their respective grantors, Bír Narasinha, Purushottam, Bir Balabhadra, &c. Many *Sásans* exist at the present day, and what a Sásan is like, will appear from the following description. A *Sásan* has a single road, some 10 feet broad, running right through its middle. The road is lined on both sides with cocoanut groves, and at the back of these groves are the residences of the Brahman families descended from the original grantees. Within the limits of a Sásan, none but a Brahman family can reside. So strong is the force of custom, that although there is now no legal prohibition against non-Brahmans residing within the limits of a *Sásan*, no non-Brahman ever thinks of intruding within its limits. Most of the Pandits in Orissa are Sásan residents, though the number of Pandits is altogether but small. The Sásan Brahmans almost all stick to the old Brahmanic occupations. Those who are not Pandits do some kind of priestly office; they do not practise any kind of secular calling.

31. At Puri, besides the Sanskrit Páthsálá, there are *maths* and *tols*, where Sanskrit teaching is carried on. A "math" is properly a convent of monks presided over by a *Swámí* or *Mahanta*. The *Swámí* is absolute ruler of the *math* and owner of its property. *Maths* have somehow become places of instruction for students of Sanskrit. Different Hindu sects have their different *maths*. The Vaishnavas have their *maths*, and so have the followers of Sankar Achárya. The rites of each sect are observed at the *math* of the sect. Persons who ask for food at the *math* of the sect to which they belong have to be fed, and a few are even permanent guests. All beggars receive alms at a *math*.

32. In the Bálasháhi quarter of Puri there are four *maths*, each called after Sankar Achárya, *Sankara Matha*, not because Sankar Achárya ever taught in them,

or was in any way personally connected with them, but because their heads have been followers of Sankara. Of one of the *Sankar maths*, the head (Swami) is Dámodar Tírtha Swámi, the most learned Pandit of the place. This *math* has an income of about Rs. 1,000 a year derived from land. It has a valuable library of Sanskrit manuscripts in the Devanágri, Bengali, Uriya, and Telugu characters, but the library is not taken as much care of as it should be. The three other *Sankar Maths* have incomes of Rs. 10,000, Rs. 12,000, and Rs. 400 a year, respectively, all derived from land. At two of the *maths* of the Vaishnavas, namely, the Imar Math or Gopál Math and the Gangá Math, pupils are lodged and boarded free, all the pupils in the former and five in the latter. The Pandit in each receives a money remuneration besides getting free lodging and boarding.

33. The Puri Sanskrit Páthsálá is maintained by an endowment of the late Maharaj Sir Digvijay Singh Bahadur, K.C.S.I., of Balrampur in Oudh, and a subscription, originally by him, of Rs. 1,300 a year, continued since his death by his widow. The Maharaja in his deed of endowment expressed a wish for the establishment of a chair of Nyáya at the Páthsálá. The chair has not yet been created, the Managing Committee having thought it proper to limit expenditure with a view to effect savings against the ultimate cessation of the subscription of Rs. 1,300 a year. I had drawn the Committee's attention to the Maharaja's wish about a Nyáya chair, and have been informed by the Secretary that the Committee cannot open a Nyáya chair without an addition to their funds.

34. Another Sanskrit institution at Puri is the Veda Vidyálaya established only a few months ago. It is maintained by contributions in the shape of money and free meals to the pupils, who are 27 in number, all of them beginners. They read elementary grammar, and commit to memory a few *mantras* from the Vedas. A rival Vedic school of this type has just been started by Pandit Harihar Brahmá. These two institutions scarcely deserve the name of Veda Vidyálaya, and it is very doubtful whether they will live long. The first of these is the only institution in Orissa maintained by subscriptions.

35. One extraordinary feature of a few of the *tols* in the Puri district may here be mentioned. The Pandits of these *tols*, so far from teaching, lodging and boarding their pupils free, receive trifling fees of one or two or three annas a month from each of their pupils. Free lodging and boarding are exceedingly rare in the province. Generally the pupils of *tols* in Orissa belong to the village in which the *tol* is situated or to adjoining villages. Pupils in Puri town and its neighbourhood can get, if they choose, their meals free at the temple of Jagannath. Many actually do get their meals there, some walking a mile or two for the purpose. Within the courtyard of the temple there is a pavilion of stone, called *Muktimandap*, in which the Pandits of Puri meet as occasion demands, and discuss and decide points connected with the Hindu *Sástras*. Pupils on presenting themselves at the *Muktimandap* get their meals free.

36. I now come to the province of Bengal, the *tols* of which I visited last. It is the *tols* of Bengal that answer fully to the description of *tols* given in the beginning of this report, and *tol* instruction in Bengal, though declining from what is was of old, has still more vitality altogether than in the sister provinces.

37. The special branch of study for which Bengal has been famous all over India is the Nyáya Philosophy, and the chief seat of this study in Bengal has been Nadiya. Of the Nyáya Philosophy, the works that treat of Logic, such as *Máthuri*, *Jágadisi*, and *Gádádhari* have been special favourites. The study of these works is a severe training for the intellect, and students who go through this training acquire a mental grasp and alertness which enable them to master other branches of Sanskrit learning with comparative ease. The *Naiyáyika* (expert in Nyáya) is accorded a higher rank in Bengal than the Professors of any other branch of learning.

38. Besides Nyáya, the only other favourite branch of study has been *Smriti*. The original *Smritis* are not, however, the works studied, but only Raghunandan's compends of them, together with the *Dáyabhága* of Jimutabáhana with Srí-krishna's commentary, and the *Práyaschitta Viveka* and *Sraddha Viveka* of Sulpani. Raghunandan's compends of Smriti works are a very serviceable compilation, and intelligent Pandits, who have mastered them, can study without extraneous help most of the original Smriti works (*Samhitas*).

39. The grammatical works studied in Bengal are *Kalápa*, *Sankshiptasára*, *Supadma*, and *Mugahabodha*. *Pánini*, and works based on *Pánini* are not studied anywhere, with the exception only of a few *tols* in Rajshahi. In certain *tols* in East Bengal the *Kalápa* with its different commentaries is studied with the exclusive devotion that *Siddhánta Kaumudi*, which is based on *Pánini*, commands in the North-Western Provinces. The same exclusive devotion to grammar is found in Midnapur, Bankura, Birbhum, and parts of Burdwan, Hugli, and Howrah. Here the grammar text-books are *Sankshiptasára*, and Goyi Chandra's commentary on it, with commentaries on this commentary. Wherever grammar holds sway, other branches of Sanskrit learning have little room.

40. The *Purános* have also their students in Bengal, though they are but few. Astrology too is learnt for the practical purpose of casting horoscopes, and calculating auspicious days for weddings, &c.

41. The Hindu system of medicine is taught in several places in Bengal, notably in Calcutta, Mánkar (in the Burdwan district), Jangalpara (in the Hugli district), Bankul (in the Howrah district), and Bikrampur (in the Dacca district). I did not visit any of this special class of *tols* for medical education, as a proposal for including the Hindu system of medicine among the subjects for the Title Examination was disallowed, on the ground that "the encouragement of the Sanskrit system of medicine is totally opposed to the policy of Government in medico-educational matters."

42. The Title Examination, and to some extent local examinations under *Samájas*, like the Dacca Sárasvat Samáj, have been the means of introducing into Bengal the study of the Sánkhya, Pátanjala, Vedánta, and the old Nyáya Philosophy (Gautama Sutra) and of original Smriti works (Manu, Yajnvalka, &c.). The study of Kávya and Alankára (Rhetoric), which used hitherto to be for the most part confined to the Sanskrit College, has now spread widely over the province, under the influence of the above examinations. That a knowledge of these subjects helps to secure Panditships in schools has further stimulated their study in different parts of the province.

43. The renowned seats of Sanskrit learning in Bengal are Nadiyá, Bikrampur, Bakla-Chandradwip, Tribeni, Bhatpara, and Khanakul-Krishnagar. A word of explanation about the name Bakla-Chandradwip may not be inappropriate here. Raja Todar Mal, Finance Minister to the Emperor Akbar, divided the Exchequer lands of Bengal Proper into nineteen sarkárs, of which one was Bakla-Sarkar. Bakla was subdivided by him into four mahals or parganas, and one of these was called Chandradwip. This pargana appears to have been known at the time by the name of Bakla, and it is still occasionally called Bakla-Chandradwip. The name Bakla, of both pargana and sarkár, appears to have been derived from a town of this name, which was the seat of a Hindu reigning family, but of which there is at present no trace. Mr. Beveridge, from whose *District of Bakarganj* (pp. 26—34, 50, and 70) I derive my information, thinks Chandradwip was identical with Bakla, as Abul Fazl, according to Professor Blochmann, uses it as synonymous with Bakla. From early times Chandradwip belonged to a Kayastha family enjoying the title of Raja. This family, whose liberal patronage of Sanskrit learning made Bakla-Chandradwip a great centre of such learning, has now been reduced to poverty. The estate which is of such historical celebrity passed out of the hands of this family into those of several proprietors of low caste. Recently it has come into the possession of a Brahmin zemindar of distinguished rank and lineage, Raja Sir Saurindramohan Tagore, Kt., C.I.E., &c., and it may now well be hoped that he will support the cause of Sanskrit learning in Bakla-Chandradwip as the Rajas of Chandradwip used to do of old. The Raja has already given an earnest of such support by his liberal donation of Rs. 200 towards a kindred object, namely, the purchase of land for a girls' school in his newly-acquired estate.

44. In Bengal, as I have stated above, Pandits, as a rule, lodge and feed their pupils. Whence come the funds that enable them to do so? The practice of old was for zemindars to make grants in perpetuity of rent-free land to Pandits noted for their learning. It was mainly rent-free land that enabled Pandits to support their families, and bear, besides, the expense of free lodging and boarding for their pupils. The renowned Pandit Jagannath Tarkapanchánan, who was a contemporary of Sir William Jones, got such large gifts of rent-free

land that his descendants are now able to maintain themselves with the income derived from the land left by Tarkapanchánan. About 50 years ago my father, now deceased, received from the then head of the Mahishadal Raj family a grant of 100 bighas of rent-free land, and this land has come down to his heirs.

45. Grants of rent-free lands have now very much gone out of fashion, have in fact almost entirely ceased. Money contributions or gifts of rice to *tol* Pandits continue to be regularly made by some patrons of Sanskrit learning, though such instances too are but few. At present the resources of Pandits consist chiefly of gifts called *Vidáya*, received from wealthy people of good caste, at *Sráddhas*, marriages, consecration of temples and tanks, return from pilgrimages, &c. On such occasions the gifts to Pandits are usually graduated according to the class to which they belong, *i e.*, according as they are *Naiyáyikas*, *Smártas* (Professors of Law), or *Sábdikas* (Professors of grammar and language). The Naiyáyikas are considered Pandits of the first rank, the Smártas of the second, and the Sábdikas of the third. Vedantic, Sánkhya, and Pauranic Pandits are but few in Bengal. Vedantic and Sánkhya Pandits rank immediately below Naiyáyikas, and Pauranic Pandits below Smártas. Even *Vidáya* gifts have gradually been declining in value, and hence the increasing difficulty on the part of Pandits to support their pupils.

46. A new departure has been made of late by certain patrons of Sanskrit learning. They have established institutions for the prosecution of Sanskrit studies, in which the teacher or teachers receive fixed salaries and the pupils receive stipends. The following are institutions of this class:—The Sanskrit Vidyálaya, maintained by the Burdwan Raj; the Mulajor Sanskrit Vidyálaya founded by the late Babu Prasanna Kumar Tagore and now maintained by Maharaja Bahadur Sir Jotindramohan Tagore, K.C.S.I. and his brother, Raja Sir Saurindramohan Tagore, KT.,C.I.E.; the Victoria Jubilee *Tol* at Berhampur, founded and maintained by Arnakali Devi of Kasimbazar; the Krishnagar Sanskrit Vidyálaya, founded and maintained by Maharaja Khitischandra Ray of Krishnagar; and the Biswanath Pathsálá at Chinsura, founded and maintained by Babu Bhudeb Mukerjee, C.I.E. On the occasion of my visit to Maimansingh I suggested the establishment of a similar institution there, and the suggestion was warmly taken up by the local public, the lead being taken by Raja Suryakánta Achárya. The District Magistrate, Mr. Phillips, strongly supported the scheme.

47. Of the Bengal *tols*, I visited first those in Murshidabad and part of Burdwan, and this on my way back from Bihar. The Victoria Jubilee *Tol* at Berhampur is in an efficient condition. Pupils from this institution succeed every year at the Title Examination, and titles were won in Vedanta, Smriti, and Kavya at the examination last held. This *tol* has pupils from such distant districts as Maimansingh, Sylhet, Tipperah, and Chittagong, besides those who are natives of Murshidabad. No other Murshidabad *tol* besides this and that of Pandit Ramtáran Sirománi of Kándi competes at the Title Examination. The *tol* taught by Pandit Ramapati Tarkabhusan at Kasimbazar is a good one. The *tols* in the interior of the district are few in number, and, with the exception of the one at Kándi, taught by Pandit Ramtaran Siromani, are in no good condition, as reported to me by the District Deputy Inspector of Schools, Babu Phanibhusan Basu.

48. The Burdwan district has some good *tols* in the interior, and the best of these is Pandit Krishnanath Nyayapanchánan's *tol* at Purbasthali. Pandit Krishnanath is a man of great learning, and he sends up every year pupils to compete at the Title Examination. Smriti, Kávya and (in one instance) Vedánta have been the subjects taken up by his pupils.

The Maharaja's Vidyálaya in Burdwan town is an institution founded about seventy-five years ago by Maharaja Tejchandra Bahadur, and it is now in a flourishing condition. It teaches Nyáya and Kávya, and regularly sends up candidates to the Title Examination.

49. My inspection of the *tols* in parts of East Bengal was greatly facilitated by the help rendered by the Dacca Sárasvat Samáj, whose very able and energetic Secretary, Pandit Prasannachandra Vidyáratna, furnished me with a complete account of all good *tols* in Dacca and Faridpur, and of such in Maimansingh, Tipperah, Noakhali and Chittagong, and also Sylhet (now included

in Assam) as send up candidates to the Samáj's examinations. He also accompanied me in my tour of inspection, and this, as well as his account of *tols*, was a great help to me. Raja Rajnarayan Ray Bahadur of Jaydebpur kindly placed at my service his steam-launch, and so helped my inspection work greatly. The Sárasvat Samáj called a meeting of Pandits at the Samáj house, and this assemblage gave me much valuable information and offered certain suggestions.

50. Parganá Bikrampur, now divided between the districts of Dacca and Faridpur, has long been known as the chief seat of Sanskrit learning in East Bengal. Although the number of Pandits and students has now considerably diminished, Bikrampur has still more *tols* and pupils than any other part of Bengal of equal area, and Pandits here have some enthusiasm yet about their calling. One Pandit maintains a *tol* on the principle of free lodging and food to pupils, although he has been running into debt for this. He himself got his education with lodging and boarding free, and he conceives it his duty to do towards others in this matter as he has been done by.

51. The principal subjects of study in East Bengal are Nyáya, Smriti and Vyákarana. The *Kalápa Vyákarana* with its commentaries occupies many pupils for years, and some of them learn nothing besides. Many of the Nyáya and Smriti students of Bikrampur, and all such students of Bakla-Chandradwip (in Bakarganj) come to Nadiya to complete their education. As regards pupils from Bakla-Chandradwip, titles obtained by them at Nadiya and latterly also those obtained under the Title Examination are alone recognized.

52. *Tols* are not numerous in Bakarganj, Maimansingh, and Rájsháhi, and on my visits to these districts I derived much help from the local Dharma-Sabhás, which brought together Pandits and a number of pupils, too, from different parts of the districts. This rendered visits to the interior of the districts almost unnecessary, and the only place in the interior of any of these districts that I visited was Sherpur in Maimansingh. In all the three districts, Smriti and Nyáya, particularly the latter, are not studied up to anything like a high standard. In fact, the rudiments only of Nyáya are learnt. The *Kalápa Vyákarana* is the usual grammar text-book in Bakarganj and Maimansingh. In Rajshahi *Mugdhabodha* is the general text-book, but in certain *tols Panini* is taught, and in a few *Sárasvata.*

53. The districts of Rangpur and Dinajpur have never been remarkable for the cultivation of Sanskrit learning. Recently the former district has, through the efforts of its energetic Magistrate, Mr. Skrine, come to have a good *tol* under a learned Pandit, Jadabesvar Tarkaratna, in Rangpur town; and Dinajpur now has a Pandit, Mahes Chandra Chudamani, who has made himself known as the author of Sanskrit and Bengali poems. The Rangpur *tol* gets a grant of Rs. 50 a month from the District Board, a grant more liberal than any elsewhere in the Lower Provinces. The *tol* under Pandit Mahes Chandra Chudamani at Dinajpur is under the patronage of Maharaja Girija Nath Roy of Dinajpur.

54. At the time of my visit to Narail there was a large gathering of Pandits at a *Sráddha* at Itina in the Narail subdivision. The Pandits assembled were for the most part from the districts of Jessore, Khulna, and Faridpur, and from them I got much information about the condition of Sanskrit studies in the surrounding parts of the country. Nyáya and Smriti occupy almost the same place as they do in other parts of Bengal, and the grammar text-book (*Supadma*) in use in Jessore is very much like those in use elsewhere in Bengal.

55. Bhatpara, the chief seat of Sanskrit learning in the 24-Parganas, still keeps up its old reputation, though Pandits and pupils have been diminishing in number here as elsewhere in Bengal. It has still eminent Pandits, such as Mahamahopadhyaya Rakhal Das Nyayaratna, Chandra Nath Vidyaratna, Madhusudan Smritiratna, and Ramendra Nyayabagis. The study of *Kávya* has recently been taken up here with greater activity than in any other place in Bengal. One peculiarity of the Bhatpara Pandit families may here well be mentioned. Members of these families acccept no gifts from any but Brahmans, Kshatriyas and Vaisyas, and abstain entirely from animal food, differing in both these respects from the generality of Pandit families in Bengal. The Bhatpara Pandits are also the *Gurus* (spiritual preceptors) of numerous Brahman families in Bengal. Altogether they are held in high respect throughout the Province, and go by the name of Bhatpara Thákurs.

56. At Tribeni, in the Hughli district, long a famous seat of Sanskrit learning, such learning is now in decadence. Jagannath Tarkapanchanan was a native of this place, and a long train of eminent Pandits before and after him are associated with the name of Tribeni. Its one *tol* now represents the "seven or eight" that existed in 1818, as stated by Mr. Ward (Adam's Report on Vernacular education in Bengal and Behar, edited by Rev. J. Long, Calcutta, 1868, p. 40). This solitary *tol* is taught by a learned Pandit, Ambika Charan Vidyaratna, fifth in descent from Pandit Jagannath Tarkapanchanan, and with his demise the traditional reputation of Tribeni as a seat of learning will have passed away.

In the rest of the Hugli district, things are no better than at Tribeni. Khanakul-Krishnanagar, long noted as one of the most eminent seats of learning in Bengal, has but four *tols* at present, none of them in a flourishing condition. Nor do its present Pandits enjoy the reputation that their predecessors did. Pashpur and Narit, which too had for numerous generations been places of Sanskrit learning, have now both ceased to have a single *tol*.

Bansbarai with its twelve or fourteen *tols*, Bhadessur with its ten, and Gondalpara with its ten in 1818 (all according to Mr. Ward's enumeration as quoted on pages 40 and 41 of Adam's Report, Long's edition), have almost ceased to have any *tol*, there being only one good *tol* now at Bansbarai taught by Pandit Mahendranath Tarkapanchanan, and another (a nominal one) at Bhadessur.

57. What is true of Hugli is true of Midnapur. Pitpur, Bhema, Bhagdanda, Sribara, &c., old seats of learning in the latter district, have now fallen into such a condition that no visit to them was called for.

58. My account of the Bengal *tols* may fitly be closed with an account of the *tols* of Nadiya. Nadiya came to be the chief centre of Sanskrit learning ages back, *i.e.*, while it was the political capital of Bengal. Under the patronage of the Sena kings of Bengal, Hindu learning flourished in their capital, Nadiya, as it did in their earlier capital situate in Pargana Bikrampur, which, as already mentioned, is still an intellectual centre. The *tols* of Nadiya originally brought into being by royal initiative and long maintained by royal patronage, came to be maintained by Hindu zemindars after the Musalman conquest of the land. Grants of rent-free land and money gifts by Hindu zemindars and other wealthy Hindus have been diminishing in Nadiya as elsewhere in Bengal, and so *tols* and pupils in Nadiya have been growing less and less. as will appear from the following figures :—

YEAR.	No. of tols.	No. of students.	AUTHORITY.
1816	46	380	Report of the Committee of Superintendence, provisionally appointed for the College which Lord Minto proposed to establish at Nadiya (*vide* Adam's Report, p. 50).
1818	31	747	Mr. Ward—The accuracy of the number of pupils as given by Mr. Ward was doubted by Mr. Adam (*vide* Report, p. 50).
1829	25	500-600	Professor H. H. Wilson, then Junior Member and Secretary of the General Committee of Public Instruction (Adam's Report, pp. 51-52). (I applied to the Bengal Office for Professor Wilson's Report, but there was no copy found there and none either in the Office of the Home Department of the Government of India).
1864	12 (Nyáya 6, Smriti 6)	Less than 150	Professor E. B. Cowell, in his Report to the Director of Public Instruction of the 17th January 1867, p. 3).
1891 (Time of my inspection)	8 (Nyáya 4, Smriti 4)	99	

Professor Cowell in his report above referred to says, in connection with the figures in his report, that "the number of students is probably not wholly accurate, as of course no register of attendance is kept, and it was not easy to decide whether absent students were really to be counted on the rolls or not."

Mr. Ward's figure is so extraordinarily large as compared with the figure of two years back given in the Committee of Superintendence's Report that it

may be laid aside as inaccurate. Even then, Professor Wilson's figure remains as an indication of increase on the figure of 1816. But the Professor's estimate, 500 to 600, was evidently a rough one, and this from the absence of registers of attendance. It is clear, after all that, the number of *tols* has steadily declined since the first enumeration in 1816, and that the number of pupils has steadily declined since 1829.

59. Nyáya and Smriti have been the principal studies in Nadiya, particularly the former, Nadiya in fact being the first place in all India for the study of Nyáya. Although Nyáya and Smriti students at Nadiya have been declining in number, still Nadiya counts even now among its Nyáya students men from all parts of India.

60. Kávya and Vyákaran, which Nadiya Pandits hitherto disdained to teach in their *tols*, have now beguna to have special *tols* appropriated to them. There are now two *tols* for Kávya and Vyákarana, and a Smriti *tol* also has pupils for these subjects, the total number of students in the three amounting to 33. This new departure does not in any way make up for the comparative neglect of Nyáya and Smriti, but it nevertheless indicates a tendency to expansion under the influence of new forces. Kávya and Vyákarana, though shunned in *tols* as being subjects of a rather elementary character, used hitherto to be taught in schools of a peculiar class called *ákhárás* by the pupils of Nyáya and Smriti *tols*. These *ákhárás* with their pupil-teachers existed when I accompanied Professor Cowell (then Principal of the Sankrit College) in his visit to Nadiya in 1864, but when I visited the place last May I did not find even one in existence, their place being taken by regular *tols* for the teaching of Kávya and Vyákarana. Another subject has also begun to be taught in *tols*, viz., Purána, Bhágabat, Rámáyana, &c. This innovation is evidently due to the increasing strength of the Vaishnava element in the population of Nadiya. Chaitanya was a native of this place, and his followers muster strong here at present, the place being regarded by them as holy land. It is natural, therefore, that Pauranic studies, having a bearing on the tenets of *Vaishnavism* as taught by Chaitanya, should come to have regular schools of instruction in the very head-quarters of the Vaishnavas of Bengal. There are two *tols* (with 15 pupils) in Nadiya now for such studies.

61. So far as three-quarters of a century back, several of the Nadiya *tols* were aded by Government with allowances to their Pandits, and these allowances were continued to their successors in their respective *tols*. Ramchandra Vidyálankár enjoyed an annual allowance of Rs. 71 in consideration of his keeping up a *tol*, and when he died in 1813 his allowance was claimed by a person who could not sustain his claim. The allowance with arrears was, however, ultimately paid to Bholá Nath Siromani, son of Ramchandra Vidyálankár and his successor in his *tol*. In 1818 Sivanath Vidyábáchaspati obtained a continuance of his father's allowance of Rs. 90 a year with payment if arrears. In 1818 Sriram Siromani obtained an annual allowance of Rs. 36 on consideration of his keeping up a *tol* founded and endowed by the Raja of Nator. Ramjay Tarkálankar in the same year obtained a confirmation of his annual allowance of Rs. 62. For these details I am indebted, I may add, to Mr. Adam's valuable Report (section 52). I learn on enquiry made of Pandit Madhusudan Smritiratna, one of the sons of Sriram Siromani, and a Professor in the Sanskrit College, that on the demise of his father, he and his two brothers, all three being men of learning, applied without success to the District Collector for a continuance to them of their father's allowance. On what grounds the allowances to *tols* were discontinued, I have not been able to ascertain.

62. Besides the allowances to the Pandits of the Nadiya *tols* mentioned above, a subsistence allowance to the pupils has long been paid by Government. This allowance was originally of the value of 100 sicca rupees (equivalent to 104 ordinary rupees), and it was increased to Rs. 150 in 1886, on application being made by the Nadiya pupils to the then Lieutenant-Governor, Sir Rivers Thompson, and further increased to Rs. 200 in 1888 on application being made to the next Lieutenant-Governor, Sir Steuart Bayley. I transcribe below passages from the Reports of Mr. Adam and Professor Cowell which give a history of this allowance—"In 1829 the Committee of Public Instruction received orders to examine and report upon a petition to Government from certain students at Nadiya, claiming the restoration or continuance of an allowance amounting to Rs. 100 a month. The Committee deputed their Junior Member and

Secretary (Professor H. H. Wilson) and ascertained that all those students who came from places more than three days' journey from Nadiya had hitherto depended very much upon this grant from Government." (Adam's Report, page 53.)

"The Committee of Revenue found in 1784 that the Raja of Nadiya used to grant an allowance to the *Parooas* (পড়ুয়া) or Sanskrit students of the *tols*, and in 1784 they appear to a certain extent to have sanctioned an annual grant of Rs. 1,200 to this object. It was paid from the treasury of Nadiya, and distributed to the students by a person on the part of the zemindars. On the 18th May 1787 (further enquiry having been instituted), the Board of Revenue directed the Collector to continue the payment of the pension for the present and to charge the same under the head of 'Pension.' On the strength of this order it was regularly paid to the students at the rate of Rs. 100 per mensem. In 1829, at the request of the Collector of Nadiya, the Civil Auditor (April 6th) made a reference, enquiring as to the authority on which the pension was granted. The Board on the 9th June quoted their letter of the 18th May 1787, and at the same time stated thus:—'There is no mention whatever of this allowance in the accounts or correspondence relating to the decennial settlement, and if the payment has been continued without enquiring on the authority, it ought to be immediately suspended and a full explanation of the irregularity furnished by the Collector.'

"The allowance was in consequence discontinued, but a remonstrance from the Nadiya students was received with the recommendations of the Murshidabad Commissioner, dated 22nd January 1830, and was submitted to Government on the 12th February. Meanwhile the late Professor H. H. Wilson (when Junior Member and Secretary to the General Committee of Public Instruction) had visited the *tols* and reported on their state, and in a letter, dated 3rd August 1830, Government sanctioned the continuance of the pension with arrears, and the payment has continued to the present time." (Professor E. B. Cowell's Report, p. 8.)

63. The manner of distribution of the allowance among the pupils at the time of Mr. Adam's report and long afterwards was this:—

"A petty *suraf* or poddar accompanied by one of their number is deputed to receive the allowance at the Collector's Treasury. On his return he divides it among the foreign students, whose presence in the town is perfectly well known. The poddar whom Mr. Wilson saw keeps a shop for the sale of grain and supplies the students with food, advancing them occasional maintenance on the credit of their monthly allowance. They are commonly in his debt, but he is too important a personage, and the students are too numerous and, as Brahmans, too influential for him to practise any fraud upon them. The allowance, he has no doubt, is fairly distributed." The poddar, who till lately had the distribution of the allowance money in his hands, gave me the following history of the allowance:—

The allowance has come down from times antecedent to the English conquest of the country, but when or how it originated he could not say. The Collector of the district used till lately to appoint a distributor of the allowance on the nomination of the pupils, and these usually nominated some well-to-do poddar of Nadiya. So long as the distribution of the money remained in the hands of some poddar, there used to be a muster call of the pupils every Wednesday, and a pupil who was present or absent that day was accounted, respectively, present or absent all the days of the week in which that Wednesday fell. The poddar distributors, I may add, did their work without any kind of remuneration.

64. In 1888, when the allowance was increased to Rs. 200 a month, the distribution was transferred to the Education Department. Under the arrangement then made the local Sub-Inspector of Schools draws the money every month from the District Treasury, and makes it over to an officer called *Tol* Clerk, who is charged with the distribution of the money among the pupils. The *Tol* Clerk keeps a register of the pupils and distributes the money in accordance therewith. Out of the sum of Rs. 200 the *Tol* Clerk gets a remuneration of Rs. 10 a month, and the balance of Rs. 190 remains for the pupils, who out of the amount devote Rs. 4 to Pujas to Podá-Má and Bura Siva. The present *Tol* Clerk is Babu Binod Lal Goswami, 3rd master of the Nadiya Hindu School.

The conditions required to be fulfilled in order to entitle a pupil to subsistence allowance used to be as follows:—

(1) That the pupil be of the Brahman caste.
(2) That he be a student of Nyáya or Smriti.
(3) That his permanent residence be beyond a distance of 60 miles from Nadiya.

These conditions have now been modified as follows:—

(1) That the pupil be of the Brahman, Vaidya, or Bairagi caste.
(2) That he be a student of Nyáya, or Smriti, or Purána, or Kávya,—indeed of any *Sastra* except Vyakarana (Grammar).
(3) That his permanent residence be beyond a distance of five miles only from Nadiya.

65. At the time (1829) of Professor Wilson's visit to Nadiya, each pupil's share of subsistence allowance was from twelve annas to one rupee a month. The present average per head varies from Rs. 2 to Rs. 2-8. The subsistence grant from Government is now indeed double of what it was, but the greatly increased average per head under the easier requirements of the present *régime* clearly indicates a large falling off in the number of Nyáya and Smriti students.

66. Two *tols* of Nadiya deserve special notice, as having been set up—one very recently, and the other about 30 years ago—by two wealthy Hindustanis. The one founded about 30 years ago, called the *Páká Tol*, from the fact of its being, unlike *tols* in general, a brick building. It contains 28 rooms, each about 9 feet by feet, for the accommodation of pupils, and a lecture hall (*dálán*) and two litte verandahs. This elegant building, occupying with an adjoining garden about a bigha of land, was erected at the expense of Babu Babulal Agarwala, a late Hindustani merchant of Calcutta, who made a gift of it to Pandit Prasannachandra Tarkaratna, subject to the condition, as I am informed by Babu Jugal Kisor, Manager of Babulal's estate, that a Nyáya *Tol* was to be held in it. According to the wish of Babulal, the Manager makes a daily gift of half a seer of rice, two chhátaks of *dál*, and two pice besides for the purchase of other necessaries to 30 pupils. To the teacher a similar daily gift is made of rice and *dál*, together with Rs. 15 a month; and Rs. 4 a month and rice and *dál* are given to Pandit Ramkisor, an old student of the *tol*. The pupils of the *tl* are generally not natives of Bengal: they are from distant parts of India—Behar, the Punjab, Kashmir, and the Bombay and Madras Presidencies—and most of them remain in the *tol* until they complete their education. Some remain for very long periods, *e.g.*, Bansidhar Misra, of Mithila and Ramkrishna Pandit of the Punjab have been staying for about 30 years. Both of them have finished their education and teach the beginners. Both of them are bachelors, and have determined to pass the rest of their lives in the *tol* as students. One bad effect of the *páká tol* having been made a personal gift of to the late Pandit Prasannachundra Tarkaratna, has been that his sons after his demise have become owners of the *tol*, although they are not competent to teach like their father. As owners they engaged after their father's death Pandit Jadunath Sárbabhaum, a pupil of their father, to teach in the *tol*; but after a few years, in consequence of a disagreement between them and Jadunath, the latter was ousted, and Pandit Harinath Tarkasidhánta (of Navadvip) was put in his place. After the death of Harinath, they brought Pandit Durgaprasad Tarkálankar from Bikrampur to teach at the *tol*, though there was a feeling of disapprobation among the Nadiya community at this bringing in of an outsider to teach at Nadiya The other *tol*, called, in contrast with the first, the *Kánchá Tol*, is the one established by Ray Bhagwandas Bagla Bahadur, the well-known Calcutta and Rangoon merchant. The accommodation in the *páká tol* being found insufficient, Rai Bhagwan Das Bahadur purchased a piece of land in the neighbourhood of this *tol* with the object of erecting another *páká tol*. The proposed building has not yet been erected, and so the *tol* is now held in a *kánchá* (mud-built) house, the property of the late Pandit Harinath Tarkasidhánta. The Rai Bahadur gives articles of food to 20 pupils on the same scale as in the *páká tol*. Both the *páká* and the *kánchá tols* are now taught by Pandit Durgaprasad Tarkálankár on alternate days.

67. I now come to the institutions, religious and secular, managed either by local associations or by individual patrons, that have been promoting the study of Sanskrit. All these institutions, with the exception of the Maharaja of Bardwan's Sanskrit Pathsálá have been founded only of late years. Twenty of these institutions are in Bihar, five in Bengal, and one in Orissa. The Bihar Sanskrit institutions prepare students mainly for the examinations of the Behar Sanskrit Sanjívan and for the Title Examination.

68. Secular associations, such as those of Madhubani and Revelganj, make it their sole object to maintain Sanskrit schools organized like the English schools in this country. Religious associations (Dharmasabhás), such as those at Muzaffarpur and Matihari, make it one of their objects to maintain Sanskrit schools, which, too, are organized like English schools. Both classes of associations have been doing a great deal towards a revival of Sanskrit learning in Bihar. Detailed information about them is given in the enclosed tables that are marked B. Municipalities in Bihar have also been lending a helping hand towards the prosecution of Sanskrit studies by grants of money to some of the associations.

69. The following are the institutions I visited:—

In Sarun, the Bháratesvari Páthsálá, the Rivers Thompson Gautama Páthsálá, and the Maharaja's Sanskrit Institution; in Patna, the Gorehatta Sanskrit School; in Gya, the Tikaresvari Páthsálá, the Dharmasabhá Páthsálá, the Sanskrit Páthsálá, the Budh-Gaya Sanskrit Páthsálá; in Sháhábád, the Jubilee Upper Sanskrit Páthsálá; in Chumparun, the Dharmasabha School; in Mozaffarpur, the Dvija-Dharma-Bardhiní-Sabhá Páthsálá; the Dharma-Samáj Páthsálá; in Darbhanga, the Sanskrit Páthsálá, the Dharma-Samáj Páthsálá, Maharaja's Páthsálá, the Government Aided Sanskrit Páthsálá; in Bhagalpur, the Maharaja's Sanskrit Páthsálá, the Sanskrit Páthsálá (Golaghat), Chatpati Dharmasabhá Páthsálá; in Monghyr, the Árya Dharma Prachárini Sanskrit Páthsálá; in Murshidabad, the Victoria Jubilee Tol; in Burdwan, the Maharaja's Sanskrit Vidyálay; in Nadiya, the Krishnagar Sanskrit Vidyálaya; in the 24-Parganas, the Sanskrit Institution (Mulajor); in Hooghly, the Bisvanath Chatuspathí; in Cuttack the Purí Sanskrit School, and the Dhenkhanal Sanskrit Vidyálay.

Details about the constitution and working of the above institutions, the objects they propose to themselves, and the means by which these objects are attained, are given in the annexed enclosures marked B.

70. Five Examining Associations have been founded within the last thirteen years. Their functions, detailed in the enclosures marked Care on the model of the Sanskrit Title Examination. They are (1) the Dacca Sárasvat Samáj; (2) the Bihar Sanskrit Sanjíban; (3) the Boaliya Dharma Sabha; (4) the Nadiyá College of Pandits; (5) the Bhatpara Paríkshá Samáj.

71. Of these five institutions, the oldest is the Dacca Sárasvat Samáj. It was founded in September 1878, *i.e.*, within four months of the publication in the *Calcutta Gazette* of the Government of Bengal's scheme for holding the Title Examinations; and the first examination under the Samáj took place a month after the first year's Title Examination. The object of the Dacca Sarasvat Samáj is the promotion of Sanskrit learning, particularly in East Bengal. None but Pandits of East Bengal are eligible as members of this Samáj. At its examinations, held at Dacca, most of the candidates are *tol* students from East Bengal, and the rest are students of the same class from other parts of Bengal. On the result of these examinations, prizes, scholarships, and titles according to the grade of the examinations are awarded to pupils, and rewards to teachers. The Samáj further distributes gratuitously among the *tols* of East Bengal and a few also of other parts of Bengal, a Bengali weekly, called the *Sárasvat Patriká*, which discusses literary subjects as well as matters of practical interest. This paper is published at the press which the Samáj received as a free gift from Babu Raghunath Das of Dacca. The Samáj is altogether a well-organised body, with an aggregate income of Rs. 2,630 a year. Much of the success of the Samáj is due to the ability, learning, and organizing power of its Secretary, Pandit Prasannachandra Vidyáratna. The Samáj receives an annual aid of Rs. 500 from Government.

72. The end which the Bihar Sanskrit Sanjívan proposes to itself is to revise Sanskrit learning, and this end it seeks to attain by laying down courses of study and holding examinations. Its examinations are of two grades, called respectively the First and the Middle Examination; and they are held as preliminaries to the Sanskrit Title Examination, the existence of which the Sanjívan considers a sufficient ground for not holding any Title Examination of its own. All the distinguished Pandits of Bihar are members of the Sanjívan, which includes, besides, several Hindu noblemen and educated gentlemen of Bihar interested in Sanskrit learning. Its President is Dr. Martin, the Bihar Circle Inspector of Schools, and its Secretary is Pandit Ambikadatta Vyas, to whose learning, zeal, and energy, the success of the Sanjívan is largely due. The Maharajas and Rajas of Bihar are its patrons, and so are the present Lieutenant-Governor of these Provinces, the present Divisional Commissioner of Bihar, and the present Director of Public Instruction. It receives a grant of Rs. 500 a year from Government on the condition that it must raise an income of Rs. 1,200 a year from private sources. It has a funded property of Rs. 8,000 invested in Government securities, and holds besides an uninvested sum of Rs. 916, and in 1890-91 the total expenditure was only Rs. 518·4.

73. The Boáliya Dharma-Sabhá is an association established in 1879 for the promotion of the interests of the Hindu religion. In 1884 it made the encouragement of Sanskrit learning an additional object. For the latter purpose it maintains a *tol* at Boaliya and holds examinations annually, one of a higher and the other of a lower standard, the subjects of examination being Nyáya, Smriti, Vedánta. Jyotish, Ayurveda, Sáhitya, and Vyákarana. At these examinations candidates present themselves from different districts—Murshidabad, Nadiya, Pabna, Dacca, Burdwan, Birbhum, Midnapur, &c., those passing by the higher standard receiving titles and some also rewards. Candidates at the examination coming from distant places receive their travelling expenses from the Sabhá. Also selected students are, at the Sabhá's expense, sent to Benares to study the Vedánta and other systems of Philosophy there. The Sabhá also holds annually an assembly of Pandits, and makes presents to them, besides paying their travelling expenses. The Sabhá's annual income for the Bengali year 1295-96, corresponding very nearly to the official year 1889-90 was Rs. 4,168, and the expenditure Rs. 4,151.

74. At Nadiya in 1885-86 was formed a society, named in English. "The Association for the Advancement of Sanskrit Learning and the College of Pandits, Nadiya," and in Sanskrit or Bengali "Sanskrita Vidyá Vibardhiní Vidagdha Janani Sabhá," which literally means Sanskrit-learning-Promoting-Burnt-mother-Society. Podá Má (burnt mother) is the name of an image of the goddess Kálí at Nadiya, because it happened once to be burnt, and to it offerings are made by Nadiya pupils on finishing their *tol* education there. The object aimed at by the Society is stated in the printed report for the year 1889-90 to be, "the advancement of Sanskrit learning and the encouragement of Pandits and pupils engaged in the study of Sanskrit." The Society owes its existence to the efforts of a native of Nadiya, Babu Mahendranath Bhattacharya, M.A., B.L., Personal Assistant to the Excise Commissioner of Bengal. Since its establishment, Babu Mahendranath, as he informs me in reply to an enquiry made, has spent in furtherance of its objects sums varying from Rs. 700 to Rs. 850 every year, and he has also spared no pains to make it a success. Kumar Indrachandra Singh of the Paikpara Raj family is President of the Society. and since 1889-90 he has very liberally paid subscriptions and donations for carrying out the objects it has in view, his total contribution in 1889-90 amounting to Rs. 2,400, and that in 1890-91 to Rs. 2,050. Its income last year was Rs. 2,850, and the expenditure equalled the income.

75. The Society, with the high literary prestige of Nadiya at its back, and all the modern paraphernalia of Fellows, Members, Registrar, and printed Reports attending it, naturally raises large expectations. My own expectations too were large, but I am sorry to have to say that on looking into the inner working of the Society and the outcome of its work, I have been sadly disappointed. The movement lacks that essential of success—co-operation. Whatever Babu Mahendranath's personal exertions may be, and the fact of his being able to visit Nadiya only occasionally must necessarily set a limit

to them, success to his scheme can be assured only by active local co-operation. This, however, is wanting. The Maharaj family of Krishnagar have ever been patrons of the Pandit community of Nadiya. With this family the present movement appears not to have sought to connect itself. Fellows and Members, again, have not their duties defined, and they take little interest in the movement. The Joint and the Assistant Registrar, who reside in Calcutta, have not been able yet, I am informed, to attend the annual meetings of the Society, which, indeed, are its only meetings. Neither the Joint Registrar nor the Principal could inform me what the pass marks in the examinations were, the Principal in fact giving me wrong information; and I got the information only from the Registrar, who appears to be the very life and breath of the Society. Mahámahopádhyaya Bhubanmohan Vidyáratna is styled in the report "Principal of the College of Pandits," and Pandits Madhusudan Smritiratna and Krishnanath Nyáyapanchánan are styled "Professors of Smriti." As the Nadiyá *tols* are quite independent of one another, I do not exactly see what functions Mahamahopadhyaya Bhubanmohan's principalship carries with it. Again, Pandit Madhusudan being a Professor in the Calcutta Government Sanskrit College, and Pandit Krishnanath being a resident of Purbasthali, where he has his *tol*, their Professorships in the Nadiya College of Pandits must be only honorary titles, without any functions attached to them.

76. Much of the Society's business appears to be done in either a loose or a languid way. There are discrepancies between the lists of names of Fellows and office-bearers in different copies of the report for the same year (1889-90), and the abstract of accounts sent to me from Nadiya by Pandit Sarbesvar Bhattacharya (an honorary office-bearer of the Sabhá) does not tally with that furnished me by the Registrar. Nor does the number of passed students as shown in the Report agree with the number given in the tabular statement sent by Pandit Sarbesvar. The certificates given to successful examinees are not free from grammatical mistakes. The results of the examinations held during the cold weather one year are announced during the cold-weather examination season of the next year. Honorary titles, again, have been awarded, and the recipients of these are—the President, the Registrar, and the Assistant Registrar.

77. I now come to the more agreeable task of giving a description of the examinations held by the Society. These are of three ordinary grades, namely, the Preliminary, the Middle, and the Title or Final Examination, with the addition of a special Honour Examination in Nyáya. The subjects of examination are—Nyáya, Sánkhya, Vedánta, Smriti, Purana, Tantra, Yajana-grantha, Vyákarana, and Sáhitya. Although all the above subjects are fixed for the above examinations, candidates have not up to this time presented themselves for examination in them all. The subjects taken up from 1886 to 1889 have been—Nyáya, Vedánta, Smriti, Bhágabat Purána, Vyákarana and Sáhitya. The Report for 1889-90 gives the text-books for the three ordinary grades of examination, but none for the Honour Examination in Nyáya. The text-books fixed for the Title Examination in Nyáya include one work, which, I am afraid, will long prevent candidates from appearing at this examination. This work is *Bauddhádhikára*, which, as far as I know, no Pandit in Bengal has read through. It is remarked in the introduction to the Report that "none has been able to pass the Title Examination in Nyáya of the College of Pandits, Nadiyá." This is owing more to the inclusion of such a work as *Bauddhádhikára* in the Nyáya Title course of studies than to any other cause. The earlier examinations in Nyáya appear to be easy enough, for out of 12 candidates in three years, only one was plucked, 25 per cent. of the marks for each paper together with an aggregate of 33 per cent. being required for passing.

Besides the examinations held, the Society's work at its annual gatherings consists of the award of titles and money prizes to successful candidates and of rewards to teachers, discussions on questions connected with the Hindu Sástras, and the distribution of presents to all the Pandits invited, the Fellows and Members being included.

78. The Pandits of Bhatpara, headed by Mahámahopádhyaya Rakhaldas Nyáyaratna, set up an association called the "Paríkshá Samáj" in 1890. The paríkshás or examinations are of two grades, called the first and the second examinations respectively, for all subjects except only Nyáya, which has a third and a fourth examination—all subordinate to the Government Title Examin-

ation. The subjects of examination are—Nyáya, Sánkhya, Vedánta, Jyotish, Smriti, Sáhitya, and Vyákarana. All the Bhátpara Pandits are members of the Samaj, Mahámahopádhyáya Rákháldas Nyáyaratna being its President, and Pandit Panchanan Tarkaratna its Secretary. It has done me the honour of electing me Superintendent of its affairs. Not more than one examination has it held yet. The appearance, however, of so many as 45 candidates at this examination from different districts, some of the candidates being students of *Sánkhya* and *Vedánta*, promises well for the future of the Samáj's examinations. The Samáj has no fixed income at present.

79. At Barisal there is a Dharma-Sabha which makes the diffusion of a knowledge of the doctrines of Hinduism its main object. As connected with the main object, it resolved during my inspection tour in Barisal to encourage Sanskrit learning by holding different grades of examinations, the last being identical with the Government Title Examination. On the examinations being held, scholarships will be awarded to meritorious students and rewards to their teachers. Several Hindu zamindars and pleaders are members of the Sabhá, of which the Secretary is Babu Ambikacharan Guha, a leading member of the local bar.

80. All the above associations have promised co-operation in any measures that may be taken by Government for the improvement of *tols* and the encouragement of Sanskrit learning.

81. Before making my suggestions for the encouragement of Sanskrit studies in the Indian style, I think it necessary to point out the causes owing to which, as far as I can see, such studies have steadily been declining in the land. It was by means of gifts of rent-free land and of money that such studies were fostered in the past, and such gifts flowed freely from wealthy Hindus, as Hindus have always considered it to be an act of religious merit to help the teachers and learners of the Hindu Sástras. This belief hs been changing of late, and so gifts have been becoming scantier and scanier in proportion. Rise in prices has again made it impossible for Pandit teache·s to maintain themselves and family, and their pupils in the bargain, upon such income as sufficed generations ago. Pandit families at the same time have come to be a less self denying class than they used to be. The old custom of sons pursuing the calling of the father, which made Pandits' sons grow up to be Pandits, unless they happened to lack the mental power to do so, is losing its hold upon the country, and Pandits' sons are accordingly being trained up for secular callings that promise better prospects from a worldly point of view than the calling of a Pandit. Thus it is that families of Pandits in Bengal have al been tending to assimilate themselves to the other Brahman families of the province, *i.e.*, have all been tending towards secular callings that hold out prospects of pecuniary gain. Most of the best Pandits of Bengal, all the Mahámahopádhyayas without exception, have trained up or are training up their sons or grandsons for other callings than their own, have given them or are giving them, in fact, an English education. It is but natural that men should prepare their sons for such walks of life as they think would be most advantageous to them, and this is what the Pandits of Bengal have been doing. Non-Pandit Brahman families hardly ever think of training up any juvenile member at a *tol* for the career of a Pandit. Our *tols* are thus being threatened with a stoppage of supply of boys. An utter stoppage of supply is not likely to occur in the near future, but matters appear to be tending to this. The aggregate intellectual capacity of the present generation of *tol* students is lower than that of the past generation as unquestionably, I think, as the number is lower; and this deterioration in quality and decrease in number, judging from present circumstances, tend to be progressive. To arrest this decline very liberal help from individuals and from the State would be needed. The question of private help does not fall within the scope of this report, which need only discuss how and to what extent it would be desirable and practicable for the State to render help for the improvement of *tols* and the encouragment of Sanskrit studies. Regular aid to *tols* would obviously suggest itself as the most effective means of imparting new vitality to them, and aid almost all the *tols* are willing to receive, as I have ascertained by enquiry. A comprehensive system of aid would require, however, a very large annual expenditure, which the State is not prepared, I understand, to incur, and so such a system of aid is out of the question. The

tols, again, are, generally speaking, so similarly circumstanced that it is not possible to pick out some among them in every district as the fittest to receive grants. There are numerous other *tols*, besides those included in my tables, which number 761, so that selection would be most impracticable. To only a few *tols* of an exceptional character am I able, therefore, to recommend any regular aid, namely in Bengal to two Nyáya *tols* and one Smriti *tol* at Nadiyá, in Behar to the Thompson Gautama Pathsálá at Revelganj, and in Orissa to the Sanskrit Pathsálá at Puri.

82. Nadiya, as the historical centre of Sanskrit learning in the provinces and as the chief seat of the study of the Nyáya Philosophy in India, deserves exceptional treatment. Indeed, help has long been rendered by Government to the Nadiya *tols*, as shown in the foregoing part of this report. Subsistence allowance to pupils has been the chief part of this help, and a continuance of this allowance has been advocated by Professor Wilson, by Mr. Adam, and by Professor Cowell at different times. The subsistence allowance, as already stated, has been recently raised to Rs. 200 a month, and I would propose this to be supplemented by a monthly grant of Rs. 220 to the two best Nyáyá *tols* and the best Smriti *tol* of the place. The grant may be divided as follows:—

		Rs.
1.	Nyaya Tol, No. 1	100
2.	Nyaya Tol, No. 2	60
3.	Smriti Tol	60

83. Nyáya must have a decided preponderance at Nadiya for the simple reason that to the Nyáya *tols* of Nadiya come pupils from all parts of India. As regards Smriti, Nadiya attracts pupils only from Bengal. The grants I have proposed, I put at a sufficiently high figure that a position of comparative independence might be secured to the Pandits of the *tols* that receive them, and that there may be an adequate inducement to dispose them to be placed under some kind of control. As each *tol* would be under a single Pandit, the grant to the *tol* would be but a *vriiti* (allowance) to the Pandit of the *tol*. I would also propose a change in the administration of the pupils' subsistence allowance of Rs. 200 a month. The allowance is now shared by other than Nyáya and Smriti pupils, a recent innovation. I would propose that the old system of paying subsistence allowance to only Nyáya and Smriti pupils be reverted to, and this on the following grounds. Other branches of Sanskrit learning—Kávya, Vyákarana, &c., are cultivated in so many other places that any special encouragement of such studies at Nadiya is uncalled for, while special encouragement of Nyáya and Smriti studies, for which Nadiyá has been celebrated, would be most appropriate. Subsistence allowance being restricted to Nyáya and Smriti pupils, it would be possible to fix each pupil's monthly allowance at a sum that would deserve the name of subsistence allowance. I would accordingly propose that Nyáya and Smriti pupils who are not local residents should receive a monthly allowance of Rs. 4 each, with the exception however of the *Páka* and *Kánchá Tol* students, who already receive daily gifts of rice, dál, and two pice each. For these students I would propose a monthly allowance of Rs. 2 each. The present limit of Rs. 200 a month need not be exceeded.

84. I would further propose that a subsistence allowance of Rs. 25 a month be granted by Government for five Vedic pupils in Calcutta, when arrangements for instruction in the Vedas, about which certain proposals have been made, are effected. Provision for teaching the Vedas has been a long-felt want in Bengal, and practical steps are now being taken by certain Hindu gentlemen towards supplying the want. Babu Dwarakanath Pal of Bansberia has made over to Government 4 per cent. Government Promissory notes for Rs. 5,000 as an endowment fund for the promotion of Vedic studies, and his offer has been accepted by Government; and the Mohanta of Tarakeswar has offered for five years certain a monthly contribution of Rs. 30 for provision being made in the Sanskrit College for teaching the Vedas. Under the patronage of the Hon'ble Dr. Guru Das Banerji a Vedic *tol* is also going to be established in Calcutta. I do not propose any definite scheme for the distribution of the grant I propose, because there are no Vedic pupils at present in Calcutta.

85 For the Thompson Gautama Pathsálá at Revilganj, I would propose a monthly grant of Rs. 40 for provision being made for the teaching of Nyáya. The Pathsálá being named after the founder of the Nyáya Philosophy, it

would belie its name if it taught no Nyáya. For the Puri Sanskrit Pathsálá I would propose a monthly grant of Rs. 30. This sum would enable the Committee of Management to make their arrangements for instruction in Nyáya, as I am informed by the Secretary to the Committee. A Nyáya chair is a necessity at Puri, and such a chair cannot be created, I am informed by the Secretary, without an addition to the funds at the disposal of the Committee. To the other Sanskrit schools in the provinces, that are maintained by associations, I would also recommend the grant of aid, the amount being determined in accordance with the requirements and resources of each.

86. I would also propose that a system of payment by results be instituted in connection with *tols*. Payment by results might be on the lines of the system now in force in connection with the Sanskrit Title Examination, *i.e.*, on the results of examinations held, rewards to pupils and teachers, on a graduated scale, might be awarded. The examinations might be left to be conducted by local learned associations like the Dacca Sarasvat Samáj and the Behar Sanskrit Sanjívan, in accordance with principles approved by the Director of Public Instruction. Further details would have to be settled, if the proposal is accepted by Government. The first requisite for the settlement of details would be a knowledge of what sum Government is prepared to spend annually for the purpose of encouraging the *tol* system of instruction. The question of money must lie at the root of all schemes of improvement.

87. There is no local association at present in Orissa capable of undertaking examinations. Materials, both in men and money exist, however, for the formation of such an association, and from the conversation I have had with Raja Baidyanath Pandit and Babu Hariballabh Basu, of Cuttack, and certain other gentlemen on the subject, I am hopeful of an association being formed in no long time.

88. I would finally propose that Municipalities and District Boards be induced to assign a portion of the educational funds at their disposal to the support of deserving *tols* within their respective spheres. As already stated, several Municipalities do at present render help to *tols*, and a few District Boards also do the same. Considering the awakening of the Hindu mind that has been going on all around under the influence of Western knowledge, it is but reasonable to expect that hardly any Municipality or District Board would refuse to render help.

89. In conclusion. I have to thankfully bear testimony to the effective help rendered me by the Divisional Commissioners, District Magistrates, and Educational Inspecting Officers, of whom I had occasion to ask for help. My thanks are no less due to certain independent native gentlemen. In fact, wherever I sought help, help was cordially given.

MAHESA CHANDRA NYAYARATNA,

CALCUTTA, *the 7th September* 1891. *Principal, Sanskrit College.*

RESOLUTION ON THE REPORT OF THE CHEMICAL EXAMINER FOR THE YEAR 1891.

MUNICIPAL DEPARTMENT—MEDICAL.

Calcutta, the 22nd March 1892.

RESOLUTION No. 742 Med.

READ—

A letter from the Inspector-General of Civil Hospitals, No. 1665, dated 23rd February 1892, forwarding the Report of the Chemical Examiner for the year 1891.

Read also—

The report for the year 1890 and the Resolution recorded upon it.

The following table shows the general nature of the work done during the year as compared with that of the previous year:—

TABLE No. I.

Medico-legal.	1890.	1891.
Human viscera tested for poison ...	221	228
Cattle ditto ditto ...	122	118
Fowls' ditto ditto ...	4	...
Goats' ditto ditto ...	1	...
Pigs' ditto ditto ...	1	...
Pigeons' ditto ditto ...	...	5
Dogs' ditto ditto ...	...	3
Cats' ditto ditto ...	...	1
Mules' ditto ditto ..	...	1
Substances suspected to be or to contain poison, including cattle-poison	731	745
Articles tested for blood stains	158	235
Ditto for seminal stains ...	8	21
Ditto for both blood and seminal stains	29	49
Human hair	1	7
Cotton fibre	...	1
Total ...	1,276	1,414
Articles tested for purity and quality.		
Potable water	61	100
Petroleum and inflammable oils... ...	305	397
Lime-juice	38	26
Opium confiscated	28	103
Do. from the Board of Revenue, Lower Provinces	6	16
Salt	7	12
Ghee	26	39
Spirit for deleterious adulterations ...	45	53
Spirit determinations for the Collector of Customs, Calcutta	253	147
Articles for Small Arms Ammunition Factory, Dum-Dum	531	520
Articles for Fort William Arsenal ...	4	2
" Medical Store Department ...	2	1
" Telegraph ditto ...	18	6
" Commissariat ditto ...	93	74
" Army Clothing ditto ...	...	3
" Other departments	53	150
Total ...	2,746	3,063

2. There was thus an increase of 317 cases in the analytical work of the laboratory during the year, the increase in medico-legal cases being 138. Of the 228 cases in which human viscera were examined, poison was found in 99 or in 43·42 per cent. Opium was detected in 47 cases, arsenic in 24, and other poisons in 28. The Lieutenant-Governor notices that in 21 cases the original autopsy had been performed by Civil Hospital Assistants; 15 of these cases, however, came from Kuch Bihár and Assam.

3. Out of 745 articles received during the year in connection with supposed poisoning cases, traces of poison were detected in 321; the principal poisons being arsenic, found in 174 cases, aconite, found in 29, opium, in 23, and atropine, in 17. The number of supposed cattle poisoning cases in which viscera of cattle were received for examination was 118. In 77·96 per cent. of these arsenic was detected.

4. Besides analytical work, the Chemical Examiner had to report on eight technical questions referred to him by Departments under the Imperial and Bengal Governments, and eight applications for leave to file specifications for patent rights. He also verified three sets of apparatus for testing petroleum for various ports, and prepared, at the instance of the Board of Revenue, an extremely elaborate and complete set of tables of alcoholic specific gravity. It is satisfactory to observe that the number of analyses of drinking water rose from 61 to 100. The Lieutenant-Governor is anxious to encourage the collection of precise information on this subject, which exercises so direct an effect on the health of the population of Bengal. If the people who live in Municipal towns knew the true character of the water that most of them are in the habit of drinking, there would be less difficulty in getting them to interest themselves in procuring a pure supply. The attention of the Sanitary Commissioner will be drawn to this point, and he will be asked, when inspecting a municipality, to procure samples of the water in ordinary use. These will be sent to the Chemical Examiner, and the results of his examination will be published. A special paragraph should also be devoted to this subject in the Chemical Examiner's report, showing the quarters from which the other specimens of water were received and classifying the results.

The thanks of the Lieutenant-Governor are due to Dr. Warden for the good work he and his Assistants have done during the year.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 19th March 1892.

Division	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
BURDWAN DIVN.	1	Burdwan Mar. 19, '92 Kalna ... Katwa ... Raniganj ...	Nil Nil Nil Nil	Weather—getting warm. Sugarcane pressing nearly finished. Prices almost stationary. Prices of common rice— Srs. Sadar ... ... 12 to 16 per rupee. Kalna ... ... 10 to 18½ per rupee. Katwa ... ... 13½ per rupee. Raniganj ... ... 13½ per rupee.
	2	Bankura .. 19, '92	Nil	Weather—mornings cool, days hot. Pressing of sugarcane and *rabi* harvest still continues. Rain wanted. Fodder and water not sufficient. Common rice selling at 15 seers per rupee at Bankura and 16¾ seers at Vishnupur.
	3	Birbhum .. 19, '92 Rampur Hât ...	Nil Nil	Weather—warm. Nothing to report about crops. Fodder and water sufficient, though tanks and wells less full this year than at the corresponding season last year, and straw is dearer than last year. State of cattle normal. Common rice selling at from 13 to 16 seers per rupee.
	4	Midnapur ,, 19, '92	Nil	Weather—fair; becoming very hot. Indigo doing well. *Rabi* crops are being gathered. *Boro* paddy suffering from long drought. Scarcity of water in Ghatál. Prices of common rice— Srs. Sadar ... ... 13 per rupee. Contai ... ... 16 per rupee. Tamluk ... ... 13 per rupee. Ghatál ... ... $14\frac{6}{16}$ per rupee.
	5	Hooghly .. 19, '92 Serampore ... Jahánabad ...	Nil Nil Nil	Weather—seasonable. *Rabi* crop is not a good one. Sugarcane pressing in progress. No difficulty in obtaining fodder and water-supply. Prices of common rice— Srs. Sadar ... ... 10 per rupee. Serampore ... ... 12 per rupee. Jahánabad ... ... 14 per rupee.
	6	Howrah ,, 19, '92 Ulubaria ...	Nil Nil	Weather—getting warmer. *Rabi* crops suffering for want of rain. Outturn of sugarcane good. Price of common rice 12¼ to 13 seers per rupee. State of cattle satisfactory. Fodder and water-supply deteriorating.
PRESIDENCY DIVN.	7	24-Parganas ,, 22, '92	Nil	Weather—seasonable. Prospects not good. Rain much wanted. Prices stationary. Complaints of want of drinking water have been received from all the stations in Sadar. Supply of fodder sufficient. Health of cattle generally good.
	8	Nadia ,, 19, '92 Kushtia ... Meherpur ... Chuadanga ... Ranaghat ..	Nil Nil Nil Nil Nil	Weather—hot. *Rabi* crops being harvested; outturn bad. Rain wanted for sowing operations. Common rice selling at 12 seers to 13 seers 14 chitaks per rupee. Supply of fodder sufficient, but water insufficient in places. Wells are being dug.
	9	Khulna ,, 19, '92 Bágerhat .. Satkhira ...	Nil Nil Nil	Weather—very hot during day. *Boro* paddy is being sown. Rain much wanted. Price of common rice 13 to 16 seers per rupee. Fodder and water sufficient, except in some places in Mollahat.
	10	Jessore .. 19, '92 Jhenidah ... Magura ... Narail ... Bangaon .	Nil Nil Nil Nil Nil	Weather—nights and mornings cool, days hot. Rain badly wanted. *Rabi* harvest nearly over. Fodder sufficient. Water-supply insufficient in some places in the Jhenidah and Magura sub-divisions.
	11	Murshidabad ,, 19, '92	Nil	Weather—getting hotter every day. Linseed, *matar*, mustard and wheat are being harvested. Fodder and water available for cattle. Small-pox amongst cattle reported from Mirzapur in Jangipur sub-division. Coarse rice sells at 12 seers per rupee.
CHITTAGONG DIVN.	12	Chittagong ,, 19, '92	Nil	Weather—seasonable; nights somewhat cool. Rain badly wanted for vegetable crops. Prices slightly rising. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali ,, 19, '92	Nil	Weather—hot in the day, cool at night. *Rabi* crops are being harvested with poor outturn. Land is being ploughed for *aus* rice. Rain very badly wanted. Water getting scarce all over the district, especially in the islands. Fodder sufficient. Common rice sells at 13¼ seers per rupee.
	14	Tippera .. 19, '92	Nil	Weather—hot. Prospects of crops fair, but rain wanted. No cattle-disease. Fodder sufficient.
	15	Chittagong Hill Tracts. ,, 17, '92	Nil	Weather—unseasonably cold from evening to morning, and very hot during midday. Vegetables not doing well for want of rain. Gathering of chillies continues. Preparation of plough land going on. Transplanting of sugarcane almost over. *Jum* cutting continues. Cattle-disease still prevailing in some places. Common rice is being sold at 11 seers 2¼ chitaks per rupee.

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—concld.				
DACCA DIVN. 16	Dacca	Mar. 19, '92	Nil	Weather—seasonable. Harvesting of *rabi* crops nearly completed; prospects fair. *Cheena, kaon*, and *boro* paddy thriving. Ploughing of land for jute and rice going on. Sowing of rice commenced, but rain wanted. Fodder available. Common rice selling at from 12 to 16 seers per rupee. Condition of cattle generally good.
17	Faridpur	" 19, '92	Nil	Weather—hot with high south-west winds. State of crops generally fair, but rain wanted for *jali* paddy, &c. Rice selling at 14 seers per rupee at Sadar and Goalundo, and at 14½ seers at Madaripur. No cattle-disease and no want of fodder.
18	Backergunge	" 19, '92	Nil	Weather—hot in the day and cool at night, with foggy mornings. State and prospects of crops fair. Rain is much needed. Ordinary rice selling at from 10 to 14 seers per rupee. Fodder and water sufficient.
19	Mymensingh	" 19, '92	Nil	Weather—hot. Rain wanted for *boro* paddy and other standing crops. Common rice sells at from 13 to 17 seers per rupee. Some insufficiency of water in Kishoreganj. Condition of cattle good.
RAJSHAHYE DIVN. 20	Dinajpur	" 19, '92	Nil	Weather—dry and hot. Rain urgently wanted for the cultivation of lands for *bhadoi* and jute. Ploughing still going on in some places. Price of rice at Sadar 12 to 12½ seers per rupee, that at Thakurgaon unchanged. Condition of cattle good. Supply of fodder and drinking water fair.
	Thakurgaon	...	Nil	
21	Rajshahi	" 19, '92	Nil	Weather—seasonable; getting warmer every day. Rain very badly wanted for cultivation of land for *bhadoi* and jute. Ploughing going on where possible. Health of cattle good. Fodder plentiful. Water scanty only in Nowgong sub-division. Common rice selling at from 11 to 15½ seers per rupee.
	Nator	..	Nil	
	Nowgong	...	Nil	
22	Rangpur	" 19, '92	Nil	Weather—getting warmer. Prospects unfavourable. Rain is much needed for sowing *aus* rice and jute. Price of common rice 10 to 12 seers per rupee. Fodder sufficient.
	Gaibanda	...	Nil	
	Nilphamari	...	Nil	
	Kurigaon	...	Nil	
23	Bogra	" 19, '92	Nil	Weather—hot, fine and dry, with varying winds. State and prospects of the few standing crops are moderate. Rain much wanted for the grass, and for helping ploughing. No scarcity of water or fodder reported. Common rice selling on the average at 13 seers a rupee: the price varies from 10 seers 2 chitaks to 14 seers 12 chitaks per rupee.
	Sherpur	...	Nil	
	Naukhilla	...	Nil	
24	Pabna	" 19, '92	Nil	Weather—seasonable; nights cold, days hot. Rain very much wanted for ploughing. Price of common rice varies from 12 to 13 seers per rupee. Fodder and water sufficient.
25	Darjeeling	" 19, '92	Nil	Weather—fair. Tobacco and wheat suffering for want of rain in some places in Terai. Ploughing going on. Barley and wheat progressing favourably. Fodder getting scarce in Terai. Water sufficient. Some cases of cow-pox in the hills.
26	Jalpaiguri	" 19, '92	Nil	Weather—getting hotter every day. Rain much wanted. Cultivation still going on for *bitri* or *bhadoi*. *Rabi* crop is being harvested. Rice is being sold at from 8 to 10 seers per rupee. No cattle-disease. Fodder and water still sufficient.
BEHAR.				
BHAGULPORE DIVN. 27	Monghyr	" 19, '92	Nil	Weather—hot in afternoon with west wind. *Rabi* being harvested. Poppy, mango, and *mahua* slightly damaged by west wind. Rain wanted soon for sowing. Price of coarse rice 10 to 14 seers per rupee. Fodder and water sufficient, and condition of cattle good.
	Begusarai	...	Nil	
	Jamui	.	Nil	
28	Bhagalpur	" 19, '92	Nil	Weather—days hot, nights still pleasant. Reaping of *rabi* crops going on. Linseed outturn expected to be 4 annas. Ploughing continues, but want of rain is felt. West wind has injured mango crop and *mahua* blossoms. Fodder still sufficient. Water low.
29	Purnea	" 19, '92	Nil	Weather—warm for the time of year. Harvesting of tobacco nearly finished and a good deal of the crop has come into the market. Sowing of *kauni*, *cheena* and *mung* continues as does the ploughing for *bhadoi*. Rain wanted for the latter and indigo. No cattle-disease or want of fodder or water. Prices of common rice— Srs. Sadar ... ... 11 to 12 } per rupee. Kishanganj ... ... 10 } Araria ... . 13 }
	Kishanganj	...	Nil	
	Araria	...	Nil	
30	Malda	" 19, '92	Nil	Weather—getting warmer every day, with westerly winds. Reaping of *rabi* crops in full progress. *Boro* paddy thriving and its condition is generally fair. Supply of fodder and water sufficient. No cattle-disease. Coarse rice sells at from 10 to 13 seers 5 chitaks a rupee.
	Chanchal	...	Nil	
	Shibganj	...	Nil	
	Gajol	...	Nil	
31	Sonthal Pergunnas	" 19, '92	Nil	Weather—hot with west winds by day, cool at night. Wheat harvest begun. Prospect of mangoes good. *Mahua* promising; beginning to drop. Price of rice varies from 11 to 14 seers per rupee. Fodder sufficient. Water reservoirs drying.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—*concld.*				
PATNA DIVISION.	32	Patna Mar. 19, '92	Nil	Weather—getting hotter. Strong west winds prevailing. *Rabi* harvest in progress. Opium gathering almost finished. Prices of food-grains almost stationary. Common rice selling at from 12 to 14 seers per rupee.
	33	Gaya " 19, '92 Jahánabad ... Aurungabad ... Nawáda ...	Nil Nil Nil Nil	Weather—growing hot with high west winds. Reaping and threshing of *rabi* crops going on. Extraction of opium finished. Prices of food-grains rising. Supply of fodder and water yet sufficient, except in some villages of the Aurangabad sub-division.
	34	Shahabad " 19, '92 Buxar ... Bhabhua ... Sasarám ...	Nil Nil Nil Nil	Weather—very hot. West wind. *Rabi* harvest nearly finished; outturn fair. Prices of wheat, gram, and other *rabi* crops have fallen in Bhabhua. General condition of people good. Fodder for cattle sufficient.
	35	Darbhanga " 19, '92	Nil	Weather—days hot, nights still cool. *Rabi* still being harvested. Paddy and *mung* are being sown in low lands. Prices of food-grains slightly rising. Fodder and water getting scarce in places.
	36	Muzaffarpur " 19, '92 Sitamarhi ... Hajipur ...	Nil Nil Nil	Weather—hot with west winds. *Rabi* harvest progressing. Indigo sowings completed. Lands are being prepared for next crops, and sowings of *mung* and paddy being made in places. Prices on the whole steady with a slight tendency to rise. 1,500 to 1,600 persons employed on relief works. Demand for work increasing, but otherwise no complaints. Fodder and water sufficient.
	37	Saran " 19, '92	Nil	Weather—hot and seasonable. West winds continue, but less strong than in last week. Harvesting of all *rabi* crops in full progress. Poppy has suffered from the west winds. Rain wanted for indigo. Fodder and water sufficient. Prices of common rice— Srs. ch. Chapra ... ... 12 8 } per rupee. Siwán ... ... 13 12 } per rupee. Gopalganj ... ... 13 6 } per rupee.
	38	Champaran " 19, '92	Nil	Weather—days growing hot, nights and early mornings cool. Harvesting of *rabi* proceeding. Extraction of opium in progress. *Cheena*, &c., are being sown. Indigo germinated is doing well. Prices steady. Fodder and water plentiful.
ORISSA.				
ORISSA DIVN.	39	Cuttack " 19, '92	Nil	Weather—hot and dry with cold mornings. *Dalua* crop in ear. Rain much wanted. Fodder-supply sufficient. Rice sells at from 12 seers 8 chitaks to 18 seers 6 chitaks per rupee.
	40	Puri " 17, '92	Nil	Weather—seasonable. Land being ploughed in places for next *sarad* crop. *Dalua* paddy ripening. Miscellaneous crops doing well. Common rice sells at from 12¼ to 16 seers per rupee.
	41	Balasore " 19, '92	Nil	Weather—dry, but cool for the time of year. Outturn of sugarcane about 15 annas. Rain much wanted. Common rice selling at from 15 to 18 seers per rupee.
CHOTA NAGPORE.				
South-West Frontier Agency.				
CHOTA NAGPORE DIVN.	42	Hazáribágh Mar. 19, '92 Giridih ...	Nil Nil	Weather—warm with west winds. *Rabi* crops being harvested; poor outturn. Prospects of *mahua* and mango continue good. Common rice selling at from 12 to 14 seers per rupee. Water and fodder sufficient in most places.
	43	Lohardaga " 19, '92	Nil	Weather—getting hot. Ploughing stopped for want of moisture. Prospect of mangoes favourable. Common rice selling at 13 seers per rupee. Fodder and water sufficient.
	44	Palámau " 18, '92	Nil	Weather—hot and sometimes stormy. Harvesting of *rabi* crops progressing; outturn will be very poor. Sugarcane doing well. *Mahua* crop promises to be excellent. Common rice selling at 14 seers per rupee. Fodder getting short, though water-supply yet sufficient.
	45	Singhbhum " 19, '92	Nil	Weather—getting very hot. *Rahar*, gram, *khesari*, *masuri*, wheat and linseed are being harvested. Price of rice stationary.
	46	Manbhum " 19, '92 Gobindpur ...	Nil Nil	Weather—hot and dry. *Mahua* prospects excellent. Mango crop not so promising. Rain badly wanted. Sugarcane crop has this year been very good indeed. Prices steady. Fodder and water-supply (especially latter) getting scarce.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last . A clear sky is denoted by 0 and an overcast sky by 10. The numbers

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100.

are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 19th of March 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District observations. Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th October 1891. Mean for district.	Since 16th October 1891. Normal mean.	Since 16th October 1891. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

ten years. The variations are *negative* when the mean of the week is less than the corresponding normal mean, and *positive* when greater denoting cloud amount represents the part of the sky covered the whole sky being denoted by 10. Under the head District observations of rainfall the normal means past ten years. The means of the district are the numerical average of the rainfall return received in the district, *i.e.*, from total rainfall at the sub-divisional

Explanation.— .. indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 22nd March* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 19TH OF MARCH 1892.

FINE settled weather of almost hot weather type prevailed at the close of the previous week, and during the week under review these hot weather conditions appear to have become completely established. The changes in meteorological conditions which have occurred from day to day have, however, been generally small and of little importance. On the 13th pressure had fallen very slowly, and was below the normal by amounts which ranged up to about 0·15" in the north-east of the province. The temperature and humidity changes were a little variable, and temperature was generally about one or two degrees above the normal, and winds were westerly or west-south-westerly at all stations except in the extreme east of the province. The changes of pressure on the 14th were small and irregular, but on the 15th pressure fell; on the 16th there was a slight rise, and on the 17th a corresponding fall, which was succeeded on the 18th and 19th by a slight rise. The changes of pressure during the week have therefore only been of the slight oscillatory character which accompany fine weather. Temperature, on the other hand, has been almost steadily increasing, the increase on the 14th generally averaging from 1° to 2°, while on the 16th it equalled from 2° to 4° and so on, so that at the close of the week the mean temperature of the province was generally from 4° to 6° above the normal, and at such stations as Arrah, Buxar, Dehri and Ranchi, the excess was from about 8° to 9°. Winds during the week have also been strongly westerly, though towards its close the southerly element rather increased in force, and on the 19th winds generally varied in direction from southerly to westerly, while fairly strong winds were also setting in at the southern and western stations. During the week with the westerly winds which have been blowing, humidity has been particularly low over a large part of the province, and at such stations as Midnapore, Burdwan, Raniganj, Bankura, &c., the average percentage of saturation has only equalled a little more than 30 per cent. The skies have also been almost cloudless for the greater part of the week, and again not a single station in the province has reported any rain.

Pressure—Has been low throughout the week, and over the greater part of the province the mean pressure has been in defect of the normal by more than a tenth of an inch, the defect at many stations, particularly in the north of the province, ranging up to 0·12" to 0·13". The defect has, however, been smallest in Orissa and parts of Chota Nagpur, where it does not much exceed 0·07."

Temperature—Has risen steadily almost throughout the week, and at its close had become particularly high. The mean temperature for the whole province for the week has been about two and-a-half degrees in excess of the normal, while in East Bengal, South Bihár, and Chota Nagpur the excess has been larger than three degrees. Some very high maximum temperatures for the season have occurred during the week; thus Midnapore on the 19th registered 105·4°, Cuttack on the 18th and 19th 103·4°, and Chaibassa, Bankura, Raniganj, and Burdwan also on the 19th below 103° and 104°, while several other stations reported temperatures of 101° and 102°.

The distribution of temperature over the province and its variation for the week are most clearly seen in the table below, where the average maximum, minimum and mean temperatures for the period at nine typical stations in different districts are compared with their normal values. It will be seen that the variation has been to a great extent confined to the day temperature, for the maximum temperatures at several stations have been 5° and 6° in excess of the normal, while the night or minimum temperatures have been nearly normal:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 19th March 1892.

	Normal mean maximum temperature for the week ending 19th March.	Actual mean maximum temperature for the week ending 19th March 1892.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 19th March.	Actual mean minimum temperature for the week ending 19th March 1892.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 19th March.	Actual mean daily temperature for the week ending 19th March 1892.	Variation of actual mean from the normal.

The average fall of the corresponding period for 24 years, S.-G.'s Office ...	2·41

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; ⏶, dew.

C. LITTLE,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

CONTENTS.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 26th March 1892.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
Burdwan Divn.	1	Burdwan Mar. 26, '92 Kalna ... Katwa ... Raniganj ...	Nil Nil Nil Nil	Weather—getting warm. Pressing of sugarcane still going on. Scarcity of water felt in places. Prices of common rice:— Srs. Sadar ... ... 12 to 16 Kalna ... ... 10 to 13¼ Katwa ... ... 13¼ Raniganj ... ... 13 per rupee.
	2	Bankura .. 26, '92	Nil	Weather—days hot, nights cool. Rain wanted for ploughing. Fields are being manured for rice and sugarcane. *Khasla til* is being sown. Straw is selling at 6 *pans* per rupee. Supply of water insufficient. Common rice selling at 15 seers per rupee at Bankura and at 16½ seers at Vishnupur.
	3	Birbhum .. 26, '92 Rampur Hât ...	Nil Nil	Weather—warm. Nothing to report about crops. Fodder and water sufficient. Condition of cattle normal. Common rice selling at from 13½ to 16 seers per rupee.
	4	Midnapore .. 26, '92	Nil	Weather—becoming very hot. *Rabi* crops being gathered. In Ghatál there is some scarcity of water. Prices of common rice:— Srs. Sadar ... ... 13 Contai ... ... 16 Tamluk ... ... 13 Ghatál ... . 14½ per rupee.
	5	Hooghly .. 26, '92 Serampore . Jahánabad ...	Nil Nil Nil	Weather—rather warm during the day, cool at night. No crops on the ground. Scarcity of water complained of in Sadar and Serampore subdivisions. This evil is well within the power of the community to deal with, as water can be obtained by a trifling expenditure of labour which the people must be forced to make. No difficulty in obtaining fodder and water-supply for cattle Prices of common rice:— Srs. Sadar ... ... 11 Serampore ... . 12 Jahánabad ... ... 13 per rupee.
	6	Howrah .. 26, '92 Ulubaria ...	Nil Nil	Weather—hot. Prospects of *rabi* crops poor. Rain wanted for cultivation of lands for early rice and jute. Price of common rice 12½ to 13 seers per rupee. Fodder and water-supply diminishing. Health of cattle satisfactory.
Presidency Divn.	7	24-Parganas „ 29, '92	Nil	Weather seasonable. Prospects unchanged. Rain much wanted. Supply of fodder sufficient. Water insufficient in thána Haroa and at Chaital in thána Hushanabad. Prices stationary. Health of cattle generally good.
	8	Nadia „ 26, '92 Kushtia ... Meherpur ... Chuadanga ... Ranaghat ...	Nil Nil Nil Nil Nil	Weather—warm. Rain urgently needed for ploughing. October sowings of indigo withering. Common rice selling at from 11 to 13 seers 14 chitaks per rupee. Fodder as yet sufficient, but water becoming scarce in places.
	9	Khulna „ 26, '92 Bágerhat ... Satkhira ...	Nil Nil Nil	Weather—hot. *Boro* in low land doing well; but in high land drying up. Rain much wanted in all places. Prices of common rice from 11 to 16 seers per rupee. Supply of fodder sufficient; but inconvenience is being felt in some places for want of drinking water for men and cattle.
	10	Jessore .. 26, '92 Jhenida .. Magura ... Narail ... Bangaon ...	Nil Nil Nil Nil Nil	Weather—nights and mornings cool, days very hot. Rain badly wanted. Agricultural operations at a standstill. Fodder sufficient. Cattle-disease reported from Harinakundu outpost of the Jhenidah subdivision. Supply of water generally insufficient.
	11	Murshidabad „ 28, '92	Nil	Weather hot, nights seasonably cool. Harvesting of *rabi* crops still going on. Prospects of standing crops not good. Rain badly wanted. No want of fodder or water for cattle. Small-pox amongst cattle reported from Jangipur is gradually disappearing. Course rice sells at 11 seers per rupee.
Chittagong Divn.	12	Chittagong ...	...	Report not received.
	13	Noakhali ...	...	Report not received.
	14	Tippera ..	...	Report not received.
	15	Chittagong Hill Tracts. ...	...	Report not received.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*					
DACCA DIVN.	16	Dacca	Mar. 26, '92	Nil	Weather—seasonable. Harvesting of *rabi* crops completed; prospects fair. *Cheena, kaon,* and *boro* paddy thriving. In some parts *cheena* is being gathered. Ploughing of land for jute and rice going on, but sowing is stopped for want of rain. Fodder available. Common rice selling at from 12 to 16 seers per rupee. Condition of cattle generally good.
	17	Faridpur	,, 26, '92	Nil	Weather—very hot for the time of year. State of standing crops fair, but rain is badly wanted to allow jute and paddy to be sown. Rice selling at 14 seers per rupee at Sadar and Goalundo, and at 14½ seers at Madaripur. No cattle-disease and no want of fodder reported, but the country is unusually dry.
	18	Backergunge	,, 26, '92	Nil	Weather—hot in the day, cool at night. State and prospects of crops unsatisfactory. Rain much wanted. Ordinary rice sells at from 10 to 14 seers a rupee. Fodder and water sufficient.
	19	Mymensingh	,, 26, '92	Nil	Weather—hot and dry. Prospect of *boro* crop not good. Supply of water and fodder sufficient except in Netrokona and Kishoreganj subdivisions. Common rice sells at from 13 to 16 seers a rupee. Condition of cattle good.
RAJSHAHI DIVN.	20	Dinajpur Thakurgaon	,, 26, '92 ...	Nil Nil	Weather—westerly wind changed to easterly wind. Mornings cloudy since the 24th. Rain very badly wanted for cultivation of land for *bhadoi* and jute. Ploughing still going on in some places. Price of rice at Sadar 12 seers per rupee; that at Thakurgaon stationary. Condition of cattle good. Supply of fodder and drinking water fair. Collector telegraphs under date 28th instant:—"Good rain here and Raiganj. More expected. Seemingly well distributed."
	21	Rajshahi Nator Nowgong	,, 26, '92	Nil Nil Nil	Weather—very dry and getting very hot. Ploughing is greatly impeded generally throughout the district for want of rain. In the Barind particularly, and in other places also, there is scarcity of good water; cattle also in the Barind have insufficient fodder. The cold-weather crops now being harvested are giving a poor return. Mango crop promises well. Average price of rice 12 seers per rupee.
	22	Rangpur Gaibanda Kurigaon Nilphamari	,, 26, '92	Nil Nil Nil Nil	Weather—getting warmer. Nights still fairly cool. Prospects unchanged. Rain badly wanted. Price of common rice 10 to 12 seers per rupee. Fodder sufficient.
	23	Bogra	,, 26, '92	2·46	Weather—very hot; fine and dry until the afternoon of the 25th, when 2·46 inches of rain fell. Some hail also fell, but no damage is yet reported. The rain has done very great good in softening the ground, and ploughing will now go on rapidly. The *aus* rice and jute crops will be greatly benefited; grass will be plentiful, and the late *rabi* crops will also be improved. Common rice is selling on the average at 13 seers a rupee.
	24	Pabna	,, 26, 92	0·03	Weather—cool at night and hot during day. Drizzling rain yesterday (25th). Ploughing and sowing delayed for want of rain. Price of common rice between 12 and 13 seers. Fodder and water sufficient. No cattle-disease.
	25	Darjeeling	,, 26, 92	0·47	Weather—fair. Tobacco and wheat being harvested. *Bhutta* and barley being sown in the hills. Rain is much needed both in the hills and Terai. Fodder burning up for want of rain. Water getting low. No cattle-disease.
	26	Jalpaiguri	,, 26, '92	Nil	Weather—hot during day and cloudy in the morning and evening towards latter part of the week. Ploughing still continues for *bhadoi* and jute; sowing could not be commenced for want of rain. Common rice is being sold at from 8 to 10 seers per rupee. No cattle-disease or want of fodder or water.
BEHAR.					
BHÁGALPUR DIVN.	27	Monghyr Begusarai Jamui	,, 26, '92	Nil Nil Nil	Weather—very warm. *Rabi* crops harvested. Rain wanted.
	28	Bhágalpur	,, 26, '92	Nil	Heat seasonable. Wind gone round to east, but no sign of rain. *Rabi* harvest in progress earlier than usual. Ploughing going on where possible. Rain much wanted for this. Mango blossoms ruined by west winds. Show of fruit perhaps 4 annas. *Mahua* less injured; may yield 10 annas. Fodder getting scarce and water low, but cattle healthy. Common rice—old 10 seers 1 chitak, new 11 seers 6 chitaks per rupee.
	29	Purnea Kishanganj Araria	,, 26, '92	Nil Nil Nil	Weather—hot and strong east wind. Ploughing continues. *Rabi* nearly all harvested. Rain much wanted for *bhadoi, cheena, kauni, mung,* and indigo. No cattle-disease or actual want of fodder and water. Prices of common rice:— Srs. Sadar ... ... 11 to 12½ } per rupee. Kishanganj ... ... 10 } Araria ... ... 13 }
	30	Malda	,, 26, '92	Nil	Weather—hot and dry. Reaping of *rabi* crops progressing. *Boro* paddy being irrigated in some places. Fodder and water plentiful. No cattle-disease. Coarse rice selling at from 10 to 13 seers a rupee.
	31	Sonthal Parganas	,, 26, 92	Nil	Weather—generally hot with west winds; at Dumka clouding up and muggy with east winds. Want of rain is injuring indigo and mangoes. Sugarcane also suffers. On diára *rabi* yields 8 to 10 annas. Price of rice varies from 11 to 14 seers per rupee. Fodder sufficient. Water deficient.

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—*concld.*				
PATNA DIVISION.				
32	Patna	Mar. 26, '92	Nil	Weather—unseasonably hot during the day, though slightly cool at night. All *rabi* crops, poppy and tobacco have been cut. Lands are being prepared for *cheena* and *bhadoi* crops; rain would be beneficial for this. Price of common rice varies from 12 to 14 seers per rupee. Prices slightly rising in Barh.
33	Gaya	„ 26, '92	Nil	Weather—hot. Harvesting of *rabi* still continues. Opium has been collected. Prices of food-grains stationary. Supply of fodder and water yet sufficient except in some villages of Aurangabad subdivision.
	Nawáda	...	Nil	
	Jahánabad	...	Nil	
	Aurangabad	...	Nil	
34	Shahabad	„ 26, '92	Nil	Weather—very hot; west winds have changed to east during the week. Harvesting of *rabi* nearly over, and the crops are being threshed. Prices show a tendency to fall except at Buxar, where they are said to be rising. Sugar-cane is being planted.
	Buxar	...	Nil	
	Bhabhua	...	Nil	
	Sasarám	..	Nil	
35	Darbhanga	„ 26, '92	Nil	Weather—hotter than usual for time of year. *Rabi* still being harvested. Prospects unchanged. Condition of cattle still good, but water scarce in places. Price of rice from 12 to 14 seers a rupee.
36	Muzaffarpur	„ 26, '92	Nil	Weather—hot with strong west winds until 24th, when the wind veered round to east. *Rabi* harvest still going on. Outturn varies in places from 2 to 8 annas. *Mung, dhan,* and *cheena* sowings progressing but sparsely owing to drought. Demand for work increasing and new relief works being opened; otherwise no complaints. Supply of fodder sufficient. Price of common rice 12 to 14 seers per rupee.
	Sitamarhi	...	Nil	
	Hajipur	...	Nil	
37	Saran	„ 26, '92	Nil	Weather—hot and seasonable. West winds till the last two days, when it changed to east. Harvesting of *rabi* crops going on. Four annas of the poppy destroyed by the west winds. Indigo burning up for want of rain. Fodder and water sufficient. Prices of common rice:— Chapra ... ... 12 Srs. 8 Ch.; Siwán ... ... 13 Srs. 12 Ch. per rupee.
38	Champaran	„ 26, '92	Nil	Weather—hot. East and west wind prevailing. *Rabi* harvest in progress; general outturn estimated at 6 to 8 annas. Opium collections are going on. Indigo sowings are coming up only moderately. Common rice is being sold at from 13 to 14 seers per rupee. Cattle are in good condition. Fodder and water plentiful.
ORISSA.				
ORISSA DIVN.				
39	Cuttack	„ 26, '92	Nil	Weather—seasonable: warm. *Dalua* crop ripening. Rain wanted. Fodder-supply sufficient. Rice sells at from 11 seers 13 chitaks to 18 seers per rupee.
40	Puri	„ 24, '92	Nil	Weather—seasonable. Land is being ploughed in places for next *sarad* crop. *Dalua* paddy ripening. Miscellaneous crops doing well. Common rice sells at from 10 to 16 seers per rupee.
41	Balasore	„ 26, '92	Nil	Weather—nights still cool, but days hot. Rain is very much wanted to enable the raiyats to begin ploughing. Prices high everywhere owing to excessive export. Common rice sells at 15 seers a rupee.
CHOTA NAGPUR.				
CHOTA NAGPUR DIVN.				
South-West Frontier Agency.				
42	Hazáribágh	Mar. 26, '92	Nil	Weather—hot with west winds. *Rabi* crops are being harvested with indiffierent outturn. *Mahua* yeilding well. Prospect of mango good. Water and fodder sufficient in most places.
	Giridih	...	Nil	
43	Lohardaga	„ 26, '92	Nil	Weather—getting hot day by day. Ploughing stopped for want of moisture. Mango blossoms withering. Common rice selling at 13 seers per rupee. Fodder and water sufficient.
44	Palámau	„ 25, '92	Nil	Weather—getting hot. Harvesting of *rabi* crops continues; outturn estimated at 4 to 6 annas. *Mahua* and mango promising well. Cattle-disease reported from Untari, Mohudaur, Pattan, Chatterpur, and Latehar. Price of common rice stationary. Water-supply sufficient. Supply of fodder getting short.
45	Singhbhum	„ 26, '92	Nil	Weather—very hot. Mango and *mahua* are the only crops to report on. Prospects poor in Dumaria and Asanbani, but elsewhere good. No change in prices of food-grains. No scarcity of water and fodder-supply.
46	Manbhum	„ 26, '92	Nil	Weather—very hot during the day. Rain badly wanted. *Mahua* being gathered. General prospects unchanged. Prices steady. Tanks are getting dry.
	Gobindpur	...	Nil	

Published for general information.

CALCUTTA; REVENUE DEPT.,
The 29*th March*, 1892.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

The average fall of the corresponding period for 24 years, S.-G.'s Office ...	2·69

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast.

C. LITTLE,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 28*th March* 1892.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the tations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 26th of March 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district.	Of week. Normal mean.	Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th October 1891. Mean for district.	Since 16th October 1891. Normal mean.	Since 16th October 1891. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.— .....indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 29*th March* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 26TH OF MARCH 1892.

WEATHER during the previous week had been of ordinary hot weather character in all districts, and beyond the slight oscillatory changes of pressure, temperature, humidity, &c., which take place during fine settled weather, there had been no meteorological changes in that period of any importance. These hot weather conditions have also continued almost unchanged during the present week, and except in some of the districts of North Bengal, where rain accompanying local storms was reported on the last two days of the week, the weather has again been fine and settled with high temperature and generally rather low humidity over almost the whole province and for almost the whole week. The changes also of meteorological conditions which have taken place from day to day during the week have been generally small and have therefore been of little practical importance.

On the 20th pressure was generally falling moderately, while temperature was rising slowly. Pressure was below the normal by amounts ranging up to about a sixth of an inch in North Bengal, and the mean temperature was usually above the normal by about 6° or 7°. Winds also were south-westerly and westerly over the whole province. The changes on the 21st were unimportant except that humidity was generally becoming slightly lower, but on the 22nd pressure had risen by about a twentieth of an inch, though the other changes were small. On the 23rd again pressure rose slowly, but on the 24th it had again commenced to fall, and was generally more than a tenth of an inch below the normal. Temperature had also risen moderately at the majority of stations on this day, but as it had fallen slightly on the previous days, the mean temperature was still about 5° or 6° above the normal. On the 25th pressure again fell moderately, and a very slight low-pressure area formed over the east of Bihár and part of West Bengal, where the barometer was about a sixth of an inch below the normal. The wind directions on this day commenced to change, and showed a tendency to circulate round the low-pressure area in the centre of the province, and winds became southerly and south-easterly at the southern stations, and easterly in the north of the province. On the 26th, however, pressure again rose slowly except at the southern stations and the low-prssure area almost disappeared. Winds, however, became still more strongly easterly, and they were on this day easterly and south-easterly at almost all stations. With these easterly winds humidity generally increased decidedly, and became rather high, while temperature remained excessive, and the mean temperature was generally about 5° to 6° above the normal. Conditions on the last two days of the week, therefore, were somewhat disturbed, and though at the majority of stations the weather remained fine, yet a few local storms with rain occurred in the Darjeeling, Jalpaiguri, Pabna, Bogra, Rajshahi, and Nadia districts, and which rainfalls were reported on the morning of the 26th.

Pressure—Has been below the normal almost throughout the week, and the mean pressure for the period has been below the normal by more than a tenth of an inch. The defect has indeed generally been 0·11" to 0·13" except in parts of North and East Bengal, where at some stations it has been less than a tenth of an inch, and, on the other hand, the defects have been generally largest in Bihár.

Temperature—Has again been very largely in excess of the normal throughout the week, and the mean temperature of the province has been no less than 4·7° in excess of the normal, while in Bihár and Chota Nagpur the excess has been from five and-a-half to six degrees.

The distribution of temperature over the province and its variation from the normal for the week are most clearly seen in the table below, where the average maximum, minimum and mean temperatures for the period at nine typical stations in different districts are compared with their normal values. The variation from the normal has been very large both in the day and night temperatures, but the excess has been decidedly larger in the maximum than in the minimum temperatures :—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 26th March 1892.

	Normal mean maximum temperature for the week ending 26th March.	Actual mean maximum temperature for the week ending 26th March 1892.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 26th March.	Actual mean minimum temperature for the week ending 26th March 1892.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 26th March.	Actual mean daily temperature for the week ending 26th March 1892.	Variation of actual mean from the normal.

Darjeeling	58·4	58·9	+0·5	45·4	48·9	+3·5	51·9	54·0	+2·1

Rainfall—Has only occurred at a few stations on the 25th and 26th. The principal falls were, Bogra 2·46 inches, Kushtia 0·93 inch, Darjeeling 0·47 inch, Buxa 0·46 inch, Lalpur 0·42 inch, Bhágatpur 0·35 inch, Nowkhilla 0·15 inch, and falls of a tenth of an inch at Kalimpong and Kurseong.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 26th of March 1892:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th Oct. 1891.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

* Includes 419 tons and 498 tons during 1892 and 1891, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.
† Railway plant and rolling-stock 539 tons and 81 tons for the years 1892 and 1891, respectively, for which no "Up" and "Down" register maintained.

Statement of principal commodities carried on the Bengal Central Railway during the month of January 1892.

Increase.

	Tons.
Rice	1,633

The chief increase is in despatches from Nawapara and Khulna. This is due to a rise in prices in the Calcutta market.

Decrease.

	Tons.
Coal	2,076

Due to a change in the arrangements for delivery of coal for railway and flotilla use.

HARRY STUART,
Joint-Auditor and Examiner of Accounts.

CALCUTTA, *the 21st March* 1892.

EASTERN BENGAL STATE RAILWAY.

Abstract of principal commodities carried over the Eastern Bengal State Railway during the month of January 1892, as compared with the same month of the previous year.

* Includes 3,247 tons and 6,080 tons during 1892 and 1891, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock 5,050 tons and 4,788 tons for the years 1892 and 1891, respectively, for which no "Up" and "Down" register maintained.

Statement of principal commodities carried on the Eastern Bengal State Railway during the month of January 1892.

INCREASES.

	Tons.		Tons.
Coal	5,957	Rice	4,529
Partly due to provision for brick-burning.		The chief increase is in despatches from Goalundo, Jajpurhat, Nawabganj, and Dinajpur. This is due to a rise in prices in Purnea and Kuch Behar districts, and at hill stations	

DECREASES.

	Tons.		Tons.
Jute, screwed	4,411	Jute, unscrewed	16,554
Daroani, Kasba, Mymensingh, and Post Golah show the principal decreases.		The decrease was general among jute-booking stations on the several sections, due to short crop.	

HARRY STUART,
Examiner of Accounts.

CALCUTTA, *the 21st March* 1892.

NALHATI STATE RAILWAY.

Statement showing Increases and Decreases in tonnage of Staples carried over the Nalhati State Railway during the month of February 1892, as compared with the same month of the previous year.

INCREASE.

	Tons.
Grains—	
(4) Others	87
Due to greater despatches of kollye from Azimganj station.	
Jute—	
(1) Raw	254
Due to greater despatches of pressed jute for fair demand.	
Oil-seeds—	
(1) Linseed	55
Owing to greater demand and insufficient water in the river.	
(2) Mustard and rape	155
Owing to greater demand and insufficient water in the river.	
Stone and lime	12
Due to there being no traffic under this head during the previous year.	

DECREASE.

	Tons.
Cotton, raw	10
Owing to previous stock not being exhausted.	
Cotton piece-goods—	
(1) European	15
Owing to previous stock not being exhausted.	
Grain—	
(2) Rice	112
Due to less export owing to short crops this year.	
Sugar—	
(1) Drained ...	12
Due to less demand	

R. G. MOOKERJEE,

Manager, Nalhati State Railway.

IRRIGATION OPERATIONS FOR KHARIF, 1891-92:

No. 441*I.*

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Irrigation.

Dated Calcutta, the 5th April 1892.

RESOLUTION.

READ—

Statements Nos. I, II, and III of Irrigation Operations of Canals in Bengal during the kharif season of 1891-92.

OBSERVATIONS.—The area irrigated during the kharif season of 1891-92 was 532,118 acres, against 498,662 acres in 1890-91, showing an increase of 6·7 per cent.

2. The increase took place mainly on the Sone and Saran Canals, being due to the scanty rainfall during the season in the districts commanded by those works.

On the Orissa and Midnapore Canals the rainfall was, on the contrary, more plentiful than last year though unequally distributed through the irrigating season, and the Balasore district showed a decrease of 2,908 acres. In the Cuttack and Midnapore districts the area irrigated was slightly in excess of 1890-91, a result which was mainly due to the scanty rainfall in October.

3. The increase or decrease in the irrigation from each canal is given in the following statement:—

Canals.		Kharif season.		More.	Less.
		1890-91.	1891-92.		
		Acres.	Acres.	Acres.	Acres.
Orissa ...	Taldunda	41,247	41,568	321	......
	Kendrapara ...	71,403	70,863	......	540
	High Level, Ranges I, II, and III	63,399	60,897	......	2,502
Midnapore Canal ..	... ...	82,002	82,198	196	......
Sone ...	Patna	56,600	74,161	17,561	......
	Arrah	120,150	127,885	7,735	......
	Buxar	62,871	70,901	8,030	......
Saran Canal	... ...	990	3,645	2,655	......
	Total ...	498,662	532,118	36,498	3,042

4. On the Midnapore and Saran Canals the only kharif crop irrigated is rice, whilst on the Orissa and Sone Canals there are in addition sugarcane and hot-weather crops.

Order.—Ordered that a copy of this Resolution, and of the statements Nos. I, II, and III, be submitted to the Government of India, Public Works Department, for information.

Ordered also that copies of this Resolution, and of the statements, be forwarded to the Commissioners of the Orissa, Burdwan, and Patna Divisions; the Collectors of Cuttack, Midnapore, Patna, Shahabad, Gaya and Saran; the Superintending Engineers, Orissa, South-Western, and Sone Circles; and the Examiner of Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

C. W. ODLING,

Joint-Secretary to the Govt. of Bengal.

ESTABLISHMENT OF A FEMALE HOSPITAL AT BARANAGAR.

No. 894 Med., dated Calcutta, the 1st April 1892.

From—H. C. STREATFEILD, ESQ., Under-Secy. to the Govt. of Bengal, Municipal Dept.,
To—The Commissioner of the Presidency Division.

I AM directed to acknowledge the receipt of your endorsement No. 10-M. Mdl., dated the 16th March 1892, with which you forward a copy of a letter from Babu Benode Lal Ghose, Vice-Chairman of the Baranagar Municipality, offering to make over to Government a sum of Rs. 10,000 for the purpose of establishing a female hospital in that town, and, further, to bear the cost of a bigha of land for a site for the hospital, if Government will acquire the same at the side of the Victoria road in Baranagar. The donor desires that the institution thus established shall be called after the name of his mother.

2. In reply, I am directed to say that the Lieutenant-Governor accepts the generous offer made by Babu Benode Lal Ghose on the terms proposed, and to request that you will be so good as to convey to the donor an expression of the Lieutenant-Governor's appreciation of his liberality and public spirit. The Magistrate of the 24-Parganas should take early steps to acquire a site in the locality indicated.

3. This letter will be published in the *Calcutta Gazette.*

PROPOSED CONSTRUCTION OF A FEMALE WARD FOR THE NASIRABAD HOSPITAL.

No. 900Med., dated Calcutta, the 1st April 1892.

From—H. C. STREATFEILD, ESQ., Under-Secy. to the Govt. of Bengal, Municipal Dept.,
To—The Commissioner of the Dacca Division.

I AM directed to acknowledge the receipt of your letter No. 623J., dated the 15th March 1892, in which you report, for the information of Government, that Srimati Bidyamayi Debi Chaudhurani of Muktagachia, in the district of Mymensingh, has promised to place at the disposal of the Nasirabad Municipality a sum of Rs. 4,000 for the construction of an additional ward to the local hospital, to be called the "Bidyamayi Female Ward," and that the Commissioners of the Municipality have accepted the offer.

2. In reply, I am directed to request that you will be so good as to convey to Srimati Bidyamayi Debi Chaudhurani the thanks of the Lieutenant-Governor for her liberality and public spirit. This letter will be published in the *Calcutta Gazette* for general information.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 2nd April 1892.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
Burdwan Divn.			
1	Burdwan April 2, '92 Kalna ... Katwa ... Raniganj ...	Nil Nil Nil Nil	Weather—very hot; clouds about at times, and high winds from south. Rain much wanted for ploughing. Prices of common rice:— Srs. Sadar ... ... 12 to 16 per rupee. Kalna ... ... 10 to 13½ per rupee. Katwa ... ... 13½ per rupee. Raniganj ... ... 13 per rupee.
2	Bankura „ 2, '92	Nil	Weather—hot and dry. Sugarcane and *rabi* harvest finished. Rain wanted very badly. Fodder and water insufficient. Condition of cattle fair. Common rice selling at 15½ seers per rupee at Bankura and 16½ seers at Vishnupur.
3	Birbhum „ 2, '92 Rampur Hât ...	Nil Nil	No crops to report about. State of cattle normal. Fodder and water still sufficient, but tanks unusually low for the time of year. Price of common rice 13 to 16 seers per rupee.
4	Midnapore „ 2, '92	Nil	Weather—very hot. A strong wind blowing almost every day. *Rabi* crops are not very good. Want of fodder beginning to be felt. Prices of common rice:— Srs. Sadar ... ... 13 per rupee. Contai ... ... 16 per rupee. Tamluk ... ... 13 per rupee. Ghatál ... ... 12½ per rupee.
5	Hooghly „ 2, '92 Serampore ... Jahánabad ...	Nil Nil Nil	Weather—warm for the time of year. Strong southerly gales from south-west. Heavy dew. Clouds in the evening and morning. In Sadar and Serampore subdivisions scarcity of water; most tanks are dry, but water is to be had by deepening them a few feet. No crops except sugarcane cuttings in the ground. No difficulty in obtaining fodder-supply. Prices of common rice:— Srs. Ch. Sadar ... ... 10 0 per rupee. Serampore ... ... 11 14 per rupee. Jahánabad ... ... 13 5 per rupee.
6	Howrah „ 2, '92 Ulubaria ...	Nil Nil	Weather—warm. Strong cool south wind. Rain wanted for *rabi*. Condition of cattle good. Fodder and water-supply adequate. Price of rice 12 to 13 seers per rupee.
Presidency Divn.			
7	24-Parganas „ 2, '92	Nil	Weather—seasonable: cloudy with strong wind. Prospects unchanged. Rain much wanted. Supply of fodder sufficient. Complaints of want of drinking water received from all stations of Sadar subdivision. Prices stationary.
8	Nadia „ 2, '92 Kushtia ... Meherpur ... Chuadanga ... Ranaghat ...	Nil 1·13 Nil Nil Nil	Weather—hot. Rain in Kushtia has helped early sowings, but more is wanted. In the rest of the district, rain badly wanted everywhere. Common rice selling at from 11 seers to 13 seers 14 chitaks per rupee. Health of cattle good, and supply of fodder sufficient.
9	Khulna „ 2, '92 Bágerhat ... Satkhira ...	Nil Nil Nil	Weather—warm; occasionally cloudy with high wind. Want of rain is being severely felt, and *boro* on high land is drying up. Price of coarse rice varies from 11 to 15 seers per rupee. Supply of fodder sufficient, but there is scarcity of water both for men and cattle.
10	Jessore „ 2, '92 Jhenida ... Magura ... Narail ... Bangaon ...	Nil Nil 0·10 Nil Nil	Weather—days hot, mornings and evenings pleasant. *Boro* paddy grown in Narail subdivision is withering for want of rain. Rain badly wanted for tillage. Drinking water generally insufficient. Price of rice has risen slightly.
11	Murshidabad „ 2, '92	Nil	Weather—very hot. *Rabi* crop nearly all harvested. Rain much wanted. Fodder obtainable for cattle. Common rice being sold at 11 seers per rupee.
Chittagong Divn.			
12	Chittagong „ 2, '92	0·04	Weather—seasonable. Rain much wanted for all crops in most parts of the district; but heavy local showers in the north on the 29th March, and at Fenna 2 inches with hail and violent wind. Prices rising. Condition of cattle good. Supply of fodder sufficient.
13	Noakhali „ 2, '92 Fenny ...	Nil 1·04	Weather—hot and cloudy. Rain has fallen in some parts of the district, but more is wanted. Sowing of *aus* retarded for want of rain. Cattle disease prevails in Chhagalnaia. Fodder sufficient; water getting scarce. Rice sells at 13½ seers per rupee in Sadar and 14½ seers in Fenny.
14	Tippera „ 2, '92	1·40	Weather—hot with high southerly winds. *Kalai* and chillies being harvested. Rain has improved prospects. Ploughing operations going on vigorously. More rain needed. Cattle-disease in Sadar subdivision.
15	Chittagong Hill Tracts. Mar. 31, '92	0·42	Weather—sultry and hot throughout the week. Planting of sugarcane almost over. Lands being ploughed for *aus* paddy. *Jum* cutting still continues, and *jum* burning in some places has commenced. Tobacco and chillies being gathered in some places. Cattle-disease reported. Common rice being sold at 10 seers per rupee.

Division	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*					
DACCA DIVN.	16	Dacca	April 2, '92	1·52	Weather—seasonable. *Cheena, kaon* and *boro* paddy thriving. Ploughing for jute and early rice going on. Recent rain has done good to standing crops. Fodder available. Common rice selling at from 12 to 16 seers per rupee. Condition of cattle good.
	17	Faridpur	„ 2, '92	0·66	Weather—very hot, with strong southerly wind blowing all the week till last evening (1st April), when a mild nor'-wester broke over the Sadar station. State of standing crops only fair; the rain of yesterday (1st April) will do good, but more is wanted for sowings. Rice selling at 14 seers per rupee at the Sadar and both subdivisional head-quarters. Condition of cattle good and fodder available.
	18	Backergunge	„ 2, '92	Nil	Weather—cloudy in the morning and hot in the day. Strong south wind blowing, and high tides have flooded the fields with salt water. State and prospects of crops unsatisfactory. Rain very much wanted. Ordinary rice sells at from 10 to 14 seers per rupee. Fodder sufficient, but there is a difficulty about drinking water in parts where there are no good tanks.
	19	Mymensingh	„ 2, '92	1·32	Weather—cool and stormy. Prospects of standing crops improved by rain. Cultivation for jute and *aus* has commenced. Common rice sells at 13 to 16 seers a rupee. Supply of water and fodder sufficient on the whole.
RAJSHAHI DIVN.	20	Dinajpur Thakurgaon	„ 2, '92 ...	1·07 1·17	Weather—cool and cloudy in the morning, hot during the day. Rain has done much good to *kaun, bhadoi*, jute and sugarcane. Price of rice both at Sadar and Thakurgaon unchanged. Condition of cattle good. Supply of fodder and drinking water fair.
	21	Rajshahi Nator Nowgong	„ 2, '92	1·10 1·07 1·20	Weather - hot and seasonable. The shower of rain that fell on Sunday (27th March) night has facilitated ploughing, and generally done much good. *Rabi* harvest has not been a bumper one, rather below the average. Cattle are not suffering from disease; those in the Barind only have not sufficient fodder. Water-supply is not sufficient. No change in price of rice since last report.
	22	Rangpur Gaibanda Nilphamari Kurigaon Ulipur	„ 2, '92	3·70 2·77 1·19 3·85 2·35	Rainfall all over the district on 26th and 27th March; on those days the weather was cool, otherwise it has been sultry. Prospects of *aus* paddy already sown have been much improved by the rain. More *aus* and jute are now being sown. Prospects on the whole favourable. Fodder sufficient.
	23	Bogra Sherpur Naukhila	„ 2, '92	1·20 1·32 0·81	Weather—changeable: sometimes fine and dry, sometimes overcast and damp, with varying winds. On the 25th and 27th March 3·66 inches of rain fell at Bogra, and there has been more or less rain all over the district. It has improved the late *rabi* crops, and especially the prospects of *aus* rice and jute; in some places these plants have sprouted, and ploughing has been going on apace. There is no lack of fodder or water. Common rice is selling on the average at 13 seers per rupee.
	24	Pabna	„ 2, '92	0·24	Weather—cloudy in the morning; strong winds prevailing throughout the day. Recent rain has facilitated ploughing and sowing, but more is wanted. Common rice sells between 12 and 13 seers per rupee. Water-supply and fodder sufficient everywhere except at Dulai station. Small-pox among cattle prevailing in Kamarkhund outpost, Sirajganj subdivision.
	25	Darjeeling	„ 2, 92	0·45	Weather—fair. General rain in the district, but more is needed in the Terai. Ploughing of land for jute and *bhadoi* going on. Wheat and barley being harvested.
	26	Julpaiguri	„ 2, '92	0·53	Weather—nights and mornings cool, days hot. The small rainfall has done some good to *bhadoi* and jute sowings, but more rain is urgently wanted. Common rice selling at from 8 to 11 seers per rupee. Fodder sufficient. No cattle-disease.
BIHAR.					
BHÁGALPUR DIVN.	27	Monghyr	„ 2, '92	Nil	Weather—days hot, nights agreeable. Twelve annas outturn of *rabi* and oilseeds in Begusarai is expected, while annas 6 and 4 respectively in Jamui, where mangoes and *mahua* have to some extent been damaged by westerly wind. Lack of fodder in Jamui and Nawadi, and in some places want of water is felt. Common rice 11 seers per rupee and Indian corn 20 seers in the two subdivisions. At Sadar common rice selling at 10¼ seers per rupee.
	28	Bhágalpur	„ 2, '92	0·57	Rain on 27th March. Wind easterly. Heat seasonable. Harvesting of *rabi* crops going on. Rain of 27th has done good to ploughing for *bhadoi* sowings. Wheat crop about 4 annas. Water low. Fodder getting scarce. Common rice 11 seers 6 chitaks per rupee.
	29	Purnea Kishanganj Araria	„ 2, '92	0·17 Nil Nil	The rain was in parts nearly half an inch. It is now blowing hard from the east with some clouds. Ploughing continues. A slight fall of rain under half an inch did some good, but more is urgently necessary. No cattle-disease or want of fodder. Prices of common rice:— Srs. Sadar ... ... 11 to 12¼ } Kishanganj ... ... 10 } per rupee. Araria ... ... 12 }
	30	Malda Chanchal Gajol Shibganj	„ 2, '92	0·97 0·45 0·25 0·13	Weather—seasonably hot. Rainfall of 28th March was general. It has done much good to mango crop and *boro* paddy, and has facilitated ploughing for *bhadoi* crops. Fodder and water becoming scarcer. Condition of cattle good. Coarse rice sells at from 11 to 13 seers per rupee.
	31	Sontal Parganas	„ 2, 92	Nil	Weather—hot. Slight rain in Rajmahal. Winds generally westerly. *Mahua* turning out badly in Deoghur. Mangoes suffering from drought. *Rabi* harvest complete in Pakur. Wheat 8 annas. Cattle-disease reported from Godda. Prices of rice and wheat:— Srs. Rice ... ... 10 to 14 } per rupee. Wheat ... ... 14 } Water-supply running short and fodder getting scarce.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 2nd of April 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district.	Of week. Normal mean.	Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 1st April 1892. Mean for district.	Since 1st April 1892. Normal mean.	Since 1st April 1892. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—.... indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 5*th April* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 2ND OF APRIL 1892.

WEATHER conditions at the close of the previous week were a little disturbed, and a few local storms with rain were occurring in North Bengal, though over the remainder of the province weather was generally fine and of ordinary hot weather character. On the 27th, or the first day of the present week, pressure rose slowly over the whole province except over parts of North Bengal, while temperature was falling moderately in all districts, though it was still high and above the normal by from about 3° to 6° or 7°. Humidity was also high, and at almost all stations in the province winds were south-easterly and easterly, and except for one or two showers in North Bengal there was no rain reported on this day. On the morning of the 28th westerly winds had set in over Chota Nagpur and parts of Bihár, and winds generally became much more southerly than on the 27th, apparently showing that a westerly wind current was forcing back the moist easterly current which had been previously blowing, and hence, with this partial interaction of opposing wind currents, conditions became favourable for the production of local storms. Thus on the morning of the 28th almost every station in North and East Bengal and some stations in Bihár and South-West Bengal reported moderate to heavy rain, which generally fell during thunderstorms, or nor'-westers some of which appear to have been exceedingly violent. Pressure on this day also fell exceeding rapidly, the fall at some stations almost equalling a sixth of an inch, and a distinct low-pressure area, where pressure was from a fifth to a quarter of an inch below the normal, formed over Bihár, Central and Western Bengal, and part of Chota Nagpur, again indicating the decidedly disturbed state of the atmosphere. With the existence of this low-pressure area in Central Bengal and Bihár and with the very steep baric gradients which obtained near the head of the Bay, very strong southerly winds set in over Bengal and over the Bay from about Gopalpur northwards, and these continued almost up to the close of the week. The mean temperature on this day also became below the normal at some of the extreme eastern and northern stations, but elsewhere it was still above it by about 3° to 4°. On the 29th pressure continued to fall at the eastern stations and in Assam, though it remained fairly steady elsewhere, showing probably that the area of disturbance was being transferred to Assam. Temperature also fell slowly at many stations, but winds were to a great extent unchanged in direction since the previous day, and very strong winds were reported in connection with the steep baric gradients which still existed. The number of local storms with rain reported in Bengal on the 29th was very small, and they were confined to a few districts in East and North Bengal, but Assam seems to have received heavy rain, for Sibsagar reported nearly four and-a-half inches of rain on this day. On the 30th a rather rapid increase of pressure took place, and the distribution became a little more normal, but still gradients were steep and gave strong southerly winds over the province, while on the 31st a further rapid rise occurred, and pressure became slightly above the normal over parts of South and South-East Bengal, though it was still slightly in defect elsewhere. Again on April 1st pressure rose slowly at all stations except a few in the centre of the province where a distinct tendency to the formation of a low-pressure area existed, though on the 2nd with a further rather rapid increase of pressure this tendency practically disappeared and pressure distribution became fairly normal. Up to the 1st, however, conditions in Bengal generally remained fairly settled, but from the 1st to the 2nd they were again slightly disturbed, and a considerable number of local storms with rain occurred in certain districts of East and North Bengal. Temperature during the last few days of the week had generally fallen slowly, but even up to its close the mean temperature was generally in excess of the normal by amounts ranging up to about 4°. Owing also to the decrease in the steepness of the baric gradients over the province, the strength of the winds diminished rapidly towards the close of the week, and only moderate southerly, and south-easterly winds were reported on the 2nd.

The meteorological conditions during the week have therefore been decidedly important from the fact that rather heavy general rain has fallen over practically the whole of North and East Bengal and light rain over parts of North Bihár, but the falls in other divisions have been unimportant.

Pressure—Has been below the normal during the greater part of the week, and the defect at one time amounted to a distinct depression. The mean pressure for the week has therefore been in defect of the normal in all districts, the defect usually ranging from about 0·03″ in South-East Bengal to considerably more than a tenth of an inch in parts of Bihár and of West Bengal and Chota Nagpur, over which area the area of low pressure existed for some days.

Temperature—Has again been high almost throughout the week, and the mean temperature of the province for the week has been 3·7° in excess of the normal. This excess has been largest in Chota Nagpur, where it has equalled 5·5°, and in South-West Bengal and South Bihár, where it has been 4° and upwards.

The distribution of temperature over the province and its variation from the normal for the week are most clearly seen in the table below, where the average maximum, minimum, and mean temperatures for the period at nine typical stations in different districts are compared with their normal value. During this week the night or minimum temperatures have been more largely in excess of the normal than the day or maximum temperatures; but some

very high maximum temperatures have nevertheless been reported, for Bankura on the 29th March registered 107·6° and Chaibassa 108·1°, while temperatures of from 106° to 107° have been recorded at Cuttack, Raniganj, and Dehri:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 2nd April 1892.

	Normal mean maximum temperature for the week ending 2nd April.	Actual mean maximum temperature for the week ending 2nd April 1892.	Variation of actual mean from the normal. Rainfall.—North Bengal has received an average fall of 1·44 inches of rain during the week and East Bengal one of 0·85 inch. In North Bihár the falls only average 0·20 inch, and in South-West Bengal and North Bihár only 0·06 inch.

The districts which have received the heaviest falls have been Rangpur 2·88 inches, Mymensingh 2·21 inches, and Jalpaiguri 1·75 inches, while falls of one to one and-a-half inches are reported in Rajshahi, Bogra and Dacca, and of half to one inch in Faridpur, Comilla, Malda, Noakhali, Pabna, Dinajpur, Darjeeling, and Purneah.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 2nd of April 1892:—

Meteorological Divisions.	Temperature.						Rainfall.

The average fall of the corresponding period for 24 years, S.-G.'s Office ...	0·12
The total fall from 1st January to 2nd April 1892	0·04
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	2·81

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast.

C. Little,

For Meteorological Reporter to the Govt. of India.

Meteorological Office, Govt. of India;

Calcutta, the 4th April 1892.

Results of the Barometrical and Thermometrical Observations taken at the Meteorological Office, Chowringhee, from 27th March to 2nd April 1892.

CONTENTS.

AMENDMENT OF THE COURT OF WARDS' ACT.

REVENUE DEPARTMENT—LAND REVENUE, No. 1470LR.

Calcutta, the 12th April, 1892.

RESOLUTION.

READ again—

Letter No. 945, dated the 20th April 1891, with enclosure, from the Registrar of the High Court.

Letter No. 1577, dated the 15th September 1891, with enclosure, from the Legislative Department of the Government of India.

Read—

Abstract of the Proceedings of a Meeting, held on the 26th March, 1892, of the Council of the Governor-General of India for the purpose of making Laws and Regulations, published in Part VI of the *Gazette of India* of 2nd April, 1892.

Under the provisions of clause (7), section 7 of the Public Demands Recovery Act, VII (B.C.) of 1880, arrears of rent and other demands recoverable as rent, on private estates under the management of the Court of Wards, are realizable by means of certificates, just as any sum of money due to Government from any private individual or others under the other clauses of the same section. This power is, however, restricted in practice by the following executive orders, which form rules 22, 22A, and 23 at pages 192-3 of the Manual issued by the Board of Revenue for the guidance of officers in the administration of Wards', Attached and Encumbered Estates:—

"At the same time it must never be forgotten that the certificate procedure is not to be looked upon as the normal method of collecting the dues of Government. The officer responsible for the collections will in all cases be expected to show to the satisfaction of the Collector that he has done his best to realize the amount by ordinary means, and that defaulters have been duly warned before the report of their names to the Collector.

"It has been brought to the notice of Government that certificates are in some districts filed in excessive numbers, and for demands which would probably have been amicably realized had the claim been brought to the notice of the defaulter. Great caution should be used in the issue of certificates which are a suitable method for the recovery only of demands of which the debtor was previously cognizant, and which he has neglected to pay in due course.

"The Collectors should not allow certificates to issue in cases where questions of right or title are concerned. When such questions arise, the Revenue Courts are at once to set aside the certificate under section 13 of Act VII (B.C.) of 1880.

"The object of the extension of the certificate procedure to Wards' estates is to facilitate collections, and to do this by dispensing with every step between the filing of the plaint and the making of the decree; but it is not intended that certificates should be filed in any cases in which suits would not have been instituted under the former procedure. It rests with Collectors to exercise due care and discretion in the making of certificates, so as to leave no room for any misapprehension of the practice."

2. In April 1891, a Bill having been introduced into the Bengal Legislative Council to amend the Court of Wards' Act, IX (B.C.) of 1879, by empowering the Court of Wards to take charge of the property of persons declared disqualified on their own application, the Hon'ble the Judges of the High Court took exception to the measure on the ground that it involved a further extension of the certificate procedure which ought not, in their opinion, to be put in force in respect of any demand which is doubtful or the subject of a *boná fide* dispute, and the Government of India shared and supported the view taken by the High Court. The Bill out of which this discussion arose was transferred to the Supreme Legislative Council, and was passed into law as Act IV of 1892, and published in the *Gazette of India* of the 26th March.

3. It has been urged, and the Lieutenant-Governor concurs in the view taken, that when the Court of Wards first assumes the management of a private estate, it generally finds the estate in a condition of great confusion. The accounts and the rent rolls are in an extremely inaccurate and untrustworthy state, and it is a hard thing for a raiyat that a Manager of an estate should have legal power given him to act upon inaccurate and untrustworthy *jamabandis* and other documents as if they were thoroughly reliable, and should be able to issue a process against him for the rent which these papers show to be due, and impose on the raiyat the burden of proving that the rent is not due. It is clear from the orders of the Board of Revenue quoted above that such a case cannot often occur, and that the Board have foreseen the evil which it is desired to guard against. But still it is possible that from time to time those orders may be overlooked, and it is desirable to take more definite steps for preventing the occurrence of any injustice.

4. Sir Charles Elliott fully agrees with the High Court in thinking that a summary process is not suitable in a case where any dispute exists as to whether the amount is due or not, and His Honour intends to take early steps to propose the amendment of the Public Demands Recovery Act, VII (B.C.) of 1880, in this direction. Meanwhile, the Lieutenant-Governor directs that, as soon as an estate comes before the Court of Wards, the first duty of the Court shall be to carry out the provisions of section 101 and the following sections of the Bengal Tenancy Act, VIII of 1885, to make a settlement of the estate, that is, to have a field measurement made and a complete record of rights prepared. Until such a record of rights is made, and every dispute between landlord and raiyat is decided, and a clear account has been prepared showing exactly what each man holds, what his tenure is, and what the demand from him is, no certificate is to be issued for any unpaid arrears of that demand. Until such measures have been adopted, the Manager of the estate is not to be permitted to use the certificate procedure, but must go on collecting only undisputed rents, or have recourse to the ordinary law. The Board of Revenue will be requested to issue a circular with a view to rules to this effect being inserted in the Wards' Manual, and to see that the rules are strictly observed.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette*, and that a copy of it be forwarded to the Board of Revenue, Lower Provinces.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

BENGAL VETERINARY INSTITUTION.

REVENUE DEPARTMENT.

Calcutta, the 13*th April*, 1892.

RESOLUTION No. 1476Agri.

READ—

The Resolution of this Government, No. 3886 Agri., dated the 22nd December 1891, regarding the establishment of a Veterinary School and Hospital in the vicinity of Calcutta.

Letter from Brigade Surgeon Lieutenant-Colonel Kenneth McLeod, Professor of Surgery, Calcutta Medical College, dated the 26th March 1892, offering to found a scholarship in connection with the Bengal Veterinary Institution.

DR. KENNETH McLEOD, Professor of Surgery, Calcutta Medical College, has endorsed to Government 5 per cent. debentures, amounting to Rs. 2,500, for the purpose of founding a scholarship of the value of Rs. 10 a month in connection with the Bengal Veterinary Institution on the following conditions:—

(1) That the scholarship be called "The Sheo Baksh Bagla Veterinary Scholarship," in recognition of that gentleman's liberality in connection with the establishment of the first Veterinary School and Hospital in Bengal.

(2) That a candidate must have passed (*a*) the Entrance Examination of the Calcutta University, or (*b*) the Middle English Scholarship, or (*c*) the Middle Vernacular Scholarship examination, preference being given to these examinations in the order stated.

(3) That in awarding the scholarship preference be given to an inhabitant of the district of Jessore.

(4) That in the event of more than one candidate possessing the necessary qualifications coming forward, preference be given to the candidate who has attained the largest number of marks in the examination.

(5) That the scholarship be tenable for a period of three years, in connexion with the Bengal Veterinary Institution.

2. The Lieutenant-Governor is pleased to accept Dr. Kenneth McLeod's handsome offer, and desires to thank him for his liberality and public spirit. The interest which Dr. Kenneth McLeod has throughout his service taken in the treatment of the diseases of cattle in Bengal is well known, and is further proved by his thus endowing, on his departure from India, the institution which he has done so much to encourage.

3. The securities have been re-endorsed to the Accountant-General, Bengal, who will be the Administrator of the Fund.

ORDER—Ordered that copies of the Resolution be forwarded to the Director of Land Records and Agriculture, Babu Sheo Baksh Bagla, Mr. W. B. Gwyther, Members of the Committee appointed to complete the organization of the proposed School and Hospital, and for their management when established, and to Dr. Kenneth McLeod for information.

Ordered also that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

CALCUTTA,
The 12*th April*, 1892.

LIBERALITY OF BABU DURGA PRASAD, OF GAYA.

No. 1054Med., dated Calcutta, the 9th April 1892.

From—H. H. RISLEY, ESQ., C.I.E., Offg. Secretary to the Government of Bengal, Municipal Department,
To—The Commissioner of the Patna Division.

I AM directed to acknowledge the receipt of your letter No. 243G, dated 28th March 1892, with which you forward a copy of a letter from the Magistrate of Gaya reporting that Babu Durga Prasad, a banker and zamindar of Gaya, has deposited a sum of Rs. 10,000 in the local treasury as a contribution to the Gaya Branch of the Lady Dufferin's Fund, to be utilized for erecting a hospital for women in that town, to be called the "Panitra Ward," after the name of the donor's mother.

2. In reply, I am directed to say that the Lieutenant-Governor accepts the gift offered by Babu Durga Prasad on the terms proposed, and to request that you will be good enough to convey to him the thanks of His Honour for his liberality and public spirit. The correspondence will be published in the *Calcutta Gazette.*

No. 243G, dated Bankipore, the 28th March 1892.

From—D. R. LYALL, ESQ., C.S.I., Commissioner of the Patna Division,
To—The Chief Secretary to the Government of Bengal.

I HAVE the honour to forward herewith copy of a letter No. 743, dated the 18th instant, from the Magistrate of Gaya, together with a copy of a letter from Babu Durga Prasad, a banker and zamindar of Gaya, offering a contribution of Rs. 10,000 to the Gaya Branch of the Lady Dufferin's Fund.

2. I approve of the suggestions made by Mr. Grierson in paragraphs 4 and 5 of his letter.

No. 743, dated Gaya, the 18th March 1892.

From—G. A. GRIERSON, ESQ., Magistrate of Gaya,
To—The Commissioner of the Patna Division.

ON the eve of my departure from this district, I have much pleasure in forwarding herewith copy of a letter from Babu Durga Prasad, in which he mentions his intention of contributing Rs. 10,000 to the Gaya Branch of the Lady Dufferin's Fund. The money was paid into the treasury, to the credit of the Fund, to-day.

2. This will, I hope, enable the Committee to at once commence the erection of the proposed Zanána Hospital, which has been one of my most cherished designs for the benefit of the people of Gaya.

3. Babu Durga Prasad represents a large banking interest in Gaya Town, and has also landed property which he manages well.

4. I think that this most liberal and public-spirited contribution deserves some special recognition; and I would suggest that the gift be reported to Government, and the particulars published in the Gazette.

5. I have already thanked him in my own name, and I should also be glad if he were thanked by Government also.

Dated Gaya, the 16th March 1892.

From—BABU DURGA PRASAD, Banker and Zamindar, Gaya Town,
To—The Magistrate-Collector of Gaya.

I HAVE the honour to state that it is my eager desire to see that the Lady Dufferin Zanána Hospital at Gaya be built as soon as possible. I have therefore much pleasure in letting you know that I am willing to contribute Rs. 10,000 only towards the Gaya Branch of Lady Dufferin Fund. I beg that this humble contribution be accepted in the name of my much loved mother, to perpetuate whose memory a ward may be called "Panitra Ward," after her name.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 9th April 1892.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
BURDWAN DIVN.	1	Burdwan April 9, '92 Kalna ... Katwa ... Raniganj ...	Nil 0·89 0·06 0·76	Weather—cloudy and local storms. The showers which have fallen in limited areas have done a little good, but more rain urgently needed. Prices of common rice:— Srs. Sadar ... ... 12 to 16 } per rupee. Kalna ... ... 10 to 13¼ Katwa ... ... 13¼ Raniganj 13
	2	Bankura .. 9, '92	Nil	Weather—very hot. Rain wanted for ploughing. Condition of cattle fair Fodder and water not sufficient. Common rice selling at 15 seers per rupee at Bankura and 14 seers at Vishnupur.
	3	Birbhum .. 9, '92 Rampur Hât ...	Nil 0·69	A little rain in the north and on the eastern frontier. Where the rain has fallen the lands have been ploughed. Water is very low and fodder is getting scanty. Price of rice 13 to 16 seers per rupee.
	4	Midnapore .. 9, '92	Nil	Weather—very hot. Rain very much wanted. *Boro* is withering from want of rain. Fodder is beginning to run short. Prices of common rice:— Srs. Sadar ... ... 13 } per rupee. Contai ... ... 15 Tamluk ... ... 13 Ghatál 13¼
	5	Hooghly .. 9, '92 Serampore ... Jahánabad ...	2·08 0·17 Nil	Temperature has fallen slightly owing to rain. No further indication of rain. The rain that fell was insufficient and was local. It may have facilitated ploughing for *aus* to some extent. Prices rising gradually in Serampore and Jahánabad. Prices of common rice:— Srs. Ch. Sadar—figures not furnished. Serampore ... ... 11 14 } per rupee. Jahánabad ... ... 13 0 No difficulty in obtaining fodder-supply.
	6	Howrah .. 10, '92	0·15	Weather—warm. Strong south wind. Rain wanted for *rabi* and sugarcane. Condition of cattle good. Fodder and water sufficient. Price of rice 11 to 13 seers per rupee.
PRESIDENCY DIVN.	7	24-Parganas .. 12, '92	0·12	Weather—hot with strong wind. The little rain which fell during the week throughout the district has not improved the state of the ground. More rain is wanted. Want of drinking water has been reported from all the subdivisions. Supplying of fodder sufficient. Prices stationary.
	8	Nadia „ 9, '92 Kushtia ... Meherpur ... Ranaghat ...	1·16 1·21 0·10 0·22	Weather—hot. Ploughing for early rice going on. Rain much wanted for sowing operations, what has fallen not being nearly sufficient. Common rice sells at from 11 seers to 13 seers 14 chitaks per rupee. Condition of cattle good, and supply of fodder sufficient; but there is some scarcity of water.
	9	Khulna .. 9, '92 Bágerhat ... Satkhira ...	1·85 0·30 0·11	Weather—hot during the day with high winds. A good shower of rain fell at the head-quarters of the district, but the rain was scanty in other parts, and more rain is urgently needed everywhere for the *boro* on the ground, and for the cultivation of *aman* and *til*. Price of rice varies from 11 to 15 seers per rupee. Fodder for cattle sufficient, but want of drinking-water is still being felt by men and cattle.
	10	Jessore „ 9, '92 Jhenida .. Magura ... Narail ... Bangaon ...	0·44 0·53 0·62 0·69 0·80	Weather—hot and cloudy. More rain wanted for tillage. Drinking water generally insufficient for want of rain. Price of rice stationary.
	11	Murshidabad „ 9, '92	0·07	Weather—hot and dry. Rain wanted very badly. Harvesting of *rabi* crops almost completed. Sowing of *bhadoi* crop has commenced in Jangipur subdivision. In Kandi subdivision sowings delayed for want of rain. No want of fodder for cattle. Common rice sells at 11¼ seers per rupee.
CHITTAGONG DIVN.	12	Chittagong „ 12, '92	Nil	Weather—unusually dry. Rain badly wanted. Prices steady.
	13	Noakhali „ 9, '92	0·41	Weather—hot. State of standing crops unsatisfactory. High tides flooded fields in the islands and littoral tracts. Rain very much wanted for *aus* sowings. Fodder not insufficient, but drinking water is. No cattle-disease except in Chhagalnaya. Price of rice stationary.
	14	Tippera „ 9, '92	Nil	Weather—hot, bright. Harvesting of *kalai* completed; outturn about ten annas. Chillies being collected. Ploughing going on. Rain badly wanted. Cattle-disease severe in Sadar subdivision.
	15	Chittagong Hill Tracts. „ 7, '92	Nil	Weather—very hot. Gathering of chillies continues. Transplanting of sugar-cane almost over. Lands being ploughed for *aus*. *Jum* burning continues. Cattle-disease prevailing. Common rice being sold at 10 seers per rupee.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—concld.				
Dacca Divn.				
16	Dacca	April 9, '92	Nil	Weather—getting warm and mostly fine. *Cheena, kaon* and *boro* paddy doing well. Cultivation for early rice and jute going on, but more rain wanted. Common rices selling at from 12 to 15 seers per rupee. Fodder available. Condition of cattle fairly good.
17	Faridpur	„ 9, '92	0·04	Weather—very hot. Rain is much wanted for sowings. Very few crops on the ground, and their condition is not particularly good. Rice selling at head-quarters at 14 seers, at Madaripur at 13½ seers, and at Goalundo at 13 seers per rupee. No cattle-disease and no want of fodder.
18	Backergunge	„ 9, '92	0·48	Weather—hot. State and prospects of crops unsatisfactory. Rain much wanted. Ordinary rice sells at from 10 to 14 seers per rupee. Fodder sufficient, but good drinking water scarce.
19	Mymensingh	„ 9, '92	1·90	Weather—very hot. Prospects of standing crops fair. Sowing of *aus* and jute has commenced. Common rice sells at from 13½ to 16 seers per rupee. Supply of fodder and water sufficient. Condition of cattle good.
Rajshahi Divn.				
20	Dinajpur	„ 9, '92	0·94	Weather—hot; mornings still cool. Rain has improved prospects. Sowing of *bhadoi* and jute continues. Price of rice at Sadar 12 seers per rupee. At Thakurgaon prices fell from 10 to 12 seers, and the Subdivisional Officer reports a very favourable turn for the better in prospects. Condition of cattle fair. Supply of fodder and drinking water fair.
	Thakurgaon	...	0·66	
21	Rajshahi	„ 9, '92	1·17	Weather—getting warmer every day. Rain has done some good to the cultivation of jute, *aus* and *aman*, which is going on briskly. Rain is still badly wanted for these crops. *Rabi* harvest over. Supply of fodder and water sufficient. Condition of cattle good, except a few cases of small-pox reported from Nator thana only. Price of rice varies from 11 to 15 seers per rupee.
	Nator	..	0·70	
	Nowgong	...	0·30	
22	Rangpur	„ 9, '92	Nil	Weather—varies from sultry heat to comparatively cool weather. Prospects unchanged. Sowing of *aus* paddy and jute continues. *Rabi* is being harvested. Outturn of sugarcane averages 15 annas and of tobacco 11 annas. Price of common rice about 12 seers per rupee. Fodder sufficient.
	Gaibanda	...	1·17	
	Nilphamari	...	0·02	
	Kurigaon	...	Nil	
	Ulipur	...	Nil	
23	Bogra	„ 9, '92	1·05	Weather—generally fine and hot, with variable winds. *Aus* rice and jute have sprouted in some places, and these plants and sugarcane are doing well. The plentiful rain has enabled the cultivators to plough a great extent of land, and this is the most important matter now. Common rice is selling on the average at 13 seers a rupee.
	Sherpur	...	0·51	
24	Pabna	„ 9, 92	0·21	Weather—cool in the morning and hot during the day. Recent rain has facilitated the sowings a little, but more rain is wanted. Rice sells between 12 and 13 seers per rupee. Fodder and water-supply sufficient everywhere, except in Dulai.
25	Darjeeling	„ 9, 92	1·46	Weather—fair. There has been general rain in the district, but more is needed in the Terai.
26	Jalpaiguri	„ 9, '92	1·33	Weather—hot and cloudy at times. Cultivation of jute and *aus* going on. Recent rain has facilitated agricultural operations generally. More rain wanted. Common rice sells at from 8 to 11 seers per rupee. Cattle-disease reported from thana Boda. Fodder and water-supply still sufficient.
BIHAR.				
Bhagalpur Divn.				
27	Monghyr	„ 9, '92	0·02	Weather—cooler in the early part of the week, but very warm in the latter part. Ploughing going on. Some *karaoti* rice sown after the shower of the 3rd in the north-east. Neither mango nor *mahua* promises a good outturn. Good outturn of sugarcane. *Cheena* coming up well. Water getting scarce, and fodder also, in places.
	Begusarai	...	Nil	
	Jamui	...	Nil	
28	Bhágalpur	„ 9, '92	0·21	Weather—seasonable. Rain has done good to *cheena* and sugarcane and has helped ploughing of high lands and brought up the rice sown in low lands. More rain much wanted, especially in the north. Cattle healthy. Fodder sufficient. Water low.
29	Purnea	„ 9, '92	1·00	Weather—seasonably hot. East winds. *Rabi* harvest nearly complete. The late rain was of much use for ploughing and sowing *bhadoi*. From Kishanganj it is reported that *kauni* and jute are doing well, and that prices went down 1 seer after the rain. In some parts of the south of the district as much as an inch and a half of rain fell. No scarcity of water or fodder. Prices of common rice:— Srs. Sadar ... 11 to 11½; Kishanganj ... 11; Araria ... 12 } per rupee.
	Kishanganj	...	0·92	
	Araria	...	0·04	
30	Malda	„ 9, '92	0·30	Weather—very hot since last 2 days. Rain fell on the 4th and 5th and the weather was cool on those days. The rainfall of the 4th has done much good to the *boro* rice which is coming into ear, and also to the mango crop. Sowing of *bhadoi* crops has commenced in some places. Supply of fodder sufficient. No cattle disease. Tanks and wells drying. Coarse rice sells at 11 to 13 seers a rupee.
	Chanchal	...	0·25	
	Shibganj	...	1·38	
	Gajol	...	0·6	
31	Sonthal Parganas	„ 9, 92	Nil	Weather—hot and sultry. Winds easterly and southerly. Rain on the east side. *Mahua* and mango crops not turning out well. Sugarcane secured in Godda. Cultivation going on in Rajmahal and Pakur. Fodder and water getting scarce on west side (Deoghur, Jamtara and west of Dumka). Price of rice from 11 to 14 seers per rupee. Pinching felt in parts of Dumka.

No.	District and date of return		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—contd.				
Patna Division.				
32	Patna	April 9, '92	Nil	Weather—hot. East wind prevailing. Threshing and winnowing of *rabi* in progress. Lands being prepared for *cheena* and *bhadoi* crops. Common rice selling at from 11 to 13 seers per rupee.
33	Gaya	„ 9, '92	Nil	Weather—warm. East wind for most of the week. Harvesting of *rabi* crop completed. Prices of food-grains stationary. Supply of fodder and water yet sufficient, except in some villages of Aurangabad subdivision.
	Nawáda	...	Nil	
	Aurangabad	...	Nil	
	Jahánabad	...	Nil	
34	Shahabad	„ 9, '92	Nil	Weather—cooler, with cloudy sky and westerly winds. *Rabi* crops are being threshed and winnowed. Results, all things considered, are fair. Sugarcane is being planted out extensively and irrigated. Millets are also being sown to some extent. Prices stationary. Fodder and water abundant.
	Buxar	...	Nil	
	Bhabhua	...	Nil	
	Sasarám	...	Nil	
35	Darbhanga	„ 9, '92	Nil	Weather—hot. East wind prevailed during the week. *Rabi* harvest virtually over. Lands being prepared for *mung* and *dhan*, but rain badly wanted. Country very dry, and water and fodder getting scarcer daily.
36	Muzaffarpur	„ 9, '92	Nil	Weather—hot, with light east winds. *Rabi* harvest completed. Field work practically at a standstill. Prices slightly rising. Water in tanks getting low, but no practical inconvenience reported except in Lalganj.
	Hajipur	...	Nil	
	Sitamarhi	...	Nil	
37	Saran	„ 9, '92	Nil	Weather—hot and seasonable. East winds till the 8th. *Rabi* harvest nearly over. Opium weighments in full swing. Rain wanted for indigo. Prices of common rice:— Chapra ... ... Srs. 11¼ } Siwán ... ... 13 } per rupee. Gopalganj ... ... 13 }
38	Champaran	„ 9, '92	Nil	Weather—hot with east and west wind. *Rabi* harvest nearly completed. Opium weighments just commenced. Indigo not doing well for want of moisture. *Kodo, arhar, dhan, marua, sawan, mung, &c.*, are being sown. Fodder and water sufficient. Prices rising on account of exportation.
ORISSA.				
Orissa Divn.				
39	Cuttack	„ 9, '92	Nil	Weather—hot. Rain badly wanted throughout the district for ploughing. Fodder-supply decreasing in parts for want of rain. Price of common rice 10 seers 11 chitak to 18 seers 6 chitaks per rupee. Cattle-disease prevailing in parts of the district.
40	Puri	„ 7, '92	Nil	Weather—seasonable. Cultivation for the ensuing paddy crop going on. *Dalua* crop is being harvested. Miscellaneous crops doing well. Common rice sells at from 10 to 17 seers per rupee.
41	Balasore	„ 9, '92	Nil	Weather—hot and dry. Rain is urgently required both for drinking purposes and to enable the raiyats to begin ploughing. Rice sells at 14 seers per rupee at Balasore and 16 seers at Bhadrak.
CHOTA NAGPUR.				
Chota Nagpur Divn. — *South-West Frontier Agency.*				
42	Hazáribágh	April 9, '92	Nil	Weather—very hot. *Mahua* yielding abundantly. Prospects of mango continue favourable. No other crops. Fodder and water beginning to fail in places. Common rice selling at from 12 to 14 seers per rupee.
	Giridi	...	Nil	
43	Lohardaga	„ 9, '92	Nil	Weather—hot. No crop on the ground. Common rice selling at 13 seers per rupee. Fodder and water sufficient.
44	Palámau	„ 8, '92	Nil	Weather—abnormally hot in the day and cold in the latter part of the night. Harvesting of *rabi* almost finished; outturn estimated at four annas. Sugarcane doing well but wants rain. *Mahua* and mango doing well; outturn estimated at twelve annas. Price of common rice 14 seers per rupee. Supply of water and fodder gradually diminishing.
45	Singhbhum	„ 9, '92	Nil	Weather—hot; cloudy; slight rain in Kalkapur thana. *Mahua* and mango crops promising. Price of rice from 14 seers in Chaibasa to 20 seers in Dumria. Water and fodder sufficient.
46	Manbhum	„ 9, '92	Nil	Weather—still very dry. *Mahua* crop all round will not be more than a 12-anna one. Prospects of mango indifferent. Prices steady. Fodder still sufficient, but the excessive drought is very materially affecting the water-supply.
	Gobindpur	...	Nil

STATISTICAL DEPARTMENT,
The 9th April, 1892.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of March 1892.

	Inches.	Date.	Hour.
The mean pressure of the month	29·767		
The average pressure of March from 24 years' registers ...	29·869		
The highest pressure in the month	30·006	6th	10
The lowest pressure in the month	29·519	28th	16
The range of pressure	0·487		
	Hours.		
The total number of hours of bright sunshine during the month	273·7		
The maximum possible number of hours of sunshine ...	371·3		
	ϴ		
The mean temperature of the month	80·0		
The average temperature of March from 24 years' registers	80·6		
The highest temperature in the month	100·8	21st	
The lowest temperature in the month	53·8	1st	
The range of temperature during the month	47·0		
The mean daily range of temperature	25·5		
The greatest range of temperature in one day	35·7	11th	
	Per cent.		
The mean humidity of the month	61		
The average humidity of March from 24 years' registers ...	66		
	Inches.		
The mean vapour tension of the month	0·610		
The average vapour tension of March from 9 years' registers	0·702		
The mean cloud proportion of the month	1·17		
The average cloud proportion of March from 15 years' registers	2·46		
The total rainfall of the month	Nil		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	Nil		
The average fall of March from 48 years' registers ...	1·34		
The greatest fall in 24 hours	Nil		
	Days.		
The number of rainy days in the month	Nil		
The average number of rainy days in March from 24 years' registers	4		
	ϴ		
The mean maximum equilibrium temperature of solar radiation during the month	148·3		
The mean difference of sun and air temperatures	54·4		
The greatest sun temperature	155·1	18th	
The greatest excess of sun over air temperature	57·5	27th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	61·8		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	7·0		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	11·6	6th	
	Miles.		
The mean movement of the wind per day	157·9		
The greatest movement of the wind in one day	341·0	29th	
The greatest movement of the wind in one hour	21	30th, 11 to noon.	

The number of hours with winds from each of the 8 points—

N. 24, N.E. 4, E. 1, S.E. 8, S. 182, S.W. 322, W. 101, N.W. 75, Calm 27.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 1·0° lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF MARCH 1892.

SETTLED weather, almost without interruption, has prevailed throughout the month, but the more important meteorological elements have all varied largely from their normal values.

The most notable variations are—

1. Pressure has been steadily below the normal, defect increasing towards the end of the month, till it was over ·1 inch at nearly all stations. The mean defect for the whole of March is between ·08 inch and ·1 inch except in Orissa, where it is somewhat lower.

2. Temperature during the early part of the month was very low, but owing to the hot westerly winds and cloudless skies it rose rapidly and became unusually high for the season.

3. Humidity and cloud proportion were both low, the former by about 10 per cent. and the latter by 50 per cent.

4. Rainfall was almost entirely absent except on the 5th and 28th, when showers fell in East Bengal and part of North Bengal, but in the other districts it has been either absent or very light. Sibsagar received nearly 9 inches and the other stations in Assam between one and two inches.

At the beginning of the month a shallow depression passed over the province from the west. Pressure began to fall in Bengal on the 2nd, and continued to change moderately till the 4th, when the low-pressure area was over North Bengal. Defect was nowhere more than a tenth of an inch, and though the depression was accompanied by a fairly complete cyclonic circulation of winds, its influence was very slight in causing the formation of cloud and rain. In the western districts a few very light showers fell, chiefly in Orissa, but on the 5th more general and heavier rain fell in East Bengal. After the depression had passed eastwards temperature and humidity fell rapidly, and westerly winds again set in. The difference in temperature from the normal was very slight during the day, but defect in night readings was at some stations more than 6° and at nearly all more than 3°. The mean defect for the first week was nearly 3° for the whole province. From the 5th till towards the end of the month clear dry weather prevailed with no important change except in temperature which continued to fall till the 7th, and then steadily rose. As the downward change was chiefly in the night temperatures, and the rise had most effect during the day, the range during the second week was very large. On the 6th and 7th minimum readings were below 50° at several stations in North Bengal, and below 55° at many stations in all districts, while maximum readings were generally about 85°. Till the 12th, the only stations reporting readings of more than 100° were Cuttack and Midnapore. From the 12th to the 19th excess increased, especially in Bihár, where it was more than 80°, and the highest maximum reading for the period was between 100° and 105° at nearly all stations in the western half of the province. Humidity continued low, the sky practically cloudless, and pressure underwent the small oscillations usual in fine weather, but continued on an average considerably below the normal Similar conditions prevailed till the 25th, when wind directions began to change owing to a shallow low-pressure area forming over the east of Bihár and part of West Bengal. Though pressure rose again, and the depression almost disappeared, south-easterly winds continued, and humidity became high. Weather was generally fine, but a few local storms occurred, chiefly in North Bengal. The disturbed conditions moved eastward, and local storms occurred at nearly all stations in East and North Bengal on the 28th, accompanied in some cases by heavy rain, but by the 29th they had almost entirely ceased, and during the last two days fine-weather prevailed. While the depression existed strong southerly winds blew at the head of the Bay and over the province.

Pressure—As stated above, has been below the normal throughout almost the whole month. Occasionally for a short time there was a small excess, but the weekly means have been steadily below the normal by between a twentieth and a tenth of an inch. For the first week there was defect of from ·03 inch to ·05 inch at all stations. Up to the 12th there was practically no change, the same small defect prevailing in the lower districts, while at some of the northern stations it had increased to ·08 inch. After this the deficiency increased, and for the week ending on the 19th the average difference from the normal varied from ·07 inch in Orissa and Chota Nagpur to ·13 inch in the north of the province. This distribution continued till nearly the end of the month, when there was a general slow rise, but a considerable defect still remained.

Temperature—The details of the changes of temperature have been given above. The mean for the month is considerably above the normal in all districts except Orissa, where it is exactly normal. Excess in South Bihár is 2·2°, in Chota Nagpur 1·7°, in South-West and North Bengal 1°, and in North Bihár and Assam nearly 1°.

The following table shows the principal variations of the day, night and mean temperatures from the normal in each week of the month at nine typical stations in different districts of the province:—

Stations.	Week ending 5th March 1892.			Week ending 12th March 1892.			Week ending 19th March 1892.			Week ending 26th March 1892.			Week ending 2nd April 1892.

Rainfall.—Fairly general but light showers fell in East Bengal on the 5th, and a few very light scattered showers in the other districts on the 4th and 5th, after which there was no rain anywhere in the province till near the end of the month. On the 28th general and in most cases moderately heavy rain fell in East and North Bengal and in Murshidabad, Purnea, North Bhágalpur and part of Darbhanga, South Bhágalpur, and Sonthal Parganas. A few showers fell on the 27th in Rangpur and Kuch Bihar, and scattered rain continued in Mymensingh, Jalpaiguri, Kuch Bihar, and the Darjeeling Hills till the end of the month. In consequence of the heavy falls on the 28th, North Bengal received a quarter of an inch more than the normal fall for the month, but in all the other districts there is a large deficiency varying from ·2 inch in North Bihár to 1·88 inches in East Bengal.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of March 1892 :—

Meteorological Divisions.	Temperature.						Rainfall.							
	Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month.	Of month.			Rainy days.			Since 16th Oct. 1891.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in month.	Normal average number in month.	Variation.	Average.	Normal average.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 9th of April 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District Observations. Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 1st April 1892. Mean for district.	Since 1st April 1892. Normal mean.	Since 1st April 1892. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 12th April 1892.*

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 9TH OF APRIL 1892.

AT the beginning of the week pressure was above the normal in all districts, excess being small in Chota Nagpur, whence it increased towards the north-east. In consequence isobars ran nearly north and south, and a strong easterly circulation of winds prevailed in the north of the province, while in the south and west the westerly element in the wind directions was either absent or very faint. Temperature was high, especially in the northern districts, and fine clear weather prevailed. The pressure distribution remained unchanged on the 4th, but unsettled conditions developed in Assam and North Bengal. Local storms were frequent, and moderately heavy rain fell at nearly all the north-eastern stations accompanied by a rapid fall in temperature. Pressure also began to give way, and a brisk fall continued for three days, after which the distribution was practically normal. The thunderstorms spread towards the south-west, and were fairly general in Lower Bengal on Monday the 4th, causing almost general but very irregular rainfall. The period of disturbance was soon over, and though pressure continued to fall, only a few light scattered showers were reported after the 5th. On the 7th the relative difference of pressure at eastern and western stations was much smaller, and dry south-westerly winds recommenced in South-West and East Bengal. The temperature had continued high during these days in Bihár and Chota Nagpur, where very little rain fell. After the storms ceased in the other districts there was a quick rise, and by the 8th readings were everywhere as high or higher than at the beginning of the week. The steady fall of pressure continued till the end of the week, on the last day of which readings were everywhere below the normal, the largest defect being in North Bengal. The easterly current over North Bengal and North Bihár was weaker, and directions had changed to west at most of the stations in South Bihár. With this change of winds temperature rose rapidly, especially in Chota Nagpur and Orissa, and excess at the end of the week varied from 1° in the east of South-West Bengal to nearly 9° in the west of Bihár.

Pressure—As stated above, was very high during the first three days of the week, when excess ranged up to ·15 inch in North Bengal and Assam. As at that time excess in Chota Nagpur was only about ·02 inch, gradients were much steeper than usual from west to east. The brisk fall that set in about the middle of the week continued to the close, and the distribution then differed very little from the normal, defect being more than ·05 inch only at a few stations in North Bengal. The means for the week are above the normal at all stations by amounts varying from ·02 inch in Chota Nagpur to 07 inch in North Bengal and North Bihár.

Temperature—Continued very high in the western half of the province, and was above the normal in the eastern districts, except between the 4th and 6th when local storms occurred. In Bihár and Chota Nagpur excess was unusually large, ranging in places up to 8°. In East and North Bengal mean excess is 1°, in Orissa and South-West Bengal 1·2,° in Chota Nagpur and North Bihár nearly 4°, and in South Bihár 4·1°. The lowest temperatures were registered on the 4th and 5th except in Orissa, part of South-West Bengal and part of North Bihár where they occurred on the 6th and 7th. The highest readings were on the 9th at nearly all stations.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 9th April 1892.

	Normal mean maximum temperature for the week ending 9th April.	Actual mean maximum temperature for the week ending 9th April 1892.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 9th April.	Actual mean minimum temperature for the week ending 9th April 1892.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 9th April.	Actual mean daily temperature for the week ending 9th April 1892.	Variation of actual mean from the normal.

Darjeeling	60·7	59·4	—1·3	46·1	51·0	+4·9	53·4	55·3	+1·9

Rainfall.—Showers began in North Bengal on the 4th and extended on the 5th over the greater part of the province. The falls were general and moderately heavy at the northern stations, but towards the south and west they became much lighter and more scattered. No rain fell in Chota Nagpur, and only a few very scattered showers in Orissa and South Bihár. The only rain reported from North Bihár fell in Purnea and North Bhágalpur. The average falls for the week are below the normal except for North Bengal, where nearly twice the normal fall has been received, and Orissa, where the amount is practically normal. For Bihár the average is less than ·1 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 9th of April 1892:—

Meteorological Divisions.	Temperature.						Rainfall.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast ; g, gloomy ; d, drizzling rain ; t, thunder ; <, lightning.

The revised Bengal Famine Code published in the *Calcutta Gazette* of the 20th January 1892.

Correspondence with the Commissioners of the Patna, Bhágulpur and Rajshahi Divisions, regarding the present scarcity in parts of those Divisions.

THE Lieutenant-Governor finds there are certain points in which the Revised Famine Code is not precisely suited to the exact stage of distress which has been reached at present in Bengal. It does not seem necessary to alter the Code; but the following instructions are meant to show in what respects it may, for the time, be modified with advantage.

CLASSIFICATION OF WORKS.

2. The terms, Civil Agency Works and Professional Agency Works, used in the Code, are not very suitable to the conditions of Bengal, where the Professional Agency, *i.e.*, the Public Works Department, is weak, and the Collector of the district has at his side the District Engineer and his staff who are able to give professional help in any work he sets going with funds supplied by the District Board. It is necessary, however, to adhere to those terms, which are suitable to other provinces of India, with this explanation.

Professional Agency Works are works carried out with Provincial funds and under officers of the Public Works Department. They will generally be large works, such as railway branches, canals, &c. There are at present no such works started in the affected districts.

Civil Agency Works are those which are carried out by the Collector, with such help as he requires from the District Engineer and his subordinates, and with funds supplied by the District Board. They include what were formerly called agricultural works, and consist generally, as explained in section 26 of the Revised Code, of the construction of new roads, the raising or enlargement of old roads, the construction or renewal of tanks, drainage channels, irrigation channels, and embankments. All relief works now carried on in this province belong to this class.

CLASSIFICATION OF WORKERS.

3. The Revised Famine Code (section 31) divides labourers on relief works into—

A—Able-bodied persons accustomed to labour.

B—Able-bodied persons not so accustomed.

C—Persons not able-bodied, but fit for light employment.

Also under section 53, infirm persons dependent on the labourers are allowed to remain on the relief work, and receive the minimum wage (see also column 17, Form I, page 32, of Revised Code).

The Government of India has recently called for a monthly report in which the numbers on relief works are shown in four classes, the Class A as above defined being sub-divided, thus—

I—Able-bodied persons accustomed to labour of the kind required on relief work.

II—Able-bodied persons accustomed to labour, but not to labour of the kind required on the relief work.

It is obvious that in both these cases the classification requires some knowledge of the past life-history of the labourer. This is difficult to get, and can hardly be got with sufficient accuracy to be of use: if the labourer has any suspicion that the information he gives will be turned against him, he will try to deceive the enquirer by giving false replies as to caste and village: and if the classification is left to the officer in charge of the Relief Work, it will not be uniform. As a matter of fact, His Honour finds that the classification practically adopted on almost all the Relief Works he has visited is as follows:—

(*a*) *Persons who are paid by piece-work.*—A pit containing so many cubic feet of earth is measured off for a gang of labourers, and when it is finished they are paid the stipulated sums, provided that they do not thereby receive more than the maximum daily wage for the number of days employed on the work.

(*b*)—*Persons who are paid by task work*—Their work is similarly demarcated for them, and they are stimulated to do what is held to be a fair day's task for people of their calibre for a three-quarter wage. If they do less, they are fined, but never get less than the minimum wage.

(*c*)—*Persons who are paid by daily labour.*—Their work is not measured, but they are encouraged to do what they can, and they receive the minimum wage.

4. This classification is the result of the natural selection of the fittest, and is in accordance with facts, and His Honour thinks it may be accepted. During the present stage of affairs, and till further orders are issued, the labourers will be classed in this way, and the daily register and the weekly return sent into head-quarters will be filled up on the understanding that A, B, and C are interpreted as above. In the monthly return supplied to the Government of India, the first three of the columns shewing number of labourers will be taken as equivalent to A, B, C, as above, and the fourth column will contain the infirm dependants mentioned in section 53 of the Revised Code.

It further seems desirable, and in accordance with facts, to divide children, that is, young persons of either sex who are approximately below 14 years of age, into two classes, big children (say above 8) and small children. The former are seen handling a kodali or carrying a small basket; the latter often

carry clods of earth on their heads, but hardly assist appreciably in the outturn of work. They should, however, be counted in the muster-roll and receive a small wage.

PIECE-WORK.

5. The system of piece-work is encouraged by section 35 of the Code, but only faintly. The reason is that the Code contemplates a much worse state of things than at present exists. So far as Sir Charles Elliott has seen, the distress in Bengal has been taken in time. The people are as fit to work and as strong as they ever were. He has not met with half-a-dozen cases which showed any signs of emaciation or weakness due to hunger. In these circumstances piece-work should not only be encouraged, but insisted on as the general rule; probably about nine-tenths of the labourers should be classed as A, and the rest as B and C. Officers in charge of relief works should do their utmost to distribute all their able-bodied labourers into small gangs, allotting to each a pit which will occupy them at least one day, and, better still, two or three days at the end of which the work will be measured and they will be paid.

THE AMOUNT OF WORK TO BE DONE.

6. Mr. King's formula,* which has been circulated with the Commissioner of Patna's report of the 21st March, is based on the assumption that—

* $R = W(A + \frac{L+50}{12 \cdot 5})$.

(1) a man can cut 100 cubic feet of hard soil in a day; 150 of soft soil;
(2) a man can carry 125 cubic feet of soil for 50 feet in a day, with a 5-foot lift;
(3) he can carry the same quantity for an additional 100 feet in another day.

Allowing for a woman doing a little less carrying than a man, we may lay down the following rule:—

A man and woman working together can cut and carry 100 cubic feet for a 50-foot lead, and a man and two women can do the same for a 150-foot lead. Therefore, the piece-work rate for 100 cubic feet should be the maximum ration wages for a man and woman for a 50-foot lead, and similar wages for a man and two women for a lead exceeding 50 feet, or a lift exceeding 5 feet.

In the case of task-work, which is only permitted for persons of a slightly inferior physique, it will be necessary to allow a further margin: for instance, it might be said that 100 cubic feet is the daily task for one and two women (or a man, a woman and a child), and a similar addition should be made for any increase in the lead.

THE WAGE.

7. The mode of calculating the wage, *i.e.*, the value of the full or portional ration, is elaborately descirbed in Chapter XIV of the Revised Code. It is not, however, desirable ever to fix the wage in pies, a coin not commonly used in the villages. Nor is it desirable, having once fixed it, to raise or lower it according to any minute variations in the market, that is, by less than a pice at time. Moreover, prices are so even now over the whole distressed area that in districts it seems possible to fix a uniform wage for all districts in Bihár and North Bengal, and thus to avoid the danger of emigration from the neighbourhood of home to a district where the labourer may be told he will receive a higher wage. The only difference that seems needful to make is this, that where cheaper grain, such as marwa, kurthi or makai are procurable, and are the customary food of the people, the calculation should be made for a ration compounded of those grains, or for a ration compounded half of rice and half of some cheaper grain, and not for rice alone. Details are given in Appendix, showing how the different value-rates are worked out.

The Lieutenant-Governor thinks it will, therefore, be proper to decide that for the present, and till further orders, the following wages be given—

A.—In districts where coarse rice is the usual food, or the only food easily procurable—

	Man.	Woman.	Big child.	Small child.
	Pice.	Pice.	Pice.	Pice.
Full ration wage ...	6	5	3	2
Three-quarter wage ...	5	4	2	1
Minimum wage ...	4	3	2	1

B.—In districts where cheaper grains are procurable, and are the usual food of the labourers—

	Man.	Woman.	Big child.	Small child.
	Pice.	Pice.	Pice.	Pice.
Full ration wage ...	5	4	3	2
Three-quarter wage ...	4	3	2	1
Minimum wage ...	3	2	1	1

The Commissioner of the Division will decide whether a district should be classed as A or B.

8. It will follow from this that the piece-work and task-work rates should be fixed, so as to approximate as nearly as possible to the following figures:—

	PER 100 CUBIC FEET WITH A 50′ LEAD.		PER 1,000 CUBIC FEET WITH A 50′ LEAD.	
	A districts.	B districts.	A districts.	B districts.
	As.	As.	Rs. A.	Rs. A.
Piece-work ...	2¾	2¼	1 11½	1 6½
Task-work ...	3¼	2½	2 0½	1 9

with five and four pice added in A and B districts, respectively, for every additional 100 feet of lead.

These figures, however, are given only as a general indication, and in order to attain some degree of uniformity, and avoid such differences as a recent report disclosed, where one district was paying for piece work 1 anna per 100 cubic feet, and another was paying 3 annas. It is not intended hereby to fetter the discretion of Collectors, who must fix the rates for piece-work on the basis of actual observation of what the labourers can do and earn.

9. It should be understood, in case professional workers like bildars, nunias, &c., who could perhaps do double the calculated tasks in a day, come on the works, that no one is permitted to earn more in a day than the maximum daily wage as above calculated.

10. Prices must, however, be carefully watched, and if any rise or fall in the market rates, sufficient to alter the calculated value of the ration-wage by one pice, takes place, the alteration should be made by the Collector, and reported immediately for the approval of the Commissioner, and the fact should be noted in the next half-monthly report.

11. These figures apply mainly to the task of cutting and carrying earth, as in excavating a tank, or in throwing up a raised road. In the latter case the work of patting and consolidating the earth should be given to C, that is, daily labour people; the final dressing and making up must be done by the practised workmen of the District Engineer, not by relief labour.

REGISTERS AND RETURNS.

12. Four registers are required on a relief work—

First, the muster-roll, on which the attendance of the labourer for every day of the month will be entered. The arrangement should be—*firstly*, the mate in charge, and *secondly*, the village: under each village the names of the labourers should be entered, with the caste and class and description of each (*i.e.*, men, women, big child, or little child, and, A, B or C); a mate can generally hold charge of about 100 labourers.

Second, the muster-roll of infirm dependents allowed on the work under section 53 of the Revised Code, receiving the minimum wage.

Third, the measurement-book for piece-work or task-work. This shows the people by gangs, and the work done each day. Each pit should be numbered, and the number given it in the book should be scratched on the bottom of the pit, so that an Inspecting Officer coming round within the next two or three days, may be able to test the entry in the book by actual measurement.

Fourth, the Daily Registers showing for each day of the month the number of labourers, A, B, and C, the work done, and the money paid. (This supersedes Form I of the Relief Code). The total of column 24 in this register

should agree with the daily total of the muster-roll, and the figure in column 11 should agree with the total of column 6, in the measurement-book.

Copies of these forms, filled up with exemplar figures, will be found in the Appendix.

13. The Daily Register should be written up every day by the relief work officer; and on the last evening of the week he should send a copy of the week's figures to the Collector or the officer to whom he is immediately subordinate, arrangements being made that the return may certainly reach the district head-quarters by Monday evening. This may be effected by sending in a special messenger or by the district dák. If necessary, a staff of dák runners may be put on for the purpose and charged to the Zamindari Dák Cess. This copy of the Daily Register supersedes Form No. 2, page 33, of the Revised Code.

GRATUITOUS RELIEF.

14. No modification is required of the instructions in Chapter III concerning gratuitous relief, except as regards the provision in section 22 that the dole should be of flour. In this province flour is not commonly used. The dole should be of rice, or marwa, or kurthi, or makai. Where the cheaper grains can be easily procured, and are commonly eaten by the people, the dole may be confined to them; elsewhere it may consist half of rice and half of makai or other cheaper grain, if procurable.

Three registers of gratuitous relief are required, and the forms are given in the Appendix.

The first is the Register of Relief. It shows, village by village, the name of each recipient, the age and sex and caste, causes of disability, and the signature of the investigating officer. It provides also for the removal of the name.

The second is the muster-roll, and shows briefly who attended at each distribution, the total number, and the amount distributed.

The third contains the names of those who receive cotton to spin or any other work of the kind, the quantity given out and the quantity returned, with date.

Each person entered in the register of gratuitous relief should receive a stout card-board ticket, about four inches square, showing the circle number, village number, and name.

15. The Lieutenant-Governor finds that the practice recommended in section 22 of the Code, of giving to the paupers tickets entitling them to receive the dole from a bunnia, is not approved in this province, and the practice everywhere appears to be to make the distribution at fixed centres on a fixed day before a responsible officer, such as a Deputy Collector or Sub-Deputy Collector. This is undoubtedly the better way, so long as the numbers are small enough to admit of it.

16. The officer in charge of this form of relief must send in weekly a return showing the number of persons on gratuitous relief—men, women, and children, and the amount disbursed. This must be made up to the close of the last day of the week, and must reach the district head-quarters by Monday evening. The arrangements for forwarding this return will be the same as those described in paragraph 13 of this note, above.

REPORTS AND RETURNS OF FAMINE RELIEF SENT BY DISTRICT OFFICERS TO THE COMMISSIONER OR TO GOVERNMENT.

17. The Collector has two returns to submit:

One is a weekly one, to be sent by telegraph to Calcutta to the Under-Secretary, Revenue Department, every Tuesday, in order that it may be embodied in a report which the Bengal Government has to submit to the Government of India every Wednesday. It contains the following figures for the preceding Saturday:—

	Men.	Women	Children	Total
On relief works				
On gratuitous relief				

The figures of the first line will be supplied from those against the last day in the week in the return sent in by each Relief Work officer under paragraph 13 above, and those of the second line from the figures sent in by each officer in charge of gratuitous relief under paragraph 16 above.

Each Collector must fix the last day of the week for each relief work and relief circle, with reference to its distance and the route the return has to take, so that it may reach district head-quarters by Monday evening. As far as possible, the work should be made to end on Saturday. But if the return for such a week cannot reach head-quarters by Monday, then Friday or even Thursday must be fixed. But punctuality in the receipt of these two returns every Monday evening is essential.

18. The second is a half-monthly report. It should be despatched on the 2nd and 16th of each month, and should reach the Commissioner by the 4th and 18th. In every three months five of these reports will be based on the weekly figures of two weeks, and one on the figures of three weeks. Each report should therefore begin by saying: The figures of this report relate to figures of the weeks ending so and so, and so and so. The reports which at present reach Government are excellent of their kind, and need but little alteration. The Government of India desires that attention should be paid to the monthly death-rate, especially if there is any reason to believe that any increase in it is due, directly or indirectly, to famine; and each report should contain abstracts from the weekly returns sent in from each relief work, showing the average number of labourers (A, B, C, and total) on the work during the week; the total earthwork done, total expenditure (see paragraph 13), &c. For gratuitous relief a statement should be drawn up, showing for each circle the number of persons receiving doles, men, women, and children, and the total expenditure of the week (as in paragraph 16).

19. With the second half-monthly report for each month, a map showing the affected area in the district should be submitted in duplicate, the tracts seriously affected being coloured dark-blue, and those slightly affected light-blue. Also the two statements desired by the Government of India should be submitted. Copies of these are attached to this Resolution. In Statement A, the first five columns should be filled up once for all. Columns 6, 7, 8 are the total number of A, B, and C labourers on the last day of the last week of which the return has been received, and column 9 will be the figure in columns 17 and 18 of the weekly return for dependents. Column 11 will be the total number receiving doles in the last preceding week. In columns 12, 13, 14 should be entered coarse rice, and such other cheap grains as are used for food by the labourers, *e.g.*, marwa, kurthi, makai, at present. Column 15 should show the district death rate which the Collectors should obtain direct from the Civil Surgeons, the name of the month for which the figure is given being written above it.

In Statemennt B, columns 1 and 2 will be filled up once for all; column 3 will be blank as the programmes have not been gazetted.

Column 4 will show works employing 300 persons and over for three months; column 5, the smaller works.

Columns 6 and 7 will be columns 4 and 5 minus the numbers shown as employed on relief works from the beginning up to date. Columns 8, 9, 10, 11, 12 will henceforth contain figures of expenditure, starting from 1st April 1892.

Column 13 will not be filled up, unless the land revenue has been suspended by a definite order of Government or of the Board of Revenue.

ORDER—Ordered that this Resolution with its appendices be published in the *Calcutta Gazette*, and that copies of it be forwarded to the Commissioners of the Patna, Bhágalpur, and Rajshahi Divisions for communication to the Collectors of their Divisions.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

APPENDIX I.

Bases of calculating the money-value of the ration-wage.

The principal item of food being, per rupee	Seers 18.	Seers 17.	Seers 16.	Seers 15.	Seers 14.	Seers 13.	Seers 12.	Seers 11.	Seers 10.	Seers 9.	Seers 8.

N. B.—This roll is to be written up by the officer in charge of the work or by the mate every morning.
Column 1—Should contain a serial number for all the villages in one mate's charge.
Column 4.—Enter M., W., B. C., and S. C., for men, women, big child and small child.
Column 5.—Enter A. B. or C. according to class of work performed.
Column 6.—Enter p. for present and a. for absent, or corresponding letters in Kaithi; or else enter here, for those present, the letter A B or C, leaving a blank for the absent. This will enable the officer to show when a labourer has been moved from one class to another during the month.

B.

Muster-Roll of infirm persons and dependents present on relief work under section 53 of the Code, but doing no real work.

1	2	3	4	5	6	7																													
						ENTRY OF ATTENDANCE.

The figures in columns 4, 5, 6, and 7 should be the number of labourers who can be employed for three months on the works.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 16th April 1892.

Division	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.					
Burdwan Divn.	1	Burdwan	April 16, '92	0·34	Weather—fair and warm. Strong wind blowing. Rain has fallen at Sadar and Katwa, and will do some good to cultivators. More rain wanted. Prices of common rice:— Srs. Sadar ... ... 13 to 16 per rupee. Kalna ... ... 10 to 13½ per rupee. Katwa ... ... 13¼ per rupee. Raniganj ... ... 13 per rupee.
		Kalna	...	Nil	
		Katwa	...	0·52	
		Raniganj	...	Nil	
	2	Bankura	„ 16, '92	0·55	Weather—much cooled down by the rain and storm of yesterday afternoon (15th). The rainfall of 15th, though small, will facilitate ploughing of fields for the *aus* crop. Condition of cattle fair. Water and fodder insufficient. Common rice is selling at 15 seers per rupee at Bankura and 14 seers at Vishnupur.
	3	Birbhum	„ 16, '92	0·40	A slight thunderstorm with rain yesterday (15th). Tanks are very low and fodder rather scanty. Price of rice 13 to 16 seers per rupee.
	4	Midnapore	„ 16, '92	0·90	Weather—very hot. A stormy wind sometimes blowing. On 15th a thunderstorm followed by some rain. Want of rain has damaged *boro* and other crops. Fodder scarce. Prices of common rice:— Srs. Sadar ... ... 13 per rupee. Contai ... ... 12 per rupee. Tamluk ... ... 12 per rupee. Ghatál ... ... 14 per rupee.
	5	Hooghly	„ 16, '92	0·35	Weather—hot during the day; temperature cools down at evening. Rainfall quite in sufficient for cultivation purposes. State and prospects of crops remain unchanged. Prices almost stationary. Common rice sells at— Srs. Sadar ... ... 10 to 11 per rupee. Jahánabad ... ... 13 per rupee. Serampore ... ... 11 ¾ per rupee.
		Serampore	...	Nil	
		Jahánabad	...	Nil	
	6	Howrah	„ 16, '92	0·48	Weather—warm. Strong south wind. Agricultural prospects unchanged. If the rain of Friday (15th) has been general, it should do good to the *rabi* crops and sugarcane. Fodder and water-supply sufficient. Rice 11 to 13 seers per rupee.
		Ulubaria	...	Nil	
Presidency Divn.	7	24-Parganas	„ 19, '92	0·78	Weather—hot and cloudy with strong wind. The little rain which fell during the week throughout the district has not improved the state of the ground. More rain is wanted. Want of drinking water reported from Sadar, Basirhat and Dum-Dum subdivisions. Supply of fodder sufficient. Prices stationary.
	8	Nadia	„ 16, '92	0·11	Weather—hot with occasional clouds. Ploughing and sowing operations going on, but more rain urgently wanted. Common rice sells at from 11 to 13 seers 14 chitaks per rupee. Condition of cattle good, and supply of fodder sufficient; but there is some scarcity of water.
		Kushtia	...	0·37	
		Meherpur	...	0·08	
		Ranaghat	...	0·02	
	9	Khulna	„ 16, '92	Nil	Weather—hot. Although there was a good shower, more rain is needed for cultivation of *áman* and *til*. Price of rice varies from 12 to 15 seers per rupee. Fodder sufficient, but want of drinking water felt by men and cattle.
		Bágerhat	...	Nil	
		Satkhira	...	Nil	
	10	Jessore	„ 16, '92	Nil	Weather—hot and cloudy with high winds. Rain badly wanted for sowing. Drinking water generally insufficient. Prices stationary.
		Jhenida	...	0·03	
		Magura	...	0·16	
		Bangaon	...	0·12	
	11	Murshidabad	„ 18, '92	1·28	Weather—hot and cloudy. *Rabi* crops almost harvested. Recent rain has improved prospects of *boro* paddy and *bhadoi* crop. Fodder obtainable for cattle. Coarse rice sells at 12 seers per rupee.
Chittagong Divn.	12	Chittagong	„ 16, '92	0·48	Weather—unusually dry; clouds about. More rain wanted for all crops. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali	„ 16, '92	0·38	Weather—hot and cloudy. All *rabi* crops are off the ground except chillies and *mug*; outturn bad. *Aus* sowings have been somewhat facilitated by rain, which however has not been sufficient. Fodder and water getting scarce. No cattle-disease except in Fenny. Price of common rice ranges between 13 and 14 seers per rupee.
		Fenny	...	0·70	
	14	Tippera	„ 16, '92	1·43	Weather—hot and bright. Late rain has assisted ploughing. Prospects improved. Cattle-disease prevalent.
	15	Chittagong Hill Tracts.	„ 14, '92	0·18	Weather—very hot during midday. Chillies being gathered. Transplanting of sugarcané almost over. Fields for *aus* paddy almost ready. *Jum* burning going on. Cattle disease prevailing. Common rice being sold at 10 seers a rupee.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*				
DACCA DIVN.	16	Dacca, April 16, '92	0·04	Weather—very hot and latter part of the week cloudy. Cultivation for early rice going on. Sowing of jute and paddy commenced. Recent rain has done good to standing crops. Fodder available. Condition of cattle fairly good. Common rice selling at from 12 to 15 seers per rupee.
	17	Faridpur „ 16, '92	0·57	Weather—hot. More rain wanted. *Boro* paddy being cut. Outturn only moderate. Rice selling at 14 seers per rupee at Sadar and 13 seers at Madaripur. Cattle doing well and get fodder.
	18	Backergunge „ 16, '92	Nil	Weather—hot. State and prospects of crops very unsatisfactory. Rain much wanted. Ordinary rice sells at from 10 to 14 seers per rupee. Fodder sufficient, but good drinking water scarce.
	19	Mymensingh „ 16, '92	0·16	Weather—very hot. Prospects of *boro* crop not fair, but those of others fair Sowing of *aus* and jute progressing. Common rice 13 to 16 seers per rupee. Supply of fodder and water sufficient. Condition of cattle good.
RAJSHAHI DIVN.	20	Dinajpur „ 16, '92 Thakurgaon ...	0·26 0·10	Weather—cool with easterly wind. Cloudy at times. The rain has done good throughout the district. *Bhadoi* paddy, jute and sugarcane are being sown. Outturn of sugarcane 12 annas. Price of rice at Sadar stationary. Condition of cattle good. Supply of fodder and drinking water fair.
	21	Rajshahi „ 16, 92 Nator .. Nowgong ...	1·64 1·50 0·05	Weather—seasonable. Prospects have much improved owing to recent rain, but more rain is required. Fodder and water-supply generally sufficient. There is but little variation in price of common rice; in fact, prices may be said to remain as before.
	22	Rangpur „ 16, '92 Gaibanda ... Nilphamari ... Kurigaon ...	1·12 Nil 0·82 Nil	Weather—warm during the early part of the week; since then cloudy and cooler. The little *rabi* there is, is being harvested. *Aus* paddy and jute have been sown over a larger area than usual and are doing well everywhere. If no more rain falls now, very good crops are expected. Price of common rice about 12 seers per rupee. Fodder sufficient.
	23	Bogra „ 16, '92 Sherpur ... Naukhila ...	1·24 1·41 0·54	Weather—fine and moderately hot: overcast only during showers. There has been lately more than enough, but not too much rain. From the 25th ultimo to 9th instant inclusive, 6·20 inches have fallen, and it has come soon enough to produce excellent crops of *aus* rice, jute, &c., if the weather of the next few months be favourable. The unusual facilities for ploughing are also likely to have a very good effect on the *áman* rice. In the north-west and in the east of the district *aus* rice and jute have already grown well; elsewhere little *bhadoi* is grown, but ploughing has made great progress. Sugarcane doing well. Prospects for the future are now good. Common rice selling on the average at 13 seers a rupee.
	24	Pabna „ 16, 92	2·12	Weather—cloudy and stormy. Hot during the day. Recent rain has done some good to sowing and ploughing operations, but more is wanted. Common rice sells between 12 and 13 seers per rupee. Fodder and water-supply sufficient everywhere except in Dulai.
	25	Darjeeling „ 16, 92	2·01	Weather—fair with occasional rain. *Bhutta* coming up well. Potatoes progressing favourably. Wheat and barley being harvested. Ploughing continues, helped on by the week's rain, in the Terai. Fodder benefited by rain. Water pretty fair. No cattle-disease.
	26	Jalpaiguri „ 16, '92	0·53	Weather—days hot, nights rather cool. Recent rain has improved prospects. Sowing of jute and *bhadoi* paddy continues. Cattle-disease still reported from thána Boda. Fodder and water-supply sufficient. Common rice sells at from 8 to 11 seers per rupee.
BIHAR.				
BHAGALPUR DIVN.	27	Monghyr „ 16, '92	0·46	Weather—seasonable. Thunderstorm at head-quarters on Friday (15th) afternoon. There has been some seed sown in low lands in the north of the district. Rain wanted. *Cheena* promises well. Condition of cattle still good and fodder sufficient. Water getting very low in tanks and wells.
	28	Bhágalpur „ 16, '92	0·45	Weather—cooler with east wind. The rain has done good to the few crops on the ground, but a heavier fall is wanted to facilitate preparation of heavy lands. Indigo sowings scanty and backward. *Mahua* has improved and is being gathered. Fodder sufficient; water low. Common rice 11 seers 6 chitaks per rupee.
	29	Purnea „ 16, '92 Kishanganj ... Araria ...	0·87 1·46 Not received.	Weather—hot with occasional thunderstorms. Good rain at head-quarters and Kishanganj. *Bhadoi* sowings continue. Fodder and water sufficient. Prices of common rice :— Sadar ... ... 11 to 12 Srs. per rupee. Kishanganj ... ... 11 Srs. per rupee.
	30	Malda „ 16, '92 Chanchal ... Shibganj ... Gajol ...	2·33 0·37 0·47 1·42	Weather—warm and cool alternately on account of the rainfall on the 11th and 15th instant which was general. Rain has done immense good to the standing crops, viz., *boro* rice, mulberry and indigo. Lands are being prepared for *bhadoi* paddy, and in some places sowing has already begun. Prices stationary. Supply of fodder enough. Cattle suffering from leg sore in Old Mulda thána.
	31	Sonthal Parganas „ 16, 92	0·33	Strong easterly winds. Duststorm on Friday (15th) evening followed by thunder and rain. Mango and *marwa* poor. Sugarcane very fair. Cultivation of *bhadoi* paddy in progress at Rajmahal. Fodder and water supplies becoming scarce. Rice selling at from 11 to 14 seers per rupee

No.	District and date of return		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—concld.				
Patna Division.				
32	Patna	April 16, '92	Nil	Weather—hot. East wind prevailing. Threshing and winnowing of *rabi* and weighment of opium in progress. Fields being prepared for *cheena* and *bhadoi* crops. Common rice selling at 13½ seers per rupee.
33	Gaya	" 16, '92	Nil	Weather—hot with east wind in the latter part of the week. Harvesting of *rabi* over. Sugarcane being transplanted and irrigated. No material change in prices of food-grains. Supply of fodder and water sufficient except in some villages of Aurangabad subdivision.
	Jahánabad	...	Nil	
	Nawáda	...	Nil	
	Aurangabad	...	Nil	
34	Shahabad	" 16, '92	Nil	Weather—cool with high easterly winds. Millet coming into ear. Sugarcane thriving; Indian corn looks promising. Price of wheat and pulses has declined. Considerable damage done to mangoes by the prevailing high wind.
35	Darbhanga	" 16, '92	0·27	Weather—east wind prevailing. There was a shower of rain on Friday (15th) which cooled the air. The heavy shower which fell yesterday (15th), and which it is hoped gave more rain towards the north than in Darbhanga, will benefit the mango crop and also *mung*, *dhan* sowings and sugarcane. It will be of immense benefit to indigo, which was badly in want of it. Much more rain is wanted. Prices slowly rising, but price of rice at the Sadar is nearly the same as last reported, *i.e.*, 12 seers 1 chitak. Fodder and water for cattle scarce almost everywhere.
36	Muzaffarpur	" 16, '92	Nil	Weather—variable: alternately hot and cool with shifting winds. Rain holds off despite variable weather. Much needed for field preparations and for indigo crop now well above ground. Linseed outturn 4 annas. Condition of cattle good, but water in places becoming scarce. Prices fairly steady.
	Hajipur	...	Nil	
	Sitamarhi	...	Nil	
37	Saran	" 16, '92	Nil	Weather—hot and seasonable. East winds generally. *Rabi* harvest over. Crops generally stated to have weighed out better than was anticipated. *Cheena* doing well. Rain wanted for indigo. Prices of common rice:— Srs. Ch. Chapra ... ... 11 12 } per rupee. Siwán ... ... 12 8 } per rupee. Gopalganj ... ... 13 0 } per rupee.
38	Champaran	" 16, '92	Nil	Weather—hot. *Rabi* harvest nearly over. Paddy seedlings growing where sown. *Cheena* and paddy still being sown. Prices slightly rising on account of exportation. Fodder and water sufficient.
ORISSA.				
Orissa Divn.				
39	Cuttack	" 16, '92	Nil	Weather—dry and hot. Rain very badly wanted. Fodder-supply getting scarce in parts. Price of common rice stationary.
40	Puri	" 16, '92	Nil	Weather—seasonable. Rain wanted. *Dalua* rice harvested. Miscellaneous crops doing well. Rice sells at from 10 to 15 seers a rupee.
41	Balasore	" 16, '92	Nil	Weather—hot and dry. Rain is most urgently needed all over the district both for cultivation and for supply of drinking water. Rice sells at 14 seers per rupee.
CHOTÁ NAGPUR.				
Chota Nagpur Divn. *South-West Frontier Agency.*				
42	Hazáribágh	April 9, '92	Nil	Weather—very hot. Harvesting of *mahua* almost finished; yield good. Mango prospects fair in most places. Common rice selling at from 12 to 14 seers per rupee. Fodder and water still sufficient in most places.
	Giridi	...	Nil	
43	Lohardaga	" 16, '92	0·15	Weather—hot. No crop on the ground. Common rice selling at 13 seers per rupee. Fodder and water sufficient.
44	Palámau	" 15, '92	Nil	Weather—hot. Harvesting of *rabi* finished; outturn estimated at 4 annas. Sugarcane doing well but wants rain. Sone damage has been done to the *mahua* crop by the west wind; outturn estimated at 12 annas. Price of common rice stationary. Supply of fodder and water gradually diminishing.
45	Singhbhum	" 16, '92	0·27	Weather—cool since the past three days; cloudy and more rain in store evidently. The rain last night (15th) has enabled the cultivators to commence ploughing the land. It will also replenish the fodder and water-supply. *Mahua* and mango crops doing well. Price of rice stationary.
46	Manbhum	" 16, '92	0·13	A heavy storm yesterday (15th). General prospects remain unchanged. Prices steady.
	Gobindpur	...	Nil	

Published for general information.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ... The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 16th of April 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District observations. Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 1st April 1892. Mean for district.	Since 1st April 1892. Normal mean.	Since 1st April 1892. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—..... indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 19*th April* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 16TH OF APRIL 1892.

THE general distribution of pressure at the beginning of the week differed very slightly from the normal, the greatest defect being about one-thirtieth of an inch in North Bengal and South Bihár, while a very slight excess was marked at a few stations in Eastern Bengal and Orissa. Temperature was generally considerably above the normal, more especially in the north and west of the province and in Bihár. Humidity was high, due to the strong southerly winds which have steadily prevailed for several weeks in the north-west angle of the Bay, and which have formed so prominent a feature in the meteorology of the month.

For the first two days of the week no rain fell, except in a small area included in the Pabna and Bogra districts of North Bengal and in two of the out-stations of Mymensingh. On Monday, the 11th, a slight increase in pressure took place in North Bengal, which was followed on Tuesday by a moderate to rapid increase all over the province. Rain fell at all stations in North Bengal except the Rangpur, Jalpaiguri, and Kuch Bihár districts, in the Jessore district and at a few other stations. Temperature consequently fell in North Bengal but continued about 4° above the average in Bihár. During the next three days the barometer did not alter much at any one station, but a marked increase became apparent in the baric gradient from east to west, and winds assumed a more easterly set over the greater part of the province. This, and a rather rapid fall of the barometer on Saturday, conspired to give local storms amounting to general rain to the greater portion of South-West Bengal, the whole of North Bengal, the Purnea, North Bhágalpur and Darbhanga districts of North Bihár, the Monghyr and South Bhágalpur districts of South Bihár, the Sonthal Parganas and a considerable portion of Chota Nagpur. At the same time temperature fell generally, and at the end of the week it is below the normal at nearly all stations especially so in South and Central Bengal.

Pressure—Has not varied very largely from the normal during the week, the barometer having remained fairly steady. The relative distribution has increased the gradient slightly from east to west. The week closes with a defect of about one-tenth in Chota Nagpur, while in Assam the barometer is slightly above the normal.

Temperature—Continued very high on Sunday and Monday; on Tuesday it began to give way and was actually below the normal in a belt reaching through South Bengal and Assam, but above the normal elsewhere. This state of things continued with slight variation until Saturday, when the general rainfall had the effect of reducing the temperature below the normal at almost all stations.

The following table shows the excess or defect of the actual mean temperature from the normal for the week ending 16th April 1892:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 16th April 1892.

	Normal mean maximum temperature for the week ending 16th April.	Actual mean maximum temperature for the week ending 16th April 1892.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 16th April.	Actual mean minimum temperature for the week ending 16th April 1892.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 16th April.	Actual mean daily temperature for the week ending 16th April 1892.	Variation of actual mean from the normal.
Cuttack	102·8	99·9	−2·9	78·0	79·6	+1·6	90·4	89·8	−0·6

Hazáribágh	97·5	100·9	+3·4	72·0	73·0	+1·0	84·8	86·9	+2·1
Darjeeling	61·7	61·1	−0·6	47·4	50·4	+3·0	54·6	55·8	+1·2

Rainfall—Has been general, owing to local storms in all divisions except Orissa, the amounts being small in all cases. The average for North Bengal is 1·26", for South-West Bengal half an inch, North and South Bihár and East Bengal one-third of an inch. In all these cases the fall exceeds the normal for the week.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 16th of April 1892:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1892.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; t, thunder; <, lightning; p, passing temporary showers.

J. H. GILLILAND,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 18*th April* 1892.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending with Saturday, the 26th March 1892.

ZAMINDARI DÁK CESS IN BENGAL.

GENERAL DEPARTMENT—MISCELLANEOUS.

Calcutta, the 16*th April*, 1892.

RESOLUTION No 1135

READ—

The following papers regarding the Zamindari Dák Cess in Bengal:—

Letter from the Secretary, British Indian Association, dated the 17th April 1890.

Letter to the Secretary, British Indian Association, No. 1137, dated the 29th July 1890.

Letter from the Secretary, British Indian Association, No. 30, dated the 5th September 1890.

Circular letter to the Officiating Postmaster-General, Bengal, and Commissioners of Divisions, No. 2T.G., dated the 23rd September 1890.

Letter from the Officiating Postmaster-General, Bengal, No. 33547, dated the 13th January 1891.

Letter from the Officiating Postmaster-General, Bengal, No. 5736Z, dated the 14th May 1891, and enclosure.

Letter to the Officiating Postmaster-General, Bengal, No. 60T G., dated the 16th June 1891.

Letter to the Secretary to the Board of Revenue, Lower Provinces, No. 61T.G., dated the 16th June 1891.

Letter from the Postmaster-General, Bengal, No. $\frac{4\text{-}171}{\text{JD—No 1}}$, dated the 12th March 1892, and enclosure.

Letter from the Postmaster-General, Bengal, No. 681, dated the 5th April 1892.

The Government has had under consideration the question of substituting a fixed annual payment for the variable charge on account of the district post

now devolving on zamindars under Act VIII (B.C.) of 1862, for the purpose of maintaining communications between police officers, police-stations, and District and Sub-divisional Magistrates. The proposal emanated from the British Indian Association in April 1890, and the Postmaster-General, Bengal, was asked to report on it.

2. Mr. Colvin, with his letter of the 14th May 1891, submitted in reply a note reviewing the whole zamindari dák system, and suggested among other things the fixing of the cess for a period of ten years, and the amalgamation of it for collection purposes with the land revenue. The Lieutenant-Governor was favourably inclined towards the first proposal; but as it was probable that the effect of it would be that, if any additional zamindari dák lines were required to be opened in any district, there would be no money available for the purpose, except that set free by the Imperial post taking over any existing lines, His Honour deemed it necessary that the matter should be carefully considered before the Government accepted existing facts for a term of years. The Postmaster-General was accordingly asked to report whether any such extensions (of zamindari dák lines) were urgently wanted; whether there were any definite advantages, or the contrary, in fixing the cess for a term of years; whether its present variability caused serious inconvenience; whether it was true that zamindars fail to pay the cess and come under the punitive clause of section 9 of the Act through not knowing what they have to pay when the rate is raised; what steps should be taken to make the rate known to the zamindars; whether any establishment of peons was maintained for the purpose of notifying the rate; and if so, whether the cost of the same could be saved by the fixation of the rate for a term of years.

3. Zamindars are now, by rule 3 of the Revenue Money-Order Rules (section XIV, chapter IV of the Board's Miscellaneous Rules, 1888), able to pay their land revenue, road and public works cesses, and zamindari dâk cess, in one revenue money-order form, distinguishing what is meant for the cess and costs and interest in each case; and, *primâ facie*, there seems to the Lieutenant-Governor to be no reason why they should not be required to do so; but before issuing orders to this effect, he has deemed it necessary to ascertain from the Divisional Commissioners and District Officers, through the Board of Revenue, whether the proposal is feasible, and if not, what would prevent its being carried out. His Honour considers that it is wasteful to have one tauzi-navis keeping a list of all estates, showing the land revenue due from each, the kists when due, and the payments for the same; and another clerk keeping a list of all estates paying above Rs. 50, showing the zamindari dák cess due, its kists, and its payments. In addition to the economy that could thus be effected, there would be some saving in the cost of the peons who are separately maintained for issuing notices of default and collecting these payments.

4. The Lieutenant-Governor has since ascertained that in the 24-Parganas (*a*) the zamindari dák cess stands at 8 annas per cent. of the land revenue, and has been unchanged for three years; (*b*) that there are two kists, the 1st June and 1st December, but (*c*) that the bakijai is made out only once a year for the December kist—not for the June kist; (*d*) that a penalty is imposed theoretically only when a certificate issues—practically not at all; and (*e*) that the tauzi register is an unauthorized (though useful) form invented by a Deputy Collector. In the Howrah district the rate has been changed annually, having been 15 annas in 1889, Re. 1 in 1890, 12 annas in 1891, and Re. 1-1 in 1892. There is one kist due on 1st January, and if the cess is unpaid in that month, the penalty is added to the amount unpaid. Nothing more is done till the end of the calendar year, when an arrear list is sent to the Collector of Hooghly, and certificates are issued. In the Cuttack district the rate has varied annually, ranging between Re. 0-9-5·59 and Re. 1-0-9·38, the calculation being made to two decimals of pies. Last year the list of estates liable to the cess was revised and a considerable number struck off, having been reduced by batwara below Rs. 50 land revenue. These instances, His Honour considers, are sufficient to show how irregularly the working of the cess is carried on, and it seems to him that it would be well for Government to try to introduce uniformity in all these details.

5. The reply of the Postmaster-General, Bengal, to the Government letter of the 16th June 1891, in which he was asked to report on the question of keeping the rate of the zamindari dák cess unchanged from year to year, has been received and considered: the statement furnished by him shows that practically no changes in the zamindari dák lines or expenditure are anticipated in the next year, and His Honour is satisfied that the cess should be fixed for at least five years, beginning from January 1893. The Board of Revenue should determine at once, in consultation with all Collectors, what the rate should be. It should be in tolerably round figures, if possible, such as eight annas, twelve annas, one rupee, one rupee four annas, and so on: and in any case there should be no pies and no decimals. Estates which pay less than Rs. 50 as land revenue in consequence of batwara should not be exempted under section 8 of the Act from payment of the cess.

6. The kist should be a single one only, and its date should agree with the date of one of the land revenue kists, probably the largest one of the year. The Board, in reporting what the rate of the cess should be, should also recommend, in consultation with the Collectors, the kist with which the cess should be collected. The arrear list should be made up (in a prescribed form) as nearly as possible 30 days after the kist, and the penalty under section 9 of the Act should then be added.

7. Although Act VIII (B.C.) of 1862 places the zamindari dák cess under the Magistrate, the Lieutenant-Governor thinks it had better be dealt with, as far as the demand and collections are concerned, in the Collector's office. Under sections 3, 5, 7 and 8 of the Act, Government can appoint the Collector to be "such other officer" in the place of the Magistrate.

8. The question whether it is possible to keep the accounts of the cess in the same tauzi ledger as the land revenue and road cess is under consideration by Mr. W. C. Macpherson, who has been appointed to report on reforms of the tauzi procedure generally. If this is not found possible, a form of tauzi ledger for the dák cess must be devised and prescribed.

9. A statement of the demands and collections on account of the zamindari dák, and also a return showing the expenditure and balance, should be attached to the Board's Annual Report on the Land Revenue Administration in future, and the necessary paragraphs summing up the facts, should be included in the Report. The cess is not of sufficient importance to be treated in a separate report like the Road Cess. Appended is a statement extracted from the return submitted by the Postmaster-General, Bengal, showing the demands, collections, and arrears, and also the expenditure on account of the District Post. From this statement it appears that there are very large arrears outstanding in some districts, and steps should be taken to reduce the amounts. The Lieutenant-Governor desires that the figures may be verified by the Collectors and the Accountant-General, Bengal.

ORDER—Ordered that a copy of this Resolution be forwarded for information to—

(a) The Postmaster-General, Bengal.
(b) The Secretary to the Board of Revenue, Lower Provinces.
(c) The Commissioners of Divisions.
(d) The District Officers.
(e) The Accountant-General, Bengal.
(f) W. C. Macpherson, Esq., C.S., on special duty.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

Statement showing zamindari dák receipts and charges for the year 1890-91.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 23rd April 1892.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
BURDWAN DIVN.			
1	Burdwan April 23, '92 Kalna ... Katwa ... Raniganj ...	1·58 3·20 Nil Nil	Weather—hot with strong winds. Rain has done good in Sadar and Kalna subdivisions, and ploughing has begun. More rain badly needed. Prices of rice :— Srs. Sadar ... ... 12 to 14 } Kalna ... ... 10 to 13½ } per rupee. Katwa ... ... 12½ } Raniganj ... ... 13 }
2	Bankura „ 23, '92 Vishnupur ...	0·29 1·18	Weather—again becoming very hot. Rain fell on the 18th and 21st. The fall was very small at the Sadar station. More rain wanted for ploughing. Cultivation of sugarcane going on in all parts of the district. Health of cattle fair. Supply of fodder and water insufficient. Common rice selling at 15 seers per rupee at Bankura and 14 seers at Vishnupur market.
3	Birbhum „ 23, '92 Rampur Hát ...	Nil 0·93	Weather—cloudy at night and in the morning. High winds everywhere. Slight rain on the north and east. Fodder supplies low and water rather scarce. Cattle growing thin. Price of rice remains as before, 13 to 16 seers per rupee.
4	Midnapore „ 23, '92	0·80	Some rain this week has caused a great improvement in the appearance of the country. Since the rain, crops doing well. Grass springing up. Indigo doing well. Fodder sufficient. Prices of common rice :— Srs. Sadar ... ... 13 } Contai ... ... 14 } per rupee. Tamluk ... ... 11½ } Ghatál ... ... 14 }
5	Hooghly „ 23, '92 Serampore ... Jahánabad ...	0·13 1·21 0·96	Weather—slightly cooler, much wind, and two or three showers generally distributed. The slight rain that has fallen was insufficient for agricultural purposes. More rain is urgently needed. *Aus* cultivation delayed. Water-supply failing. Fodder-supply sufficient. Prices of common rice :— Srs. Ch. Sadar ... ... 10 0 } Jahánabad ... ... 13 5 } per rupee. Serampore ... ... 11 10 }
6	Howrah „ 23, '92 Ulubaria ...	0·03 0·57	Weather—cloudy and warm. Strong breeze from the south. Cool at night. Recent rain has done some good to standing crops. Ploughing going on. Condition of cattle good. Fodder and water-supply sufficient. Price of rice 11 to 13 seers per rupee.
PRESIDENCY DIVN.			
7	24-Parganas „ 26, '92	Nil	Weather—warm. Strong south wind blowing. Clouds about. Agricultural prospects unchanged. Rain urgently needed all over the district both for cultivation and for supply of drinking water. No cattle-disease prevalent. Supply of fodder sufficient. Common rice is being sold at from 10 to 12½ seers per rupee.
8	Nadia „ 23, '92 Kushtia ... Meherpur ... Ranaghat ...	2·20 1·53 Nil 2·20	Weather—hot with strong breeze from south. The rain that fell during the week in Sadar, Kushtia, and Ranaghat subdivisions has done much good. Ploughing and sowing operations going on briskly. Common rice sells at from 10 seers 10 chitaks to 13 seers 5 chitaks per rupee. Cattle-disease reported from Nadia outpost. Fodder sufficient.
9	Khulna „ 23, '92 Bágerhat ... Satkhira ...	0·28 Nil 2·32	Weather—hot; occasionally cloudy with high winds. The rain which has fallen in Satkhira has done much good, but more rain is wanted everywhere in the district. Ploughing for *aus* and *áman* in progress. *Boro* harvest going on; outturn estimated at eight annas. Common rice selling at from 12 to 15 seers per rupee. Fodder sufficient, but want of drinking water still felt in many parts of the district.
10	Jessore „ 23, '92 Jhenida ... Magura ... Narail ... Bangaon ...	1·89 2·80 0·35 3·36 1·40	Weather—hot and cloudy with high wind and occasional rain. Ploughing has commenced owing to recent rainfall. No want of fodder. Drinking water still insufficient. Price of rice stationary.
11	Murshidabad „ 23, '92	Nil	Weather—hot with strong east winds. Harvesting of *rabi* crops completed. No want of fodder. Condition of cattle generally good. Coarse rice sells at 12 seers per rupee.
CHITTAGONG DIVN.			
12	Chittagong „ 23, '92	4·86	Weather—seasonable. Prices steady. Condition of cattle generally good. Supply of fodder sufficient.
13	Noakhali „ 23, '92 Fenny ...	4·51 4·77	Weather—hot and close, with occasional rain. Recent rain has considerably improved agricultural prospects. *Aus* sowings vigorously going on. Fodder and water now sufficient. No cattle-disease excepting in Chhagalnaya. Prices steady.
14	Tippera „ 23, '92	6·20	Weather—hot, with heavy storms of wind and rain. Ploughing for paddy and jute progressing. Recent rain has improved prospects, but temporarily checked sowing of *aus, áman*, and jute. Cattle-disease prevalent in various parts of the district. Prices stationary.
15	Chittagong Hill Tracts. „ 22, '92	2·56	Weather—cloudy, with occasional showers of rain during the latter part of the week. Sowing in *jums* commenced. Rainfall during the week has done much good to tobacco and vegetable crops. Cattle-disease still prevailing. Common rice being sold at 10 seers per rupee.

No	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*			
Dacca Divn.			
16	Dacca April 23, '92	0·63	Weather—hot and cloudy. Harvesting of *boro* paddy and *cheena* continues Early rice and jute being sown. Recent rain has done much good to standing crops. Fodder available. Condition of cattle fairly good. Common rice selling at from 12 to 16 seers per rupee.
17	Faridpur „ 23, '92	0·88	Weather—cooler at the beginning of the week, but strong south-west winds are blowing now, and it is very hot. Rain has done a great deal of good, but more is wanted. Rice selling at 14 seers per rupee in Madaripur and 13 seers at Sadar. A few cases of cattle-disease reported from Goalundo, but not increasing. There is plenty of fodder yet.
18	Backergunge „ 23, '92	0·28	Weather—hot and cloudy with high winds. State and prospects of crops unsatisfactory. Rain much wanted. Ordinary rice sells at from 10 to 14 seers per rupee. Fodder sufficient. Good drinking water scarce.
19	Mymensingh „ 23, '92	2·64	Rain and storm with high wind. Prospects of *boro* rice and other standing crops fair. Common rice sells at 12¾ to 16 seers per rupee. Supply of water and fodder sufficient. Condition of cattle good.
Rajshahi Divn.			
20	Dinajpur „ 23, '92 Thakurgaon ...	0·73 0·59	Weather—hot; mornings still cool and cloudy. Prospects continue unchanged. Sowing of *bhadoi*, jute, and sugarcane going on. Price of rice at Sadar 11 seers per rupee and at Thakurgaon 12 seers. Condition of cattle good. Supply of fodder and drinking water fair.
21	Rajshahi „ 23, '92 Nator .. Nowgong ...	0·20 1·2 1·63	Weather—seasonable. Sowing of *aus*, *âman*, and jute progressing satisfactorily. *Boro* paddy also doing well. Rain has done much good to cultivation, but more wanted. Cattle are free from disease; fodder and drinking water sufficient. Price of rice 11¾ seers per rupee.
22	Rangpur „ 23, '92 Gaibanda ... Nilphamari ... Kurigaon ...	4·40 0·93 2·53 5·25	Weather—sultry. Prospects of *aus* and jute favourable. Fine weather needed for weeding. Price of common rice varies from 10 to 13 seers per rupee. Fodder and water sufficient.
23	Bogra „ 23, '92 Sherpur ... Naukhila ...	1·46 4·30 2·50	Weather—cloudy and cool in the early part of the week: latterly fine and very hot. State and prospects of all crops good. Fine weather now desirable; else the weeds which have already grown will do much harm. There is plenty of fodder and water. Common rice selling on the average at 13 seers per rupee.
24	Pabna „ 23, '92	0·70	Weather—cloudy with strong winds in the afternoon. Recent heavy showers have improved agricultural prospects and benefited standing crops. Common rice selling at 13 seers per rupee. Water and fodder sufficient everywhere except at Dulai.
25	Darjeeling „ 23, '92	3·04	Weather—fair. Jute and *bhadoi* are being sown. Wheat and barley being harvested. Potatoes and *fafar* coming up fairly. Rain has done much good to crops and fodder, and has increased water-supply. Cattle-disease in some parts of the hills.
26	Jalpaiguri „ 23, '92	1·09	Weather—hot. Sowing of *bhadoi* and jute progressing rapidly. Rain has improved prospects. Price of common rice varies from 9 to 11½ seers per rupee. Fodder and water-supply sufficient. No cattle-disease.
BIHAR.			
Bhágalpur Divn.			
27	Monghyr „ 23, '92 Begusarai ... Jamui ...	Nil 1·43 0·50	Weather—cool with east wind till Friday (22nd), since when hot with west wind. There was rain in Begusarai on the 16th, which set ploughing agoing. Crops on the ground doing well. Outturn of *mahua* only 6 annas and the mango crop only a 4-anna one. Coarse rice selling at 11 seers per rupee. Condition of cattle good; fodder sufficient. Water getting scarce.
28	Bhágalpur „ 23, '92 Banka ... Madhipura ... Supaul ...	Nil 0·30 1·30 0·74	Weather—early part of week cool, now hot again. The rainfall since 15th appears to have been fairly general over North Bhágalpur, but was lightest in the north-east. It has started ploughing on even the heavier soils; has enabled raiyats to sow a little early rice on high lands and to sow rice and a little *marua* in seed beds. The low land rice and *mung* previously sown have been much improved. In the south ploughing is in progress for *bhadoi* crops, but heavier rain is wanted for general cultivation. Sugarcane doing well. *Cheena* being harvested with 10 annas outturn. Cattle healthy. Fodder sufficient; water low.
29	Purnea „ 23, '92 Kishanganj ... Araria ...	0·61 0·25 1·46	There has again been good rain. The weather is now clear and hot. Sowing of *bhadoi* and jute and in some parts *aghani* continues. Sugarcane in Kishanganj doing well, and in Araria *cheena*, *kauni* and *mung* likely to be a full crop. No cattle-disease. Fodder and water sufficient. Prices of common rice :— Srs. Sadar ... ... 11 to 12 } per rupee. Kishanganj ... ... 11 } Araria ... ... Figures not furnished.
30	Malda „ 23, '92 Chanchal ... Shibganj ... Gajol ...	0·90 0·95 0·80 1·59	Weather—cool during the first three days of the week: latterly hot and oppressive. Condition of *boro* rice continues satisfactory. Sowing of *bhadoi* paddy in full progress. In Kaliachak mangoes have been a little damaged by hailstones. Price of ordinary rice varies from 11 to 13 seers per rupee. Supply of fodder and water sufficient.
31	Sonthal Parganas „ 23, '92	Nil	Slight rain everywhere, but not enough. Weather very hot in the day. In Dumka, Jamtara, Deoghur, and Godda subdivisions rain badly wanted; tanks drying; many wells dry and water-supply short. Fodder still available. Sugarcane doing well. Mangoes have suffered from late storm everywhere. Ploughing going on in Pakur, and *boro* paddy coming out in Rajmahal. Price of rice varies from 11 to 13 seers per rupee.

Division	No.	District and date of return		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—*concld.*					
PATNA DIVISION.	32	Patna	April 23, '92	Nil	Weather—hot. Threshing and winnowing of *rabi* in progress. *Cheena* and sugarcane being irrigated. Land being prepared for *bhadoi* crops. Common rice selling at 11 to 12 seers per rupee. No distress.
	33	Gaya Jahánabad Nawáda Aurangabad	„ 23, '92	Nil Nil Nil Nil	Weather—east wind during early part of week; high west wind latterly. Only sugarcane on the ground. It is being irrigated. Prices of food-grains rising somewhat. Supply of fodder and water getting scanty.
	34	Shahabad Buxar Bhabhua Sasarám	„ 23, '92	Nil Nil Nil Nil	Weather—seasonable. Wind has veered round to west and duststorms frequent. Sugarcane has been extensively planted out. Some damage is being done by white-ants. *Cheena* ripening. Duststorms have injured *mahua* and *mango* crops. Prices rising in west of district.
	35	Darbhanga Madhbani	„ 23, '92 ...	Nil 0·52	Weather—cool. Duststorms with some rain in places early in the week; later on getting hot again. Some rain has fallen as local showers, and the east of the district had a pretty heavy fall which rendered roads muddy. This has done good and stimulated cultivation of lands for *cheena* and *bhadoi* crops. Fodder still procurable but scanty; water scarce in places. Prices rising a little in spite of rain.
	36	Muzaffarpur Hajipur Sitamarhi	„ 23, '92	Nil Nil 1·16	Weather—hot with easterly winds and duststorms. A fall of 1¼ inches rain reported on 22nd at Sitamarhi. Elsewhere rain much wanted. Food-supply still sufficient, but prices continue tight.
	37	Saran Siwán Gopaljanj	„ 23, '92	Nil Nil 0·15	Weather—hot and seasonable with occasional west winds. Sugarcane pressing over. The shower in Gopalganj has done a deal of good to indigo and *cheena*. Rain wanted in other places. Fodder and water sufficient. Prices of common rice:— Chapra ... ... Srs. 11 Ch. 13 per rupee. Siwán ... ... Srs. 12 Ch. 8 per rupee. Gopalganj ... ... Srs. 13 Ch. 0 per rupee.
	38	Champaran	„ 23, '92	0·16	Weather—hot with east wind. *Rabi* harvest almost completed. Opium weighments in progress. Recent rain much beneficial to indigo. *Kado, arhar, dhan, marua, cheena, sawan, mung*, &c., are still being sown, and *dhan* is germinating in some places. Fodder and water sufficient. Prices slightly rising owing to exportation.
ORISSA.					
ORISSA DIVN.	39	Cuttack	„ 23, '92	0·02	Weather—hot and dry. Slight rain fell in parts, but quite insufficient. Fodder-supply scarce in places. Price of common rice stationary.
	40	Puri Banpur	„ 21, '92 ...	Nil 0·02	Weather—seasonable. Rain wanted. *Dalua* paddy being harvested. Miscellaneous crops doing well. Common rice selling at from 9 to 15 seers per rupee.
	41	Balasore	„ 23, '92	Nil	Weather—strong winds from the south. A few small local showers in parts of the district, but rain urgently needed for cultivation and for supply of drinking water. Rice sells at 14 seers per rupee at Sadar and 16 seers at Bhadrak.
CHOTA NAGPUR.					
South-West Frontier Agency.					
CHOTA NAGPUR DIVN.	42	Hazáribágh Giridi	April 23, '92 ...	Nil Nil	Weather—very hot. Mango damaged by excessive heat. Rain wanted for sugarcane, for ploughing operations and for replenishing the water-supply. Common rice selling at from 12 to 14 seers per rupee. Fodder and water generally sufficient.
	43	Lohardaga	„ 23, '92	Nil	Weather—hot. No crop on the ground. Common rice selling at 13 seers per rupee. Fodder sufficient, but its price is rising daily.
	44	Palámau	„ 22, '92	Nil	Weather—hot. Sugarcane doing well but wants rain. Gathering of *mahua* almost finished, and outturn will be about 12 annas, as some damage has been done to it by the west wind. Price of common rice stationary. Supply of water and fodder scanty.
	45	Singhbhum	„ 23, '92	0·07	Rain throughout the district in the early part of the week. Weather intensely hot. No change in prospects of mango and *mahua* crops. Land is being ploughed everywhere. Price of rice has risen in Chaibassa to 14 seers per rupee; elsewhere it is stationary. No cattle-disease. Fodder and water still sufficient.
	46	Manbhum Gobindpur	„ 23, '92 ...	0·17 0·26	Weather—very hot. More rain very urgently wanted. Rice sells at 14 seers per rupee on the average. Fodder and water-supplies have diminished very considerably.

Published for general information.

CALCUTTA; REVENUE DEPT.,
The 26th April, 1892.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 23rd of April 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District observations. Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 1st April 1892. Mean for district.	Since 1st April 1892. Normal mean.	Since 1st April 1892. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—.... indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 26th April* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 23RD OF APRIL 1892.

At the beginning of the week the pressure distribution over the province was distinctly abnormal; there was a defect of considerably more than a tenth of an inch in the western parts of South Bihár and Chota Nagpur, and a defect of from a twentieth to a tenth of an inch over the central and western parts of the province generally, while at the eastern stations and in Burma pressure was practically normal. Baric gradients were therefore unusually steep over the province, and hence favoured the strong south-easterly and easterly winds which prevailed at all stations. These winds brought up much moisture, and hence humidity was very high, though temperature was generally a little below the normal. A few local storms were reported in South-West Bengal on the evening of the 17th instant, but in East and North Bengal they were rather numerous. These conditions continued practically unaltered on the 18th, and again on the evening of this day local storms with rain were numerous, almost every station in East and North Bengal receiving rain, while a few storms were reported in North Bihár and in parts of South-West Bengal. On the 19th the area of defective pressure extended, and in parts of Bihár and South-West Bengal pressure became from an eighth to a tenth of an inch below the normal. On the 20th the fall of pressure continued across the centre of the province, and on the 21st it became largest at the eastern and northern stations, while the fall was comparatively small in Bihár and South-West Bengal, and there was a general defect in the pressure over the province ranging from about a tenth of an inch in the south-eastern districts to nearly a sixth of an inch at some of the central and western stations, and thus practically a barometric depression existed over the province on this day. On the 22nd the depression became rather more marked, and pressure was about a quarter of an inch below the normal in Bihár and North Bengal, and the centre of greatest defect had been removed to North Bengal. Winds therefore became more westerly than they had been, and over the western half of the province winds were westerly, south-westerly and southerly, thus partially driving back the moist easterly and south-easterly current which had been previously prevailing. Owing, however, to the great differences of pressure, the wind force for the whole of this time continued very high. Up to this date, therefore, many local storms with rain continued to occur in the east and north of the province, but on the 22nd they became less numerous. On the 23rd a rather rapid increase of pressure took place, and the defect in Bengal was partially filled up, but still conditions were abnormal, and on this day strong southerly winds were blowing at almost all stations, and except at a few stations in North Bengal, rainfall was practically absent from the whole province. The principal features in the meteorology of the week have, therefore, been the abnormally low pressure, particularly in the west and north of the province, the exceedingly strong winds which have accompanied this distribution of pressure, and the numerous local storms with rain which have occurred in the east and north of the province, and on the last two days of the week the high temperatures which have been registered.

Pressure—As stated previously, has been in defect of the normal throughout the week; the mean defect has ranged from about 0 08" at Gopalpore and False Point to about 0·13" to 0·15" at the western stations in South Bihár, while the general defect over the province has equalled about a tenth of an inch.

Temperature—Has been above the normal at the western stations almost throughout the week, but elsewhere it was generally in defect till the close of the week, when it became above the normal in all districts. The mean temperature for the week for the whole province is almost absolutely normal, but the western divisions, such as Chota Nagpur and Orissa, show excess temperatures of 2° and 3°; while North Bengal, on the other hand, shows a defect of nearly 4°.

The distribution of temperature over the province and its variation from the normal are clearly seen in the following table, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are compared with the normal values for the same period. It will be seen the day temperatures have been generally in defect, while the night or minimum temperatures have been rather largely in excess of the normal:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 23rd April 1892.

	Normal mean maximum temperature for the week ending 23rd April.	Actual mean maximum temperature for the week ending 23rd April 1892.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 23rd April.	Actual mean minimum temperature for the week ending 23rd April 1892.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 23rd April.	Actual mean daily temperature for the week ending 23rd April 1892.	Variation of actual mean from the normal.

Darjeeling	63·0	67·0	−6·0	48·5	50·2	+1·7	55·8	53·6	−2·2

Rainfall.—The heaviest falls during the week have occurred in East Bengal, which has received 2 70 inches, or about two inches more than usual for the period. North Bengal has received an average fall of 1 53 inches, or nearly half an inch in excess. The only other district receiving rather heavy rain has been South-West Bengal with an average amount of 0·70 inch, or practically a normal fall for the period. North Bihár has received 0·20 inch, and South Bihár, Chota Nagpur, and Orissa falls averaging only a few thousandths of an inch, and in these cases the falls are less than the normal amounts.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 23rd of April 1892:—

Meteorological Divisions.	Temperature.						Rainfall.									
			Averages for week.				Of week.			Rainy days.			Since 1st of month.		Since 1st April 1892.

The average fall of the corresponding period for 24 years, S.-G.'s Office ...	0·55
The total fall from 1st January to 23rd April 1892	0·75
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	4·03

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; t, thunder; <, lightning.

J. H. GILLILAND,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 25th April 1892.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending with Saturday, the 2nd April 1892.

CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 and 25 Vic., Cap. 67.

THE Council met at the Council Chamber on Saturday, the 23rd April, 1892.

Present:

The HON'BLE SIR CHARLES ALFRED ELLIOTT, K.C.S.I., Lieutenant-Gover nor of Bengal, *presiding*.
The HON'BLE J. T. WOODROFFE, *Offg. Advocate-General.*
The HON'BLE SIR HENRY HARRISON, KT.
The HON'BLE T. T. ALLEN.
The HON'BLE H. J. S. COTTON.
The HON'BLE H. H. RISLEY, C.I.E.
The HON'BLE DR. MAHENDRA LAL SIRCAR, C.I.E.
The HON'BLE SHAHZADA MAHOMMED FURROKH SHAH.
The HON'BLE A. H. WALLIS.
The HON'BLE MAHARAJAH SIR HARENDRA KISHORE SING BAHADUR, K.C.I.E.
The HON'BLE GONESH CHUNDER CHUNDER.

NEW MEMBERS.

THE HON'BLE MESSRS. WOODROFFE and RISLEY and BABU GONESH CHUNDER CHUNDER took their seats in Council.

STATEMENT OF THE COURSE OF BUSINESS.

THE HON'BLE THE PRESIDENT said:—"Before we begin the proceedings of the day, I ask your permission to make a brief statement of the course of legislation which I propose to lay before the Council, and which I trust will be carried through in the Session which we have to-day begun. You are aware, no doubt, that we had two Bengal Bills which would, in the ordinary course, have been laid before this Council. One was a Bill to amend the Court of Wards' Act, and the other was a Bill to create and define the terms of service for a new body—the Bengal Military Police—in which the existing Military Reserves and the force known as the Chittagong Hills Frontier Police, now serving in the South Lushai district, are merged. Both of these Bills were, however, taken over by the Government of India, and have been passed into law by the Supreme Legislative Council, and consequently there was no legislative work ready to be laid before this Council during the cold weather.

"We, however, are not confined, like the Supreme Council, to the short period of the cold weather for carrying on our legislation, but we are able to conduct it all through the year. I trust in the present Session we shall be able to pass three Bills. Two of these are to be introduced and laid before the Council and, I believe, forwarded one stage to-day. These are the Bill to amend the Village Chaukidari Act of 1870 and the Bill to make better arrangements for the distribution of the charges for keeping up a Fire-brigade in Calcutta. The objects and reasons and the nature and provisions of these Bills will be laid before the Council by the hon'ble members in charge, and it is unnecessary for me to make any remarks upon them.

"There is a third Bill which I should have been glad, if it had been possible, to present to you to-day. I mean the Bill to amend the Bengal Municipal Act. We are not, however, sufficiently forward with our preparations to enable me to ask the Council to permit its introduction to-day. The Bill has been drafted in a tentative form, and has been circulated to all District Officers in Bengal with instructions to procure the opinions of the different Municipal Corporations in their districts upon the provisions of the Bill; and though that was done some months ago, and I hoped that by this time we should have had all the replies ready and tabulated and a précis made of them, so that, after making any necessary alterations in the first tentative draft, the Bill might have been brought forward and published to-day, the replies have not been received from a good many districts, and the case did not appear to be sufficiently forward to justify me in troubling the Council with it upon this occasion. I trust, however, that we shall meet again in July, and I may then be able to lay this Bill before you, and that we shall possibly either complete it during the Session of July and August, or possibly it may be necessary, in order to fully consult public opinion and to give the amplest consideration to all the changes which may be proposed and to all objections which may be taken, to postpone it till the cold weather. However, with regard to the other two Bills, which, I believe, contain much less contentious matter, I trust we shall be able in the Session of July and August to give them final consideration and to pass them into law.

"The programme of our legislation is therefore this, that these two Bills shall be introduced to-day and referred to Select Committees, and that the further consideration of them shall be taken up in July, so that they may in all probability be passed into law in July and August; and that the Municipal Act Amendment Bill shall be introduced in July, and such progress as may be found possible made with it so as to complete it in that Session, or else, if necessary, to postpone it for a month or two later, but at any rate to carry it through before the end of the calendar year."

VILLAGE CHAUKIDARI ACT, 1870, AMENDMENT BILL.

THE HON'BLE MR. COTTON moved for leave to introduce a Bill to further amend the Village Chaukidari Act, 1870.

He said:—"Mr. President, as I shall ask you to be good enough to suspend the Rules for the Conduct of Business to enable me to introduce this Bill in Council, I do not propose to address the Council on the subject of the Bill at the present stage. I now merely ask permission to introduce the Bill."

The Motion was put and agreed to.

The HON'BLE MR. COTTON said:—"I now apply to your Honour to suspend the Rules of Business to enable me at this meeting to introduce the Bill to further amend the Village Chaukidari Act, 1870, and to move that it be read in Council. The object of my asking for this suspension of the Rules of Business is merely to be able to advance the Bill a definite stage to-day, in order that it may be published, and that public opinion may be obtained upon it before measures are taken for passing it into law."

The HON'BLE THE PRESIDENT having declared the Rules of Business to be suspended—

The HON'BLE MR. COTTON said:—"The Bill which I have now in my hands is a comparatively small measure. It effects further amendments in the Village Chaukidari Act of 1870, which hon'ble members will doubtless recollect has been on two or three occasions before this Council for amendment. An amendment of that Act was passed in 1871, and again after considerable discussion, in 1886.

"Although this Bill is in its way a very small measure, I shall, I fear, be obliged to occupy the time of the Council for a few minutes in explaining its principle, which is opposed in some important particulars to the principle of the existing law. The village watch of Bengal, as of all India, is one of the oldest institutions of the country connected with the village system itself, and the village watchman of ancient Hindu times is substantially the counterpart of the village watchman as he is recognised by existing legislation; that is to say, the village watchman is ordinarily a member of an hereditary thieving caste, and responsible for his behaviour to no one except to the village community by whom he is maintained. That was the constitution of the village watch in ancient Hindu times, and it is practically the constitution of the village watch at the present day. Under the Mogul administration there was some change effected. The character of the Mogul Government was eminently fiscal, and the village watchman, instead of being the village servant, became to a very large extent the servant of the zamindar, and that dual position remained for a very long time under British rule, and still remains in all parts of the country where Act VI of 1870 has not been enforced. The object of Act VI of 1870 was to place the village watch everywhere under the control of the village organization. The principle of the Bill, as stated by the hon'ble member who introduced it, was this:—'The village watchman is purely a village servant employed for the protection of the lives and the property of the villagers, and looking to the village community for the regular payment of the remuneration to which he is entitled.' It was laid down at that time in this way. It was said municipalise more, trust the people, trust the villagers with the control of their own village watch, and great improvement in Police administration will ensue. That doctrine was of course hotly discussed and disputed in this Council; but ultimately it prevailed, and the effect of the present chaukidari law is to place the village watch entirely under the control and under the influence of the village community. The Bill, I have now the honour to place before you, introduces a modification of this principle. It is my own view strongly, and it is the view of the present Government, that the Police is a branch of the administration which ought to be brought into closer relations with the Government; and I for one—and I trust the Council will join me in this—look forward to the time when the village watch will be so largely modified as to become the real efficient Police of the country, and when the existing constabulary will have virtually no other functions to discharge than those of escort and guard, and to some extent that of process-serving. The present Bill is a slight step in this direction—not a very decisive step perhaps—for it does not pretend to be more than a very gradual and small measure, but it is a step in the direction of centralizing Police administration, and of bringing the village watch much more than it now is under the immediate supervision of the District Magistrate who represents the Government in the mufassal. I apprehend, gentlemen, that this change of principle which we are introducing will, so soon as it is realised, be unfavourably received by a considerable section of public opinion in Bengal. The meaning of the Bill does not, however, seem to have been understood as yet by the general public, for I have before

me the report of the Indian Association, who so far misconceive the object of the Bill as to say that they welcome it as a further expansion of the principle of Local Self-Government in these Provinces. The prayer of the Association is, that further powers may be given to the punchayet of the village. Now I must say, once for all, that this Government does not look on the administration of the Police as in any way connected with the development or extension of the principle of Local Self-Government; on the contrary, we believe that if there is any duty of the Government which it is inexpedient to municipalise, it is the control of the Police. The inhabitants of a village have no claim to a municipal administration in any respect, still less have they any claim to control the Police. For the discharge of such duties the highest possible qualifications must be secured, and when the low calibre of the men who constitute a village punchayet is considered, the advantage appears to be wholly on the side of a Police administration by the Central Government. I am not only expressing my own decided opinion in this matter, but I may remind the Council that the subject is amply discussed by no less an eminent authority than the late Mr. John Stuart Mill, whose book on representative Government might well be more widely read in this country amongst the friends and advocates of Local Self-Government. He lays down in that volume with great force and clearness that the Police is a department of the Government which cannot be entrusted to the representatives of a rural tract; and so in England, we have withdrawn the control of the village police from the villagers, and the old village watch has disappeared. In Bengal we do not go so far as to desire that the village watch of this country shall altogether disappear, and we wish to adhere to the only sound element of the chaukidari system, viz., that of retaining the local knowledge of men resident in the village in which they are to be employed; but we do desire to modify it materially, and the direction this modification takes is, by placing the village watch more under executive authority than it now is.

"At present the punchayet, which is in other words the representative of the village community, not only appoints the chaukidars, but has authority under the law to decide within specified limits how many chaukidars shall be employed and to fix their salaries. On these three main points the power and authority of the punchayet is curtailed by the present Bill. It is proposed to allow the punchayet to nominate, but the appointment of the village watch will rest in future with the District Magistrate. It is laid down also that the Magistrate and not the punchayet shall determine the number of chaukidars within specified limits. This is a proviso which experience has shown to be very necessary. The law authorises the punchayet now to fix the number of chaukidars, and in practice it has been found that they reduce the number, and the Magistrate has been obliged to interfere to maintain the minimum number of chaukidars prescribed by law. They have done so without any specific legal authority, but it is only in this way that the full number of chaukidars has been maintained. Under the present Bill, the Magistrate is vested with the power he has hitherto informally exercised. Similarly, it is proposed—and this is a point of at least equal importance—that the Magistrate shall fix the salary of the chaukidar. The salary is now fixed by the punchayet, and the tendency is to fix it at a rate so low as to be below the standard of efficiency. *Per contra* there is a provision in the present Bill which may be said to be of a more radical character than anything the present law contemplates. Under the present Act, the punchayet is appointed by the District Magistrate. The Bill, I have in my hand, proposes that under certain conditions the punchayet may be elected by the villagers, introducing thereby the elective principle into villages. Now, Mr. President, this is not a section of the Bill with which I personally have much sympathy. My own view is not in favour of introducing democratic institutions into India, and I do not think that the introduction of the elective principle into villages will be calculated to benefit the villagers in any way. However, it has been thought advisable to leave this section in the Bill for the present, and it is hoped that there may be a discussion in Council, and that public opinion may be elicited, so that the Government may know what the views of others are on the subject. The idea is one which was put forward by the late Police Commission, and the Government are not pledged to it in any way; but if it is found that public opinion, as expressed through this Council, is in favour of the provision, then the Government will have no objection to allow it to remain.

"For the rest, the changes proposed in the law are more or less of detail. Powers of arrest are given to chaukidars, thus assimilating their powers to those now exercised by the regular Police. An important section is introduced authorising the Magistrate, if the collections by the punchayet are very bad, or if he finds that the chaukidar is imperfectly paid, to appoint a Government Collector of the chaukidari tax by whom the chaukidari rate will be levied and paid to the chaukidar. This is a provision which exists in the present law only, so far that it is within the competency of the punchayet to apply to the Magistrate to appoint a tahsildar. But the Bill authorises the Magistrate under specified conditions to appoint a tahsildar of his own accord.

"And then, lastly, there is a section introduced under which fines imposed on chaukidars are credited to a District Chaukidari Reward Fund, the control of which rests with the Magistrate. At present fines, when realised, are credited to the Village Chaukidari Fund; that is to say, they pass to the punchayet. The Magistrate has no control over them, and the effect is that if the punchayet and the chaukidar work together and are friendly one with the other, no fine whatever can be inflicted on the chaukidar. It is thought desirable that the Magistrate of the district should have the power of inflicting some punishment on chaukidars other than dismissal. The fine will then be credited to a Reward Fund for distribution among deserving chaukidars, a provision which has always been much needed, and is calculated to improve the administration of the Village Police Force.

"The present legislation will not in any way touch Part II of the existing Act, which relates to chakran or service land. That is a very complicated and elaborate matter, which is reserved for further consideration and legislation. The present Bill is introduced simply with the objects, I have described, of strengthening the control of the executive authorities over the village police.

"I have now the honour to introduce the Bill and to move that it be read in Council."

The Motion was put and agreed to.

The Bill was read accordingly.

The HON'BLE MR. COTTON said:—"I now move that the Bill be referred to a Select Committee. I may say that it is the intention of the Government to circulate the Bill widely, and to invite non-official as well as official opinion upon it. I propose to add the name of the Hon'ble Mr. Risley to those on the paper. He was a member of the Police Commission, and is in a position to afford valuable assistance in considering the measure. The Committee to whom I propose to refer the Bill will, therefore, consist of the Hon'ble Sir Henry Harrison, the Hon'ble Mr. Allen, the Hon'ble Mr. Risley, the Hon'ble Babu Gonesh Chunder Chunder and the Mover."

The Motion was put and agreed to.

LICENSED WAREHOUSE AND FIRE-BRIGADE BILL.

The HON'BLE SIR HENRY HARRISON moved for leave to introduce a Bill for the regulation of Warehouses and the maintenance of a Fire-brigade.

He said:—"As I am going to ask your Honour afterwards to suspend the Rules of Business, I need not make any remarks on the Bill at this stage."

The Motion was put and agreed to.

The HON'BLE SIR HENRY HARRISON applied to the President to suspend the Rules of Business to enable him to introduce the Bill, and to move that it be read in Council and referred to a Select Committee.

The HON'BLE THE PRESIDENT having declared the Rules suspended—

The HON'BLE SIR HENRY HARRISON said:—"I now beg to introduce the Bill, and to move that it be read in Council. The main object of this Bill is, in on

word, to relieve the jute industry from bearing the entire cost of the Fire-brigade in Calcutta as it now does. The jute industry has reached this position rather by a process of drift than by any intention on the part of the Legislature, to saddle it with the whole of this charge. As a matter of fact, the Fire-brigade in Calcutta and the establishment of jute warehouses in Calcutta, were almost synchronous. Prior to 1872, there was no Fire-brigade worthy of the name; the Municipality maintained a few hand engines, and whatever they maintained, they paid for. In 1866, when the Municipal Act was amended, the danger arising from jute warehouses, especially from unpressed jute, was so great that certain sections were introduced to provide for the right of inspecting them. Soon after, in 1871, severe fires broke out in Calcutta, which were distinctly traceable and due to jute warehouses, and upon that the Chamber of Commerce, the Trades Association, the British Indian Association, and several other bodies petitioned the Government to take the matter into their serious consideration and protect the public, and the outcome of that was the first Act of 1872, which imposed fees on jute warehouses varying from Rs. 2-0 to Rs. 1,000, and at the same time provided for the maintenance of an efficient Fire-brigade, and steam fire-engines were ordered out in that year for the first time. Apparently it was not the intention of the Act that the fees should cover the entire cost of the Fire-brigade, because a tax was imposed on insurance offices at the rate of eight annas on every Rs. 10,000 insured, and it was also provided that the Municipalities of the town and the suburbs should make good any deficiency in the income. But, as a matter of fact, partly, I suppose, owing to the great multiplicity of jute warehouses, and partly owing to the fees having been fixed so high, the income very far exceeded the expenditure, as would be seen by the fact that between 1872 and 1881, the Government made grants from the Fire-brigade Fund of Rs. 40,000 to widen the street opposite the Municipal Office; of Rs. 16,552 as a contribution towards the Lock Hospital; of Rs. 10,000 for improvements in the suburbs, and, lastly, of Rs. 60,000 to help towards the widening of a portion of the Chitpur Road. Thus it came about that, although a small portion may have been due to the tax upon insurances which was not abandoned till 1879, practically the jute industry paid for the whole of the Fire-brigade, and so much more that large funds accrued at the disposal of the Government which were appropriated for beneficial purposes for the town and suburbs. Accordingly in 1879 another Act was passed—one amending Act had already been passed in 1875 which does not bear much upon the present question—in order to reduce the fees. The tax on insurances being no longer required was abandoned, and it was arranged that the Government should fix the rates in accordance with the recommendation of the Commissioners, and as a matter of fact, the rate was fixed at a sum not exceeding ten per cent. upon the annual valuation of jute warehouses; and a rule was also passed that the town should bear 7-10ths and the suburbs (not Howrah) 3-10ths of the entire cost of the Brigade. However, as the number of jute warehouses went on increasing, and as land was cheaper and sites more available in the suburbs, it very soon appeared that the town warehouses had to be taxed very much more than those in the suburbs to keep up these proportions. The suburbs met its 3-10ths share with the greatest possible ease, whereas the town had to keep up the rate at its maximum to meet its share. Accordingly in 1883 the Act No. IV, which it is now proposed to repeal by this Bill, was passed—first, to abandon the proportion of 7-10ths and 3-10ths, and to place jute warehouses in the town and the suburbs on the same footing, and instead of having separate Fire-brigades for Howrah and the town and suburbs, as had been done before, to have one Fire-brigade for the whole urban area, for the town and all its environs on both sides of the river, and to introduce the same rule in Howrah as regards fees upon jute warehouses. It was arranged that the inspection of jute warehouses should be vested in the Municipality, as also the collection of the fees, and for this purpose they were allowed to take 20 per cent. of the entire proceeds, and the remaining 80 per cent. were paid to the Commissioner of Police for the maintenance of the Fire-brigade; and as a matter of fact these fees, with the receipts from the petroleum fees and from other sources, had as nearly as possible just maintained the Fire-brigade. So that since 1883 it had come to this, that the jute industry no longer paid more than was necessary, but it still paid practically the whole cost of the Fire-brigade of the town and its environs. The Fire-brigade,

which is useful, if not often for pucka houses, very much for bustees and huts, has been entirely supported from this one industry alone; for although 'cotton' is included, almost the whole of the receipts come from jute. The Chamber of Commerce represented that this was not fair; that though there was a provision that any deficit should be made good by the Municipality, yet, as a matter of fact, the rate of fees which was levied was sufficient to meet the entire cost of the Fire-brigade, and upon this representation of the Chamber, the Government were evidently satisfied as to the general justice of the protest, and they accordingly appointed a Committee upon which the Chamber, the Police, the Corporation of Calcutta, the Port Commissioners and some others were represented.

"I was one of the members of that Committee, and therefore I am able to speak from personal knowledge of its proceedings. It was found that all were unanimous that it was not just to expect that the whole cost of the Fire-brigade should be paid by one industry. But then two separate principles claimed recognition. One principle was, that though the jute industry ought not to bear the whole cost, it was sound principle that warehouses for hazardous goods, which, combined with huts and bustees, were the chief sources of fires, should pay more than the ordinary sum payable for substantial pucka houses where the risk of fires was very small. The other principle put before us was, as a matter of fact, that all such distinctions, however justifiable in principle, were difficult to carry out in equity and practice, and therefore should be abandoned. Both in Bombay and in England it has been recognised as the simplest and best course to have a uniform taxation on all classes of property. In Bombay, there is a tax of ¾ per cent. on the valuation for the Fire-brigade. In England, Fire-brigades were generally supported in the same way. But the Committee thought that, in the first place, such a principle was not nearly so applicable to India as to England, because in Calcutta there was scarcely any risk of fire at all from pucka houses in which fires were so seldom lighted in the main building; whereas, on the other hand, we have much more risk from warehouses in Calcutta. In the second place, the Committee thought that, although they might not have been willing to introduce it for the first time, a distinction between hazardous and non-hazardous goods which had been recognised for 20 years ought not to be needlessly abandoned. They thought that there was no reason to pass suddenly from one extreme to another, and consequently they adopted the middle course of continuing to place considerable extra taxation on hazardous goods, and at the same time to make the whole community contribute towards the cost of the Fire-brigade.

"On looking about also they saw there was another source of revenue which clearly ought to be utilised. In the town of Calcutta dangerous and offensive trades pay, as is reasonable, extra taxation in consequence of their character, such as depôts of wood, hay, straw, coal and rags which, barring the latter, cannot be said to be offensive but dangerous, and it seemed to them reasonable that their inflammability should be recognised as a source of income towards meeting the cost of the Fire-brigade. Consequently, the Committee thought that the proceeds of these licenses, which in the Municipality were taken over and above the ordinary trade license, ought to be added to the Fire-brigade Fund, and ought to form one source of its revenue.

"Then came the question of apportionment—a very difficult matter to deal with; because it is obvious that so many indirect considerations enter into what is a fair apportionment, that it is hardly possible to do more than adopt a general approximate apportionment. As regards this, the Committee were at first inclined to think that jute and cotton ought to pay 50 per cent., and depôts of wood, hay, straw, &c., 20 per cent. On further consideration and further correspondence with the Chamber, the proposals made were of this kind. In the first place, that the law was defective at stopping at unpressed and unscrewed jute. In the law, as it now stands, which the Bill which is now introduced will repeal, jute and cotton meant respectively jute and cotton not pressed or screwed for shipment. Now it so happened that one of the largest and worst fires recently occurred in a warehouse which had no unscrewed or unpressed jute; and it was asked why should these, which were obviously hazardous goods, though not in the same degree, be exempted altogether. In the same way it was pointed out that all gunnies were extremely dangerous,

and so were rope manufactories; and, therefore, the Chamber contended that the area of hazardous goods ought to be increased. Eventually it was agreed that 20 per cent. was too much to take from depôts of wood, hay, straw, coal and rags, and it was reduced to 10 per cent., and, on the other hand, the percentage to be paid by hazardous goods of the nature of warehouses was extended to 60 per cent. That left 30 per cent. to be met, and the question was considered whether the tax should not be re-imposed upon insurance offices. But looking at the fact that the tax would be paid by the insurers who may be taxed over again, and on various other grounds, the Committee did not recommend that this should be adopted. The Bill, therefore, proceeds on these lines; 60 per cent. of the cost to be imposed on hazardous warehouses, but what is to be exactly included in this has been left somewhat undetermined in the Bill, because the representatives of the Chamber proposed to include a very large number of goods. The Council are probably aware that there is a separate Act for the regulation of petroleum, and that fees are already paid by it for the support of the Fire-brigade. Of course it is not pretended that godowns used for retail trade should be touched. There is a section of the Bill which relates to hazardous goods, but whether all these ought to be included in it or not is a matter upon which the Committee did not make any definite recommendation, because further discussion of them appeared to be infructuous except by the authority which would have the power to decide the point. They thought it best, therefore, to leave it to the Council to determine precisely what should be included. The Bill goes so far as to include, as liable to pay under the hazardous schedule, all kinds of jute, pressed and unpressed, and warehoused for storage, and all store-houses for oil other than petroleum or ropes or rope material or any other substance or thing for the time being subject to the operation of this Act. The system on which it is proposed to work the Act is this: the Commissioner of Police will prepare a budget to show the whole expenditure on the Fire-brigade, on the receipt side of which he shall show all the various receipts for licenses for fireworks, petroleum and other sources. This, of course, will show a deficit which will be met to the extent of 60 per cent. by a tax on warehouses under the Act, and of 40 per cent. on the Municipalities. The reason why 40 per cent. is to be taken from the Municipalities is this, that, under the present law, the Municipalities have the entire control of the license fees from dangerous goods, such as wood, hay, straw, coal and rags, and it was not thought desirable to fetter their discretion more than at present; it was therefore left to them to decide what fee to impose. At present they do get nearly ten per cent. of the cost of the Fire-brigade, but it is open to them, as far as the law allows, to increase or decrease these fees, and then make good the remainder. If they keep the fees as they are now actually collected, the amount which they will have to contribute from other funds will be about 30 per cent. These fees are left in their possession and control, and all the Government will expect from them will be a contribution of 40 per cent. The other 60 per cent. will be raised in a somewhat tentative manner by licenses on hazardous warehouses. Estimates will have to be framed of the assessed value of the properties, and a percentage fixed. If in the first year it proves too much, in the next year the Government will reduce it. Anyhow, it will be the duty of the Government to work this percentage so that it practically provides for the share which falls on these industries. One more change the law introduces, mainly in the interests of economy. It is to transfer the inspection of these warehouses from the Municipality to the Police. The Police have now the inspection of all petroleum godowns; they have facilities in their present establishment far greater than the Municipalities have, who have to maintain a special establishment for the purpose.

"The Police have an organization which already enables them to carry out inspections, and no doubt they will carry it out at a much cheaper cost than the 15 per cent. which is estimated to be the cost to the Municipality. The Municipality will continue to grant licenses at the rate at which the Government may lay down, and they will collect the fees, and after appropriating 5 per cent., will make over the rest to the Government. As regards the charge of the Fire-brigade, the question was raised whether any alteration should be made in its management; but the Committee, and the Government in accordance with their views, considered that the management of the Fire-brigade has been highly

satisfactory. I speak with some personal knowledge, and I think it is very well managed. Though it was originally under the Corporation, it was found convenient as early as 1872 to make over the management to the Commissioner of Police. The Act of 1879 sanctioned this change, and that arrangement has remained in force ever since. But as regards economy and efficiency, it is much better managed than in Bombay, where a ¾th per cent. rate is levied. There the Fire-brigade is in the hands of the Corporation, and the expenses are out of all proportion to the collection of the rates. The Police furnishes a very efficient body of firemen, who are only paid on the occurrence of fires, which is a far more economical arrangement; and it is a great advantage that the same men who have the management of the brigade should, in case of necessity, have Police powers also. Therefore the Act leaves the management and control of the Fire-brigade untouched. These are the general outlines of the Bill under consideration. I now beg leave to introduce it, and to move that it be read in Council."

The Motion was put and agreed to.

The Bill was read accordingly.

The HON'BLE SIR HENRY HARRISON also moved that the Bill be referred to a Select Committee consisting of the Hon'ble the Officiating Advocate-General, the Hon'ble Mr. Wallis, the Hon'ble Shahzada Mahommed Furrokh Shah and the Mover.

The Motion was put and agreed to.

The Council adjourned *sine die.*

CALCUTTA;
The 28th April, 1892.

E. W. ORMOND,
Offg. Assistant Secretary to the Government of Bengal,
Legislative Department.

RESOLUTION REVIEWING THE CHANGES MADE IN THE FACTORY LAW.

GENERAL DEPARTMENT—MISCELLANEOUS.

Calcutta, the 30th April, 1892.

RESOLUTION No. 1312.

READ again—

"The Indian Factories Act XV of 1881."

Read also—

Act XI of 1891, amending Act XV of 1881, and the following papers:—

(1) Letter No. 860, dated the 18th June 1891, from the Government of India regarding the arrangements necessary for the efficient working of the Factory law in Bengal.

(2) Letter No. 287T.—G., dated the 1st October 1891, from this Government to the Government of India, Home Department, regarding the appointment of a special Inspector of Factories for the Lower Provinces and the North-Western Provinces and Oudh.

(3) Letter, dated the 28th October 1891, from A. Smith, Esq., President of the Committee appointed to revise the Bengal Rules under the Indian Factories Act.

(4) Letter No. 1635, dated the 10th December 1891, from this Government to the Government of India, Home Department, submitting the revised draft rules framed by the Committee under section 18 of Act XV of 1891, as amended by Act XI of 1891.

(5) Letter No. 1731, dated the 30th December 1891, from the Government of India, Home Department, suggesting amendments in the draft rules.

(6) Letter No. $\frac{3\text{-Judicial}}{125}$, dated the 27th January 1892, and enclosure, from the Government of India, Home Department, regarding the remuneration to be given to gentlemen of the medical profession who may be appointed Certifying Surgeons and Inspectors of Factories.

(7) Letter No. 133, dated the 28th January 1892, from the Government of India, Home Department, communicating the Secretary of State's sanction to the appointment of a special Inspector of Factories for the Lower Provinces and the North-Western Provinces and Oudh.

(8) Letter No. 278B., dated the 30th January 1892, from the Quartermaster-General in India, recommending, on sanitary grounds, the appointment of Civil Surgeons to be Inspectors of Factories within cantonment limits.

(9) Letter No. 209, dated the 15th February 1892, and enclosure, and endorsement No. 294, dated the 27th January 1892, and enclosure, from the Government of India, Home Department, regarding the jurisdiction and emoluments of the special Inspector of Factories for the Lower Provinces and the North-Western Provinces and Oudh.

(10) Letter No. 151M.G., dated the 14th March 1892, and enclosure, from the Commissioner of the Presidency Division, suggesting amendments in the rules which were published in draft for public criticism.

(11) Memorandum No. 567R., dated the 29th March 1892, and enclosures, from the Public Works Department of this Government, placing the services of Mr. C. A. Walsh, of the Superior Revenue Establishment of State Railways, at the disposal of the General Department for employment as special Inspector of Factories in Bengal and the North-Western Provinces and Oudh.

It appears to the Lieutenant-Governor to be desirable, when publishing the revised rules under the Indian Factories Act, to take the opportunity to place on record the principal amendments made in the original Act XV of 1881 by Act XI of 1891, which came into force on the 1st January 1892.

2. The principal changes made by the new Act XI of 1891 are as follows:—

(1) The meaning of the term "factory" has been changed, so that it now includes premises (of certain descriptions) where 50 workmen, not 100 as formerly, are employed.

Section 3 of Act XI of 1891.

(2) The term "factory" may be extended to include other premises, for all or sundry purposes, if less than 50, but not less than 20 workmen are employed.

Section 18 of Act XI of 1891.

(3) The term "child" now includes any person under the age of 14 years, and not 12, as formerly. Now, no child under the age of 9 may be employed; formerly, no child under 7 could be employed.

Sections 5 and 9.

(4) Inspectors of factories can now be appointed either by name or by office, and, besides any other persons who may be so appointed, the District Magistrate remains Inspector of all factories in his district.

Section 6.

(5) The payment of prescribed fees to certifying surgeons for examining children and granting certificates of age to them, has now been provided for by the law, instead of being left to executive order.

Section 8.

(6) The fraudulent use of certificates of age has been made punishable with fine.

Section 15(2).

(7) An interval during the day for food and rest is to be allowed to all operatives, and not to children only as before. Sunday holidays are, with some small exceptions, to be obligatory for all operatives.

Section 10.

(*a*) There must be a stoppage of work for a full half hour between noon and 2 P.M., except in factories in which a system of employment in shifts or sets approved by the local Inspector is in force.

(*b*) Employés may work on Sundays to examine and repair machinery, but otherwise no person may be employed in a factory on a Sunday, unless he has had or will have a holiday on one of the three days preceding or succeeding the Sunday.

(*c*) The Governor-General in Council may exclude any class of factories from the operation of the rules as to holidays and stoppage of work, and the Local Government may allow Sunday labour in factories where certain kinds of necessary work are performed.

(8) Special provision has been made for the protection of women and children. No woman may be employed before 5 A.M. or after 8 P.M. No woman may be employed for more than 11 hours in any one day, and every woman is to be allowed rest in the proportion of 1½ hours to 11 hours' actual work. Factories of any class employing women in particular processes may be exempted from these provisions. No child may be employed before 5 A.M. or after 8 P.M.

Section 10.

The maximum employment for a child has been reduced from 9 to 7 hours, and for every 6 hours' actual work a child must be allowed an interval of half an hour.

Notices are to be put up in English and the vernacular, showing the intervals of rest allowed for women and children.

(9) Rules can be made for the water-supply, proper ventilation, and sanitation of factories; also for the prevention of overcrowding in them.

Section 16.

(10) Occupiers of factories can be required to furnish such returns, occasional or periodical, as may be necessary for the effectual carrying out of the Act.

Section 16.

3. It has been announced that it is not the intention of the Governor-General in Council to exercise the powers enabling him to exempt persons and factories from the rules which require stoppage of work for food and rest and cessation from Sunday labour, and regulate the employment of women, except in cases in which the parties interested make, through the Local Government, a formal application for exemption and bring forward convincing reasons in justification of their proposals. The Local Government will then determine upon the representations of those interested in the industries concerned, and upon a review of the circumstances of each case, what industries are entitled to exemption under the powers which the Act enables it to exercise. It is the intention of the Government of India to allow Sunday labour only in rare and exceptional cases, in addition to the cases in which the Local Government can allow it in factories where certain kinds of necessary work are performed. The Local Government will decide whether the work performed satisfies the conditions of any one of the three heads specified, *i.e.*, where the work performed (*i*) necessitates continuous production for technical reasons, or (*ii*) supplies the public with articles of prime necessity which must be made every day, or (*iii*) by its nature cannot be carried on, except at stated seasons, or at times dependent on the

irregular action of natural forces, but, if it does, the exemption will be granted as a matter of course.

4. With a view to securing a strict observance of all the provisions of the Factory Act, it has been decided to appoint a special Inspector under section 3 of Act XV of 1881 for Bengal, and his services will also be utilized in the North-Western Provinces and Oudh. Should it be found feasible and expedient hereafter to extend his jurisdiction, this will be done; but for the present it will be limited to the provinces mentioned. Mr. C. A. Walsh of the Locomotive Department of the Superior Revenue Establishment of State Railways has been selected for the post, and his appointment will be duly notified.

5. Besides the special Inspector, the Civil Surgeons of districts, or private medical practitioners, if suitable persons can be found, will also be appointed Inspectors conjointly with District Officers. The medical men so appointed will also be the Certifying Surgeons under section 5 of the Act, as the Lieutenant-Governor believes that the amalgamation of the duties of Inspector and Certifying Surgeon will help to secure the more effective performance of the duties of inspection. In the case of children employed in a factory, when an Inspector, seeing them at work, has reason to believe them to be under the age limit prescribed by the Act, he can take evidence on the spot or otherwise. He would also be entitled to take exception to the certificate which a child holds as not applying to him, and to prohibit his employment until he procured another certificate; and, if he had been himself the certifying officer, he could probably say whether a particular child was of such an age or physique that the certificate produced would have been signed by him. A medical officer would be the best authority on all questions of sanitation in connection with factory labour, and his visits of inspection should be made at irregular hours. The duties of the medical officer will be limited generally to seeing that the provisions of the law as regards children are not infringed, and to suggesting sanitary improvements to the Magistrate, who, by virtue of his office, will be an Inspector. In the 24-Parganas, where the time of the District Magistrate is already fully occupied, the senior Covenanted Assistant or Joint-Magistrate will be the *ex-officio* Inspector.

6. Under section 5 of Act XV of 1881 as amended, a fee of 4 annas will be paid to the Civil Surgeons of districts, or such other persons practising medicine or surgery as the Local Government may from time to time declare to be Certifying Surgeons for any local areas, for each certificate granted by them. The same medical officers, who will be appointed under section 3 of the Act by name or by office to be Inspectors, will also be required to give the necessary certificates of age under section 5. These officers will be as follows:—

I. In the district of the 24-Parganas—

(1) The Resident Medical Officer of the Campbell Medical Hospital, for so much of the town of Calcutta as lies to the south of Canning Street, and for Sealdah.

(2) The Resident Medical Officer of the Mayo Hospital, Calcutta, for so much of the town of Calcutta as lies to the north of Canning Street.

(3) The Civil Surgeon of Hooghly for thána Naihati, in the 24-Parganas.

(4) The Station Staff Surgeon of Dum-Dum for that sub-division.

(5) The Medical Officer in charge of the Northern Suburban Hospital for Baranagore in the 24-Parganas.

(6) Mr. J. M. Comley, M.R.C.S., for the factories at Budge-Budge.

(7) The Civil Surgeon of the 24-Parganas, for the rest of the district.

II. For all other districts, the Civil Surgeon of the district.

The officers indicated in this paragraph will notify to the managers of the factories with which they are respectively concerned the place where and the time when they will be prepared to examine candidates for employment and grant certificates of age.

7. A Committee composed of the officers and gentlemen named in the margin was appointed to assist Government in framing the rules and forms of registers under the Acts. The rules, &c., as framed by them were published in draft as required by the law, and criticisms were invited for a period of two months. A few

Mr. A. Smith, C.S., President.
" E. N. Baker, C.S.
" W. Fiddian, C.S.
" J. Lambert, C.I.E.
The Hon'ble J. L. Mackay, C.I.E.
Raja Piari Mohan Mookerjee, C.S.I.

criticisms have been received, and the rules finally approved by the Lieutenant-Governor, after consideration of the suggestions made, are now published for general information. No rules regarding the fencing of machinery and mill-gearing, and for regulating the superficial, cubic and ventilating space per operative, have been at present laid down. But the Lieutenant-Governor will be prepared to prescribe any rules which experience and the reports of the several Inspectors may hereafter show to be required.

8. The notification of the Government of India, No. 428, dated 25th March 1892, under section 18, clause (2) of the Indian Factories Act XV of 1881, as amended by Act XI of 1891, has been attached to the Rules under the Act for convenience of reference.

ORDER.—Ordered that a copy of the Resolution and of the Rules be forwarded for information to the—

(1) Commissioners of Divisions and for favour of communication to District Officers for their information and guidance ;
(2) Commissioner of Police, Calcutta ;
(3) Quartermaster-General in India, with reference to his letter No. 278, dated the 30th January 1892 ;
(4) Inspector-General of Civil Hospitals ;
(5) Appointment Department of this Office ;
(6) Financial Department of this Office ;
(7) Accountant-General, Bengal ;
(8) Mr. C. A. Walsh.

Ordered also that copy be submitted to the Government of India in the Home Department, for information.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

METALWARE EXHIBITION TO BE HELD IN LONDON IN JUNE, 1892

The following is published for general information.

C. E. BUCKLAND,

Secretary to the Govt. of Bengal.

REVENUE DEPT.—*Miscellaneous,*
The 3rd May, 1892.

Circular No. $\frac{15}{8}$, dated Simla, the 21st April 1892.

From—SIR E. C. BUCK, KT, Secretary to the Government of India, Revenue and Agricultural Department,

To—

IN continuation of the telegram from this Department dated 2nd instant, I am directed to state that intimation has been received that the official opening of the Imperial Institute will not take place this year. It has been decided, however, by the Executive Council of the Imperial Institute to organize an Exhibition of Indian metal-work during the summer, and to invite loans of art-ware specimens from manufacturers, dealers, and owners for the purpose. This Exhibition will be opened in June, 1892.

2. The accompanying form and instructions have been received from Sir Frederick Abel, Secretary to the Council of the Imperial Institute, and I am to request that, with the permission of , they may be circulated to large merchants and dealers, and, if necessary, published in the local Gazette for the information and guidance of persons desirous of exhibiting. Arrangements should be made for the despatch of exhibits direct to the Secretary to the Imperial Institute, London, S. W., to whom the applications received may also be posted direct by the Local Government.

3. No charge will be made to merchants for space in the building. Large manufacturers and dealers will have to defray the cost incurred for the casing, &c., of their specimens, but in the case of artizans who contribute specimens for

exhibition, the Institute will defray the necessary outlay. All other expenses will have to be borne by exhibitors.

4. Any exhibits which may have already been collected under the terms of the circular instructions noted in the margin may be forwarded to the Imperial Institute.

No. $\frac{4}{23}$, dated 27th June, 1891.

No. $\frac{21}{23}$, dated 26th September, 1891.

5. I am to request that the Government of India may be informed by telegraph before the 15th proximo of the total amount of case-room that will probably be required for exhibits from

IMPERIAL INSTITUTE.

Exhibition of Indian Metal-work, 1892.

THE Executive Council invite applications for space from Merchants and Manufacturers in India, and from *boná fide* Importers, for the exhibition of Indian metal-work, including applications of metals in textile fabrics.

Allotments will be made by the Executive Council in accordance with the space available. No charge will be made for space allotted.

Applications to be made through the Local Government or such officers as it may appoint for the purpose on this form not later than——— ————1892.

TO THE SECRETARY TO THE IMPERIAL INSTITUTE, LONDON, S. W., THROUGH THE GOVERNMENT OF————.

Please allot to me (us) the following amount of space for the exhibition of articles described overleaf:—

Floor Space ————————feet × ————————feet.

Wall Space ————————feet × ————————feet.

DESCRIPTION OF ARTICLES.

See Regulation No. 17, page 3.

See Regulation No. 17, page 3.

In case of my application being granted (wholly or in part), I declare that I will strictly adhere to the regulations of the Executive Council, as printed on the next page which I will consider as binding.

Signature of intending Exhibitor or firm of Exhibitors.

Address

LONDON REPRESENTATIVE (IF ANY.)

Name

Address

Date

REGULATIONS.

1. The Exhibition will be opened in or about the month of June 1892, and will remain open for a period of about five months.

2. Signs or descriptive labels, &c., must be submitted to, and approved by, the Executive Council before use.

3. All cases, tables, stands or other fittings must be provided at the cost of the Exhibitor.

4. The rooms in which the Exhibition will be held are 20 feet in height; designs to scale of all trophies, show cases, &c., must, previous to their erection, be approved by the Executive Council.

5. No means of securing or fixing cases or trophies can be permitted which will deface or in any way injure the walls of the rooms.

6. Exhibitors will be required to provide attendants for keeping their stands and exhibits properly cleaned and in good order, or must arrange to have this work done, at their expense, by the Executive Council. All stands should remain uncovered during the hours the exhibition is open to the public.

7. It is probable that the hours during which the Exhibition will remain open to the public will be from 11 A.M. to 10 P.M. on all days except Wednesdays and Fridays, when the hour of closing will be 5 P.M. These arrangements are, however, subject to alteration. The Exhibition will not be open on Sundays.

8. No sales will be allowed to take place in the building, but authorised attendants or agents of Exhibitors may take orders for the delivery of duplicates.

9. No exhibit may be removed until the close of the Exhibition without permission of the Executive Council.

10. No article exhibited may be photographed, drawn, copied, or reproduced in any manner whatsoever, without the special sanction of the Executive Council.

11. All packages containing goods intended for exhibition must be addressed to the Secretary, and bear the name of the exhibitor by whom they are sent.

12. All goods intended for exhibition should reach the Institute buildings on or before the 1st of June 1892. Exhibits must be ready for inspection at least two days previous to the opening.

13. All arrangements for the unpacking, arranging and removal of exhibits must be made, and expenses borne, by the Exhibitors, or by arrangements in accordance with 6.

14. The Executive Council reserves to itself the right of refusing to admit any exhibit.

15. The Executive Council reserves to itself the sole right of publishing and selling a Catalogue, and for this purpose requests that a descriptive list, duly classified, of the goods intended for exhibition may be forwarded to the Secretary by the respective Exhibitors not later than the 1st of June 1892.

16. The Executive Council, while taking every precaution for the protection of articles in the buildings, cannot hold itself responsible for their loss or damage from whatsoever cause arising.

17. Only objects of British East Indian manufacture will be admitted. This rule can only be relaxed by special permission of the Executive Council.

18. All communications to be addressed to the Secretary of the Imperial Institute London, S. W., and to have marked on the cover the words "Indian Metal-work Exhibition."

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 30th April 1892.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
BURDWAN DIVN.			
1	Burdwan April 30, '92 Kalna ... Katwa ... Raniganj ...	Nil 2·07 0·70 0·07	Weather—hot and generally cloudy. Rain has done some good. Ploughing going on. Sugarcane planted. More rain badly needed. Prices of common rice:— Srs. Sadar ... ... 11 to 16 } Kalna ... ... 10 to 13½ } per rupee. Katwa ... ... 12¾ } Raniganj ... ... 14 }
2	Bankura .. 30, '92	Nil	Weather—very hot and cloudy at nights. Rain wanted very badly for agricultural operations. Tanks generally empty. Health of cattle fair, but supply of water and fodder insufficient. Common rice is selling at 14 seers per rupee at Bankura as well as at Vishnupur.
3	Birbhum .. 30, '92	0·10	Weather—hot. Hail yesterday afternoon (29th). Fodder and water scarce. Prices stationary, *i.e.*, 13 to 16 seers per rupee.
4	Midnapore .. 30, '92	Nil	Weather—very hot. In some parts there was a shower of rain, but there was none in Midnapore town. Fields are being ploughed after the rain. Crops doing well. Prices of common rice:— Srs. Sadar ... ... 13 } Contai ... ... 12 } per rupee. Tamluk ... ... 12 } Ghatál ... ... 13½ }
5	Hooghly .. 30, '92 Serampore ... Jahánabad ...	1·17 0·3 Nil	Weather—hot. Some relief experienced from rain on 28th and 29th. Prospects greatly improved by the rain, which seems to have been both heavy and general No complaints about water or fodder this week. Prices of common rice:— Srs. Ch. Sadar ... ... 10 0 } Serampore ... ... 11 12 } per rupee. Jahánabad ... ... 13 5 }
6	Howrah .. 30, '92	0·87	Weather—hot and sultry. General rain throughout the district. More is wanted for ploughing. Paddy sowings on low lands going on. Condition of cattle good. Fodder and water-supply sufficient. Price of rice from 10 to 13 seers per rupee.
PRESIDENCY DIVN.			
7	24-Parganas .. 30, '92	0·87	Weather—very hot. Prospects continue unchanged. Slight rain on 29th and 30th, but not enough. More rain wanted everywhere both for cultivation and for supply of drinking water. Condition of cattle good. Fodder still available. Price of rice remains as before, *i.e.*, 10 to 12½ seers per rupee.
8	Nadia .. 30, '92 Kushtia ... Meherpur ... Ranaghat ...	0·71 Nil Nil Nil	Weather—hot. Ploughing and sowing going on, but rain urgently wanted. Common rice selling at from 10 seers 2½ chitaks to 13 seers 5 chitaks per rupee. Cattle-disease reported from Nadia outpost and Hanskhali thána. Supply of fodder sufficient.
9	Khulna .. 30, '92 Bágerhat ... Satkhira ...	0·50 0·16 Nil	Weather—hot; occasionally cloudy with high winds. The little rain which has fallen has done some good, but more is wanted everywhere. Land is being ploughed for *aus* and *áman*. *Boro* harvest going on; outturn estimated at 8 annas. Coarse rice selling at from 12 to 16 seers per rupee. Fodder sufficient, but want of drinking water is still felt in some places.
10	Jessore .. 30, '92 Jhenida ... Magura ... Narail ... Bangaon ...	Nil 0·49 1·91 0·34 Nil	Weather—hot and cloudy with high wind. Ploughing in progress. More rain wanted. Drinking water insufficient. No want of fodder.
11	Murshidabad .. 30, '92	0·97	Weather—hot and dry. Recent rain has greatly improved prospects of *bhadoi* crop. Cultivation is being pushed on. Fodder available for cattle. Coarse rice sells at 12 seers per rupee.
CHITTAGONG DIVN.			
12	Chittagong .. 30, '92	7·67	Weather—squally with heavy downpours on 28th and 29th. Ploughing going on. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
13	Noakhali .. 30, '92 Fenny ...	1·92 2·85	Weather—seasonable. Prospects favourable. *Aus* paddy is being rapidly sown. Fodder and water available. No cattle-disease except in Chhagalnaya. Common rice selling at 13½ seers per rupee.
14	Tippera .. 30, '92	2·77	Broken weather: sunshine alternating with wind and rain. Lands are being ploughed. Prospects improved by rain. Chillies are being harvested. Cattle-disease reported from subdivisions.
15	Chittagong Hill Tracts. .. 29, '92	4·53	Weather—cloudy and sunny with occasional showers of rain. Sowing in *jums* continues. Gathering of tobacco nearly over. Lands are being ploughed for early rice. Cattle-disease still prevailing. Common rice is being sold at 10 seers per rupee.

No	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*			
DACCA DIVN.			
16	Dacca April 30, '92	2·72	Weather—cool and cloudy. Sowing of jute and paddy continues. Prospects of standing crops improved by the recent rain. Fodder available. No cattle-disease. Common rice selling at from 12 to 15 seers per rupee.
17	Faridpur „ 30, '92	1·08	Weather—Thursday's (28th) storm cooled the air for a short time, but it is as hot as ever again now. The rain has done good, and the young crops are coming on, and many fields have been sown during the week. Rice sells at 14 seers per rupee at Sadar and 13 seers at Madaripur. No report from Goalundo. Condition of cattle good.
18	Backergunge „ 30, '92	1·72	Weather—hot and cloudy. Rainfall general throughout the district. State and prospects of crops fair. Sowing of *aus* in progress. Ordinary rice sells at from 9 to 13 seers per rupee. Fodder sufficient; good drinking water scarce.
19	Mymensingh „ 30, '92	3·46	Weather—fairly cool; cloudy with showers of rain. Prospects of standing crops good, but the heavy showers have done some injury to *aus* and jute sowings in the Netrokona subdivision. Common rice selling at from 13 to 15 seers per rupee. Condition of cattle good. Supply of fodder and water sufficient.
RAJSHAHI DIVN.			
20	Dinajpur „ 30, '92 Thakurgaon ...	Nil 0·09	Weather—hot. Cool in the morning. Sowing of *bhadoi*, jute, and sugarcane still continues. Price of rice at Sadar 12 seers per rupee, and at Thakurgaon stationary. Condition of cattle good. Supply of fodder and drinking water now sufficient.
21	Rajshahi „ 30, '92 Nator .. Nowgong ...	0·27 Nil 0·70	Weather—very hot and seasonable. If showers fall now and then, as they have been doing lately, there will be good crops of *aus*, *áman*, jute and sugarcane; at the same time several inches of rain would not come amiss. For the present, at any rate, the crops are in a flourishing condition. Water and fodder generally sufficient, save in the Barind; condition of cattle is generally good except for a few cases of small-pox in Nator subdivision. Prices of rice range from 10½ seers to 15 seers per rupee.
22	Rangpur „ 30, '92 Gaibanda ... Kurigaon ... Nilphamari ...	0·27 3·05 0 77 0·22	Weather—cool and cloudy. *Aus* and jute sowings complete; weeding in progress. Prospects favourable. Fodder and water sufficient. Average price of common rice 12 seers per rupee.
23	Bogra „ 30, '92 Sherpur ... Naukhila ...	0·90 0·44 0·54	Weather—hot and fine in the early part of the week. Rainy and very cool from the 26th. Fine weather is wanted now that a sufficiency of rain has fallen. There is plenty of fodder and water, and the prospects of the crops are good. Common rice sells on an average at 13½ seers per rupee.
24	Pabna „ 30, 92	0·21	Weather—hot and cool. There is a gathering of clouds almost every evening, but no fall of rain. Ploughing and sowing in full progress, but unless there is more rain, the seedlings are likely to be injured. Rice is selling at 13 seers per rupee. Fodder and water-supply sufficient except at Dulai.
25	Darjeeling „ 30, 92	2·04	Weather—fair with occasional breaks. Rainfall in the Terai 0·60. Sowing of jute and *bhadoi* progressing. Wheat and barley are still being harvested. *Aghani* paddy is being sown. Fodder and water-supply improved by rain. Cattle-disease in some parts of the hills.
26	Jalpaiguri „ 30, '92	0·50	Weather—slightly cooler. Rain has improved agricultural prospects. Sowing of *bhadoi* and jute progressing rapidly. Common rice sells at from 10 to 11 seers per rupee. No cattle-disease reported. Fodder and water-supply sufficient.
BIHAR.			
27	Monghyr „ 30, '92 Begusarai ... Jamui ...	Nil 1·43 Nil	Weather—hot, with west wind during the first part of the week; cooler with east wind during the latter part. Ploughing for *bhadoi* crop in progress. *Sama*, *kheri*, *cheena*, sugarcane, and indigo doing well. *Cheena* is being reaped. Water continues to get scarcer. Fodder sufficient.
BHAGALPUR DIVN.			
28	Bhágalpur „ 30, '92	Nil	Weather—hot with easterly wind. *Cheena* is being harvested. Rice and *mung* sown broadcast in low lands doing well. A little *makai* has been sown on the diáras. Ploughing active, but more rain wanted, especially in the south. *Mahua* has given a 12-anna outturn. Water low; but fodder is sufficient, and cattle are healthy.
29	Purnea „ 30, '92 Kishanganj ... Araria ...	0·05 0 07 0·23	A few local showers. Weather cloudy and hot. Ploughing and sowing continue. A good deal of early paddy is up and doing well. *Cheena* crop to the west is excellent. No cattle-disease or want of fodder or water. Prices of common rice:— Srs. Sadar ... ... 11 to 12 } Kishanganj ... ... 11 } per rupee. Araria ... ... 12 to 13 }
30	Malda „ 30, '92 Gajol ..	2·57 0·16	Weather—hot and bright in the beginning of the week; latterly heavy showers. Condition of *boro* paddy continues satisfactory. It is now coming into maturity. Sowing of *bhadoi* rice progressing. Supply of fodder sufficient. No cattle-disease. Prices stationary.
31	Sonthal Parganas „ 30, 92 Deoghur ... Godda ... Jamtara .. Pakur ... Rajmahal ...	0·17 Nil Nil Nil Nil 0·24	Weather—cloudy, with variable winds. Slight rain at Dumka and Rajmahal. Sugarcane doing well except where water has failed. *Mahua* poor. In Rajmahal the strain has been eased by the *boro* rice harvest. Rain urgently wanted all over west of district. Jamtara people are storing roots. Ploughing begun where possible, chiefly in Pakur. Rice 11 to 13 seers per rupee. Water and fodder-supply short in west.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BIHÁR—concld.					
Patna Division.	32	Patna	April 30, '92	Nil	Weather—hot. East wind prevailing. Winnowing of *rabi* crops going on. *Cheena* and sugarcane are being irrigated. Common rice is being sold at from 11 to 12 seers per rupee.
	33	Gaya Jahánabad Nawáda Aurangabad	" 30, '92	Nil Nil Nil Nil	Weather—very hot with changeable winds. Sugarcane and *cheena* millet, the only crops on the ground, doing fairly well. Prices pretty stationary. Supply of fodder and water very scanty in most parts of the district.
	34	Shahabad Buxar Bhabhua Sasarám	" 30, '92	Nil Nil Nil Nil	The winds during the week have been variable, but latterly they have shifted to the west, causing a considerable increase in temperature. Millet, Indian-corn and sugarcane are now nearly the only crops on the ground; all are doing well. An immense export of wheat to Calcutta is taking place, which is affecting prices. Opium weighment in full swing.
	35	Darbhanga	" 30, '92	0·29	Beginning of week very hot, but owing to storm with hail, weather much cooler at end of the week. Rain has benefited sugarcane, but more wanted for *bhadoi* cultivation and for indigo which is now above ground. Fodder sufficient, but water scarce in places. Price of coarse rice varies from 10 to 13 seers per rupee.
	36	Muzaffarpur Hajipur Sitamarhi	" 30, '92	Nil Nil 1·16	Weather—hot with variable winds, chiefly easterly, accompanied with dust-storms. The late rain (on 22nd) was of much benefit to the sowings of *dhan, mung, cheena,* &c., in the northern half of the Sitamarhi subdivision; elsewhere rain is still much wanted. Water in tanks and wells throughout the greater part of the district is becoming low. Prices are rising as the rain holds off, and numbers on relief works steadily increasing. Condition of cattle continues good.
	37	Saran	" 30, '92	Nil	Weather—unusually hot. Rain much wanted for indigo and *cheena*. Prices of common rice:— Srs. Ch. Chapra ... ... 11 14 } per rupee. Siwán ... ... 12 4 } per rupee. Gopalganj ... ... 12 0 } per rupee.
	38	Champaran	" 30, '92	Nil	Weather—hot. Paddy seedlings are growing where sown. *Cheena* and paddy are still being sown. Common rice selling at 11 to 12 seers per rupee in the Sadar subdivision. Fodder and water plentiful.
ORISSA.					
Orissa Divn.	39	Cuttack	" 30, '92	Nil	Weather—hot and dry. Rain very badly wanted. Insufficiency of fodder-supply reported in parts. Price of common rice stationary: 11 to 17 seers per rupee.
	40	Puri	" 28, '92	Nil	Weather—seasonable. Rain wanted. *Dalua* is being harvested. Miscellaneous crops good. Common rice sells at from 12 to 15 seers per rupee.
	41	Balasore	" 30, '92	Nil	Weather—hot and dry. Cultivation is much retarded by the long-continued drought, and drinking water becoming scarce in places. Rice sells at 14 to 16 seers per rupee.
CHOTA NAGPUR.					
South-West Frontier Agency.					
Chota Nagpur Divn.	42	Hazáribágh Giridi	April 30, '92 ...	Nil Nil	Weather—very hot. Mango expected to yield from 4 to 12 annas. Coarse rice selling at from 12 to 14 seers per rupee. Fodder and water getting scarce in some places.
	43	Lohardaga	" 30, '92	Nil	Weather continues very hot. No crop on the ground. Common rice selling at 13 seers per rupee. Price of fodder rising.
	44	Palámau	" 29, '92	Nil	Weather—very hot. Sugarcane doing well. Gathering of *mahua* finished. Price of common rice stationary. Supply of water and fodder scanty, especially in thána Hossanabad.
	45	Singhbhum	" 30, '92	Nil	Weather—intensely hot. Mango crop doing well excepting at Dumuria outpost jurisdiction, where the probable outturn is put down at 2 annas. Price of rice stationary. No complaints in regard to fodder and water-supply.
	46	Manbhum Gobindpur	" 30, '92 ...	Nil Nil	Weather—very hot. Rain urgently wanted. Fodder and water-supply greatly diminished. Rice sells at 12 to 17 seers per rupee.

Published for general information.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 30th of April 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District observations. Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 1st April 1892. Mean for district.	Since 1st April 1892. Normal mean.	Since 1st April 1892. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—.... indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 3rd May* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 30TH OF APRIL 1892.

DURING the greater part of the previous week conditions had been slightly disturbed, and local storms with rain had been numerous in East and North Bengal. On the last day or two, however, the number of nor'-westers which had occurred had became much smaller, and weather was generally becoming fairly settled. The changes of meteorological conditions which occurred on the 24th were generally very small and of little importance, and weather therefore continued fine, but the readings recorded on the morning of the 25th instant showed that a very rapid fall of pressure had occurred, which had formed a well-defined though rather shallow barometric depression in Bihár with a centre near Bhágalpur, where pressure was about a quarter of an inch below the normal, and which feeble depression produced a slight cyclonic circulation of winds over a part of the province; while apparently, owing also to the existence of this depression, extremely strong moist winds set in over the head of the Bay, and spread over a large part of the interior of the province. Conditions continued to a great extent unaltered on the 26th, while on the 27th a very rapid increase of pressure took place, the rise being very large in the north of the pressure, and at Dinajpur it almost equalled a quarter of an inch. These disturbed conditions naturally gave rise to a few local storms with rain in East and North Bengal, but the falls were not very general. On the 28th pressure continued to rise generally over the province, but there were a good many stations reporting local falls of the barometer, again pointing to the existence of disturbed conditions; and on the 28th a considerable number of stations in the eastern and northern districts reported moderate rain accompanying local storms. On the 29th the pressure changes continued rather irregular, and local storms were reported in the central and south-eastern districts; but on the 30th a very rapid fall of pressure took place, particularly in North-East Bengal, where again pressure became nearly a fifth of an inch below the normal, while the general pressure over the province was a tenth of an inch in defect. Again, owing to the existence of these disturbed conditions, local storms with rain occurred in the southern, eastern and northern districts, and on this day a few stations in North Bihár even reported rain. It will thus be seen that for the greater part of the week conditions have been disturbed, principally in the eastern and northern districts, and thus local storms with rain have been rather numerous. The meteorology of the week has also been characterised by the unusually large barometric changes which have occurred, and by the tendency to the formation of low-pressure areas in the north and north-east of the province, and probably in consequence of this distribution of pressure by the existence of unusually strong southerly winds at the head of the Bay.

Pressure.—The mean pressure for the week has been largely below the normal, the defect at the majority of stations exceeding a tenth of an inch, and generally varying from 0·09" to 0·12". The defect is largest at Sibsagar, where it equals 0·134." and in Assam generally it equals 0·11." It has also been rather large at the stations in Central and West Bengal and South Bihár, where at the beginning of the week a distinct barometric depression existed.

Temperature.—The variations of temperature have also been very considerable during the week, and the average mean temperature of the whole province has been no less than 3·4° in excess of the normal, while in South Bihár and Chota Nagpur the excess has been as large as 5°. In Assam, on the other hand, the excess has only equalled 0·8°.

Some very high maximum temperatures have been recorded during the week, and thus temperatures of from 110° to 113° have been registered at Cuttack, Balasore, Midnapore, Bankura, Raniganj, Dehri, Arrah, Gaya, and Chaibassa.

Rainfall.—The average fall of rain in East Bengal during the week has been 2·68 inches, or about 18 per cent. in excess of the usual fall for the period. North Bengal has averaged 0·80 inch and South-West Bengal 0·50 inch, or about half the normal fall in each case. North Bihár has received the small fall of 0·12 inch, but the other divisions have been practically rainless. These falls, from the nature of the rainfall, have been rather unequally distributed. In East Bengal the districts of Chittagong, Chittagong Hill Tracts, and Tippera have received abundant rain, and the remaining districts, and particularly Faridpur, less abundant rain. In North Bengal, Darjeeling, Pabna, and Malda have received decidedly heavy rain. Bogra and Dinajpur moderate rain, and the other districts smaller amounts. In South-West Bengal, Murshidabad, 24-Parganas, Howrah, Hooghly, and parts of Burdwan and Jessore districts have received good rain, and the other districts small amounts; and finally, in North Bihár the falls have been mainly confined to the Purnea and North Bhágalpur districts, though a few showers have also fallen in the Darbhanga district.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday the 30th of April 1892:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1892.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; ⋖, lightning.

* Includes 187 tons and 254 tons of coal during 1892 and 1891, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock 125 tons and 66 tons for the years 1892 and 1891, respectively, for which no "Up" and "Down" register maintained.

Statement of principal commodities carried on the Bengal Central Railway during the month of February 1892.

INCREASES.

	Tons.
Rice	1,017
The chief increase is in despatches from Bongong, Khulna, and Nawapara. This is due to a rise in prices in the Calcutta market.	
Betel-nuts	769
From Bengal Central Flotilla stations exclusively *viâ* Khulna.	

DECREASES.

	Tons.
Coal	1,972
Ordinary fluctuation.	
Jute, unscrewed	323
The decrease is in despatches from Khulna, said to be due to short crop.	

P. BARCLAY,
Traffic Superintendent.

CALCUTTA, *the 27th April* 1892.

EASTERN BENGAL STATE RAILWAY.

Abstract of principal commodities carried over the Eastern Bengal State Railway during the month of February 1892, *as compared with the same month of the previous year.*

* Includes 1,179 tons and 8,806 tons during 1892 and 1891, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock 8,957 tons and 9,413 tons for the years 1892 and 1891, respectively, for which no "Up" and "Down" register maintained.

Statement of principal commodities carried on the Eastern Bengal State Railway during the month of February 1892.

INCREASES.

	Tons.
Coal	6,730
Partly due to provision for brick-burning.	
Rice	5,290
The chief increase is in despatches from Goalundo, Joypurhat, Nawabganj, and Sara Ghat. This is due to a rise in prices in the northern districts. Magra Hât also contributed to the increase, due to the water in the canal being too low to admit of country boats carrying the traffic.	
Seeds	3,044
Chiefly from Sirajganj, Kasba, and Araria. The demand in Calcutta was brisk.	

DECREASES.

	Tons.
Jute, unscrewed	18,011
The decrease was general at jute-booking stations, due to short crop.	
Jute, screwed	4,723
Haldibari, Daroani, Jalpaiguri, Kalir Bazar, and Mymensingh show the principal decreases, due to short crop.	

P. BARCLAY,
Traffic Superintendent.

CALCUTTA, *the* 27*th April* 1892.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 7th May, 1892.

Division	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
BURDWAN DIVN.	1	Burdwan May 7, '92 Kalna ... Katwa ... Raniganj ...	Nil Nil Nil Nil	Weather—very hot. Rain badly wanted. Sugarcane and *til* poor. Water running very short. Prices of common rice:— Srs. Sadar ... ... 13 to 16 per rupee. Kalna ... ... 10 to 13½ per rupee. Katwa ... ... 12¾ per rupee. Raniganj ... ... 14 per rupee.
	2	Bankura „ 7, '92	Nil	Weather—hot and cloudy at nights. Rain much wanted for agricultural operations. Cotton pods have begun to split and *khasla til* is flowering. Condition of cattle fair; fodder and water insufficient. Common rice is selling at 15 seers per rupee at Bankura and 14 seers at Vishnupur.
	3	Birbhum „ 7, '92 Rampur Hát ...	Nil Nil	Weather—very hot and rainless. Fodder and water are scarce. Cattle normal. Prices are now beginning to rise. Common rice sells at from 12 to 15 seers, but in most markets it sells from 13 to 14 seers per rupee.
	4	Midnapore „ 7, '92	Nil	There has been no rain. It is very warm. Indigo is doing well. Want of rain felt everywhere. Drinking water is difficult to get. Prices of common rice:— Srs. Sadar ... ... 13 per rupee. Contai ... ... 12 per rupee. Tamluk ... ... 12 per rupee. Ghatál ... ... 13 per rupee.
	5	Hooghly „ 7, '92 Serampore ... Jahánabad ...	Nil 1·81 0·09	Weather—hot with cool southerly breeze. Planting of early rice deferred for want of water. Fodder-supply adequate; water-supply failing. Prices of common rice:— Srs. Sadar ... ... 10 per rupee. Serampore ... ... 10 per rupee. Jahánabad ... ... 13 per rupee.
	6	Howrah „ 7, '92 Ulubaria ...	Nil 0·50	Weather—hot. Rain wanted for ploughing. Condition of cattle good. Fodder and water-supply adequate. Price of rice 10 to 12 seers per rupee.
PRESIDENCY DIVN.	7	24-Parganas „ 7, '92	Nil	Weather continues very hot. No crops on the ground. Cultivation is much retarded by the long-continued drought, and drinking water is becoming scarce in places. Cow-pox is reported from places in tháua Kulpi. Supply of fodder sufficient.
	8	Nadia „ 7, '92 Kushtia ... Meherpur ... Ranaghat ...	Nil Nil Nil 0·09	Weather—very hot. Sowing of *aus* retarded for want of rain. Coarse rice selling at 10 seers 2¼ chitaks to 13 seers 5 chitaks per rupee. Fodder is ample but water insufficient in places. Cattle-disease reported from Nadia outpost.
	9	Khulna „ 7, '92 Bágerhat ... Satkhira ...	Nil Nil 0·97	Weather—hot with high winds. More rain is wanted. Land is being tilled for *aus* and *áman*. *Boro* is being harvested. Rice selling at from 12 to 16 seers per rupee. Fodder sufficient, but want of drinking water is felt in several places.
	10	Jessore „ 7, '92 Jhenida ... Magura ... Narail ... Bangaon ...	·17 Nil Nil ·35 Nil	Weather—hot and dry. Rain badly wanted for ploughing and sowing which are in progress. No want of fodder. Drinking water insufficient. Price of rice stationary.
	11	Murshidabad „ 7, '92	0·09	Weather—very hot and sultry. *Bhadoi* crop is being sown. More rain wanted. Fodder available for cattle. Coarse rice sells at 12 seers per rupee.
CHITTAGONG DIVN.	12	Chittagong „ 7, '92	4·04	Weather—hot. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali „ 7, '92 Fenny ...	0·04 2·94	Weather—hot and close. *Aus* is still being sown. Prospects good. Fodder and water sufficient. No cattle-disease except in Chhagalnaya. Price of common rice ranges between 13 and 13½ seers per rupee.
	14	Tippera „ 7, '92	0·37	Weather—hot with occasional storms. Sowing of *aus, áman,* and jute progressing. Chillies being gathered. Cattle-disease abat-ng. Prices stationary. Prospects much improved.
	15	Chittagong Hill Tracts. „ 6, '92	5·53	Weather—cloudy with heavy showers of rain during the first part of the week, and very hot during the latter part. Sowing in *jums* continues. The fall of rain rendered much good to the *jum* cultivation and other vegetables. Cattle-disease still prevailing. Common rice selling at 10 seers per rupee.

Division	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—concld.					
DACCA DIVN.	16	**Dacca**	May 7, '92	0·41	Weather— hot and cloudy and rainy at intervals. Rains were heavy in Munshiganj subdivision. Sowing of jute and paddy going on vigorously. Recent rain has done good to the standing crops. Fodder available. Condition of cattle generally good. Common rice selling at from 12 to 15 seers per rupee.
	17	**Faridpur**	„ 7, '92	0·75	Weather—extremely hot. Prospects of crops fair, but more rain wanted. Common rice selling at 13 seers per rupee at the Sadar and also at both subdivisional head-quarters. Condition of cattle good.
	18	**Backergunge**	„ 7, '92	Nil	Weather—hot and damp. State and prospect of crops not satisfactory. Sowing of *aus* is in progress. Ordinary rice sells at from 9 to 13 seers of 80 tolahs a rupee. Fodder sufficient; good drinking water scarce.
	19	**Mymensingh**	„ 7, '92	0·86	Weather—seasonable. The prospect of standing crops continues to be good. Rice is sold at from 12 to 15 seers per rupee. The outturn of *boro* is expected to be 10 to 12 annas. Condition of cattle is good. Supply of water and fodder is sufficient.
RAJSHAHI DIVN.	20	**Dinajpur** **Thakurgaon**	„ 7, '92 ...	2·49 0·35	Weather—cool and cloudy. The rain has done immense good to the standing crops. Sowing of *bhadoi*, jute and sugarcane finished. Price of rice both at Sadar and Thakurgaon stationary. Condition of cattle good. Supply of fodder and drinking water sufficient.
	21	**Rajshahi** **Nator** **Nowgong**	„ 7, '92	0·10 Nil Nil	Weather—very hot, but seasonable. *Aus*, *áman*, *boro* rice and jute are all coming up well, where sown or transplanted. But a great deal of rain is urgently wanted, especially in the Sadar subdivision. Drinking water and fodder sufficient generally. Health of cattle good. Price of rice varies from 10 seers 8 chitaks to 15 seers.
	22	**Rangpur** **Gaibanda** **Nilphamari** **Kurigaon**	„ 7, '92	0·24 0·32 0·14 1·18	Weather—cloudy with slight rain during the week. Weeding in progress. Fine weather would be desirable now. Price of rice steady at 12 to 13 seers.
	23	**Bogra** **Sherpur** **Naukhila**	„ 7, '92	0·05 1·30 Nil	Weather—fine and hot in early part of the week. Changeable with some showers on 6th and 7th. State and prospects of crops good. More fine weather required to check the growth of weeds. Prices stationary. Common rice selling at 13½ seers per rupee.
	24	**Pabna**	„ 7, 92	0·76	Weather—cool in the morning, but hot in the afternoon. There were two heavy rainfalls during the week which have greatly benefited the standing crops. Common rice selling at 13 seers per rupee. Fodder and water-supply sufficient except at Dulai. Condition of cattle good.
	25	**Darjeeling**	„ 7, 92	0·70	Weather—fair with occasional rains. Sowing of jute and *bhadoi* going on; *bhutta*, *chota marwa* and potatoes progressing well. Some cases of cattle-disease in the hills.
	26	**Jalpaiguri**	„ 7, '92	2·13	Weather—hot and cloudy. Sowing of *bhadoi* and jute continues. Prospects improved by rain. Prices stationary. No cattle-disease or want of fodder and water.
BIHÁR.					
BHÁGALPUR DIVN.	27	**Monghyr** **Begusarai** **Jamui**	„ 7, '92	0·05 Nil Nil	Weather—hot with variable winds. Crops on the grounds doing well. Ploughing going on. Rain urgently needed for sowing. Condition of cattle good and fodder sufficient. Water scarce.
	28	**Bhágalpur** **Banka** **Madhipura** **Supaul**	„ 7, '92	0·14 Nil 0·57 0·31	Weather—hot with easterly winds. The rainfall in the north was not general. More rain is much needed everywhere. Sowings of early rice on high lands are drying up, but low land rice is still doing well. Sugarcane coming on well. Fodder sufficient. Water low. Cattle healthy except in one tháná.
	29	**Purnea** **Kishanganj** **Araria**	„ 7, '92	Nil 0·38 0·09	Weather—hot; light clouds from the east during part of the week. The crops are so far doing well. Water and fodder sufficient. Prices of common rice:— Srs. Sadar ... ... 11 to 12 } per rupee. Kishanganj ... ... 11 } Araria ... ... 12 to 13 }
	30	**Malda** **Gajol**	„ 7, '92 ...	Nil Nil	Weather continued very hot till 5th instant. It is cloudy with changeable winds since yesterday. Reaping of *boro* paddy commenced; the estimated outturn is 12 annas. Sowing of *bhadoi* rice not yet finished. Prices stationary. Supply of fodder sufficient. No cattle-disease.
	31	**Sonthal Parganas** **Deoghur** **Godda** **Jamtara** **Pakur** **Rajmahal**	„ 7, 92	Nil Nil Nil Nil Nil Nil	Weather—hot and dry. Clouds and south-easterly wind came up at headquarters yesterday. No rain. Sugarcane, the only crop on the ground, suffering from drought. Fodder and water-supply running short. *Boro* harvest in Rajmahal going on. Rain urgently wanted.

	No.	District and date of return		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BIHÁR—*concld.*					
Patna Division.	32	Patna	May 7, '92	Nil	Weather—hot. Winnowing of *rabi* nearly completed. *Cheena* and sugarcane being irrigated. Common rice selling at from 10 to 12 seers per rupee. No distress anywhere.
	33	Gaya Jahánabad Nawáda Aurangabad	" 7, '92	Nil Nil Nil Nil	Hot winds, westerly for the most part. Sugarcane and *cheena* millet continue to do fairly well under irrigation. Prices show a tendency to rise. Common rice sells at 11 seers per rupee. Supply of fodder and water very scanty in most parts of the district.
	34	Shahabad Buxar Bhabhua Sasarám	" 7, '92	Nil Nil Nil Nil	Light easterly winds with cool weather. Millet is being reaped with good results. The young sugarcane is coming up well. There are no other crops of importance on the ground. Prices are rising in the west of the district; elsewhere they are stationary.
	35	Darbhanga	" 7, '92	Nil	Weather—hot with east winds. Rain is very much wanted for early paddy and *mung*, and also for preparation of lands for *bhadoi* cultivation. Fodder still sufficient, but scarcity of water is felt everywhere. Prices of common rice stationary.
	36	Muzaffarpur Hajipur Sitamarhi	" 7, '92	Nil Nil 0·30	Weather—hot with variable winds, chiefly easterly. The further fall of ·03 in the northern half of Sitamarhi subdivision has been of continued benefit to the *dhan*, *mung*, and *cheena* sowings. Elsewhere rain still much wanted. Prices are fairly steady with a tendency to rise, while the pressure on relief works is not so great as was expected. Condition of cattle continues good.
	37	Saran	" 7, '92	Nil	Weather—hot and dry with cool nights. Nothing doing except irrigation of *cheena*. Rain wanted for it and for indigo. Prices of common rice :— Srs. Ch. Chapra ... ... 11 3 } per rupee. Siwán ... ... 12 4 } Gopalganj ... ... 12 8 }
	38	Champaran	" 7, '92	Nil	Weather—hot. *Dhan* seedlings are growing where sown. Fields are being prepared for *bhadoi* crops. *Dhan* and other crops could not be properly sown for want of moisture. Common rice selling at from 11 to 12 seers per rupee in the Sadar subdivision. Fodder and water sufficient.
ORISSA.					
Orissa Divn.	39	Cuttack	" 7, '92	Nil	Weather—warm and sunny. Rain much wanted for ploughing and for sugarcane and cotton crops yet on the ground. Fodder-supply scanty in places for want of rain. Common rice sells at from 11 to 16 seers per rupee.
	40	Puri	" 6, '92	Nil	Weather—seasonable. Rain wanted. *Dalua* being harvested. Miscellaneous crops good. Common rice sells at from 12 to 15 seers per rupee.
	41	Balasore	" 7, '92	Nil	Weather—hot and dry. Practically no rain for six months. Tanks are drying up everywhere, and ploughing has not yet begun. Rice sells at 14 to 15 seers per rupee.
CHOTA NAGPUR.					
South-West Frontier Agency.					
Chota Nagpur Divn.	42	Hazáribágh Giridi	May 7, '92 ...	Nil Nil	Weather—hot and oppressive. Outturn of mango crop expected at 4 to 12 annas. Common rice selling at 12 to 14 seers per rupee. Fodder and water scanty in places.
	43	Lohardaga	" 7, '92	Nil	Weather continues very hot. Cloudy but no rain. Common rice selling at 13 seers per rupee. Fodder and water insufficient.
	44	Palámau	" 6, '92	Nil	Weather—unusually hot in the early part of the week; since then cooler. Only sugarcane is on the ground. Rain is urgently wanted. Common rice is selling at from 12 to 14 seers per rupee. Prices rising. Supply of water and fodder very scanty.
	45	Singhbhum	" 7, '92	Nil	Weather—very hot; cloudy at times during the last three or four days. The mango crop will not be a good one owing to the want of moisture and to great heat. *Boro dhan* and sugarcane are doing fairly well in Dhalbhum pargana. Prices of rice stationary. Both water and fodder becoming scarce.
	46	Manbhum Gobindpur	" 7, '92 ...	Nil Nil	Weather—very hot; occasionally cloudy. Rice sells at from 11 to 16 seers per rupee. Rain urgently needed. Fodder and water-supply getting scarce.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF APRIL 1892.

At the commencement of the month fine weather of ordinary hot season character prevailed in all districts, though the pressure distribution was a little anomalous, inasmuch as there was a very considerable excess of pressure in the north-east of the province, while the excess diminished rapidly in amount towards the west. Hence easterly and south-easterly winds prevailed generally, and the air was unusually moist. Owing apparently to an increase in the strength of the westerly winds blowing in Central and Upper India, and which began to force back the moist easterly winds blowing in Bengal, conditions began to change from the 4th, from which date local storms with rain commenced in Assam and North Bengal, and which afterwards spread towards the south-west, and fairly general but very irregular rainfall was received in all districts, except parts of Behar and Chota Nagpur and Orissa, during the first week of the month. At the end of this period pressure had fallen to almost its normal amount, while winds had become of the normal westerly character at the western stations and south-westerly in the south-west of the province, while the easterly element in North Bengal and North Bihár had become weak. A few local storms with rain again occurred in the north and centre of the province about the 12th, but the meteorological changes which took place up to this time were generally small. A steady relative increase in pressure at the eastern stations then took place, baric gradients from east to west became steeper, and what was almost a barometric depression was formed in the extreme west of the province, and winds therefore became more easterly than they had been. At this time a series of local storms with rain set in over the greater part of South-West Bengal, the whole of North Bengal, the Purnea, North Bhágalpur, and Darbhanga districts of North Bihár, the Monghyr and South Bhágalpur districts of South Bihár, the Sonthal Parganas, and a considerable part of Chota Nagpur. On the 19th the area of defective pressure in the west of the province extended, and in parts of Bihár and South-West Bengal pressure became from an eighth to a tenth of an inch below the normal, and this defective pressure continued to become more strongly marked up till the 22nd, when there was a defect of about a quarter of an inch in Bihár and North Bengal. Hence baric gradients for the whole of this time were unusually steep in Bengal and at the head of the Bay, and strong winds bringing up much moisture blew over the province from the Bay, and therefore during the whole of this period local storms with rain were numerous in East and North Bengal, while a considerable number of showers also occurred in South-West Bengal, and Orissa. From the 23rd, however, pressure began to increase rapidly, and by the 24th the feeble depression had disappeared. Again on the 25th a rapid fall of pressure gave a well-defined though shallow barometric depression over Bihár, which filled up on the 27th and 28th, while again on the 30th a very rapid fall of pressure took place, particularly in the north-east of the province, where a defect of about a fifth of an inch below the normal was recorded. Hence during the existence of these shallow low-pressure areas strong moist southerly winds were drawn in from the Bay, and a good many local storms with rain occurred, principally in East and North Bengal, up till quite the close of the month.

The principal features in the meteorology of April therefore have been the well-marked tendency to the formation of low-pressure areas or feeble barometric depressions over Bengal, and particularly over the north of the province, which has been accompanied by unusually large oscillations of pressure. With this distribution of pressure the southerly winds blowing from the Bay over Bengal have been exceptionally strong,—far stronger indeed than the winds which are experienced in the south-west monsoon. These strong southerly winds have brought up large quantities of moisture to the province, and have hence facilitated the formation of very numerous local storms or nor'-westers with rain, and thus the rainfall for the month has been rather largely in excess of the normal in East and North Bengal, the excess equalling from more than sixty to about eighty per cent. The rainfall has also been about normal in amount in South-West Bengal and in North and South Bihár; but, on the other hand, it has been very considerably in defect in Orissa and Chota Nagpur.

Pressure.—The mean pressure for the whole month has been very distinctly in defect of the normal. This defect generally ranges from about 0·02" to 0·03" in the south of the province to about 0·05" to 0·06" at the northern stations, the mean defect at such stations as Sibsagar and Gaya being about 0·06" and upwards. In Assam the general defect equals 0·035", which is a little higher than the general defect for Bengal.

Temperature.—The variations of temperature during the month have been rather large. During the first week or ten days the mean temperature of the province was about 2·3° in excess of the normal. During the week ending the 16th of April the excess had fallen to 1·6°, while in the week ending the 23rd the general temperature of the whole province was practically normal, though defects were registered in East and North Bengal and North Bihár, and excess temperatures in Orissa and Chota Nagpur. Finally, during the last week of the month temperature rose very considerably, and became about 3·4° in excess of the normal. Thus the mean temperature of the province for the month has been no less than 1·8° in excess of the normal for the period, but the highest excess has been recorded in South Bihár and Chota Nagpur, where it is from three to three-and-a-half degrees. In Assam the small excess of 0·8° only has been recorded.

The highest temperatures recorded in each of the divisions during the month have been—in Orissa 112·5° at Balasore and 112·4° at Cuttack; in South-West Bengal 112·4° at Midnapore; in East Bengal 98·6° at Dacca; in North Bengal 104·8° at Rampur Baolia and 104·1° at Malda; in North Bihár 110·7° at Chupra; in South Bihár 112·6° at Gaya; in Chota Nagpur 102·3° at Chaibassa, and in Assam 94·8° at Dhubri.

Rainfall.—The falls in East Bengal have averaged more than six and-a-half inches, or two and-a-half inches in excess of the normal, and in North Bengal nearly four and-a-half inches, or about two inches more than usual. South-West Bengal has averaged two inches, North Bihár about an inch, and South Bihár about four-tenths,—in all cases nearly normal amounts. Orissa, however, has only received an average fall of five-tenths, or about one-third of the usual fall, and Chota Nagpur only a tenth of an inch, or less than a quarter of the average amount for April.

Taking up these divisions rather more in detail, in East and North Bengal all the districts have received fairly abundant rainfall; in South-West Bengal Murshidabad, Burdwan, 24-Parganas, Howrah, Hooghly, Nadia, Jessore, and Khulna have received good rain, Midnapore, Birbhum, and West Burdwan moderate rain, and Bankura, South-West Midnapore, and South 24-Parganas light rain only. In North Behar rainfall has been mainly confined to the Purnea and North Bhágalpur districts, and in South Bihár to the South Bhágalpur, Monghyr, and Sonthal Parganas districts. In Chota Nagpur only Manbhum and Singhbhum have received light rain.

In Assam there has been very heavy rain during the month, for Silchar has received 24·90 inches, and Sibsagar 15·19 inches, while Dhubri only reports 3·49 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of April 1892:—

Meteorological Divisions.	Temperature.						Rainfall.							
	Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month.	Of month.			Rainy days.			Since 1st April 1892.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in month.	Normal average number in month.	Variation.	Average.	Normal average.

* Mean of 6 days.

Explanation.—*Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ... The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 7th of May 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	District Observations. Rainfall. Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 1st April 1892. Mean for district.	Since 1st April 1892. Normal mean.	Since 1st April 1892. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 10th May* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 7TH OF MAY 1892.

At the close of the previous week conditions were a little disturbed in Bengal from the fact that a shallow low-pressure area existed over Bengal, the centre of the defective pressure being in North Bengal, where a defect of about a fifth of an inch was registered. With these disturbed conditions a series of local storms or nor'-westers with rain occurred on the evening of the 30th April, the rainfall from which was reported on the morning of the 1st of May, or the first day of the present week, and from this cause the stations in all districts of East Bengal, except parts of Tippera and Mymonsingh, reported moderate rain on this day. Pressure, however, commenced to rise moderately to rapidly on the morning of the 1st; the increase was still more marked on the 2nd, when pressure became above the normal, the excess being small in the south-western districts, while in North Bengal it almost amounted to a tenth of an inch. On the 3rd the pressure changes were small and variable, and on the 4th there was a slow to moderate fall, and on the 5th a slight rise, and the general pressure over the province still remained fairly normal. On the 6th and 7th, however, pressure was generally falling slowly to moderately, and on the latter date pressure became below the normal over the whole province. Hence the disturbed conditions which existed at the commencement of the week rapidly passed away with the disappearance of the depression and the establishment of high pressure, and except in or near the hills in North Bengal, rainfall practically ceased from the 1st. Towards the close of the week, however, with the falling pressures conditions became less settled than they had been, and on the 7th, or the last day of the week, rain which had probably fallen during local storms was reported at almost all the stations in North Bengal and at a few in East Bengal. During the whole of the week the fluctuations of temperature have not been very large, and on the whole temperature has been generally rising. Winds have also been fairly normal in character, being southerly at the southern stations, south-easterly in East Bengal, and easterly along the line of the hills, while at a few of the western stations westerly and south-westerly winds have been reported. Hence these winds have brought up a good deal of moisture to the province, though the number of local storms during the present week has been much smaller than in the previous week, owing to the disturbed conditions being less pronounced. Hence only East and North Bengal have received moderate rain during the week, the amounts being decidedly smaller than the normal for the period, while Assam has also received moderate to heavy rain. The other divisions of Bengal have, however, been almost rainless for the week, as only a few isolated storms have occurred in various districts.

Pressure.—The mean pressure for the week has been decidedly in excess of the normal, the excess usually ranging from 0·03″ to 0·05″. The smallest excess pressures are, however, reported from North Bengal and North Bihár, where they only average about 0·01″ to 0·02″. In Assam also the excess pressures have been comparatively small; and at Dhubri and Silchar they equal about 0·02″, while at Sibsagar even a defective pressure is recorded, but the correctness of this is doubtful.

Temperature—Has been exceptionally high during the week, and the mean temperature for the whole province has been no less than 4·2° in excess of the normal. This excess has been fairly equally distributed except in South-West Bengal, where it equals 5·4°. In Assam there has been an excess temperature of only one degree.

Rainfall.—The average rainfall in North Bengal has equalled about one and-a-half inches, or a little less than the normal fall, while in East Bengal the falls have averaged about nine-tenths of an inch, or not much more than a third of the usual amount. The falls in all other divisions have been so small that rainfall has been practically absent in them.

These falls have also been rather irregularly distributed. In North Bengal the falls have been rather abundant in the districts of Jalpaiguri and Kuch Bihar, and to a less extent in Darjeeling and Rangpur; the other districts generally have received moderate rain except Malda, which has been practically rainless. In East Bengal, Chittagong, Chittagong Hill Tracts, and Tippera have received good rain and the other districts rather small amounts, except in the case of Backergunge which has been rainless.

In Assam during the week Dhubri has received 4·61 inches, Silchar 2·41 inches, and Sibsagar 2·11 inches of rain.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 7th of May 1892:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1892.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·2° lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 9th May 1892.

Abstract of the Results of the Barometric and Thermometric Observations taken at 10 a.m. at the Meteorological Office, Chowringhee, in the month of April 1892.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

J. H. GILLILAND,

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

OUTTURN OF RABI AND SPECIAL CROPS IN BENGAL FOR THE YEAR 1891-92.

THE following are published for general information.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT,
AGRICULTURE;
Calcutta, the 14th May, 1892.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

Outturn of rabi and special crops in Bengal for the year 1891-92.

Rabi crops.—The climatic conditions most favourable to the cultivation of rabi crops in Bengal and Bihár are when monsoon rains cease early in October, but are followed by comparatively fine weather, with a few light showers during the remainder of that month and the first fortnight of November. In December and January there should be showers to enable the crops to attain their full development. At the time of harvesting during the latter half of February and March, the weather should be dry. Continuous cloudy weather at this time causes damage, and is attended with injury from insects of various kinds and from fungoid pests.

In the rabi season, 1891-92, the conditions were unfavourable throughout the greater portion of Bengal and Bihár. Deficient rainfall at the sowing season, towards the end of October and the beginning of November, contracted the area sown in the districts of Patna, Gaya, Darbhanga, Malda, Sonthal Parganas, and Palámau. On the other hand, owing to

the scantiness of the monsoon rains of 1891, and the consequent partial failure of winter rice, there was an extension of the area sown under rabi in Rajshahi, Bogra, Pabna, Faridpur, and Purnea. The deficiency of rain in the latter half of October and the first half of November injuriously affected the outturn also in all parts of South-West, East and North Bengal, North and South Bihár, Chota Nagpur, and Orissa, with the exception of the districts of Mymensingh, Rajshahi, Bogra, and Singbhum, the Sadar subdivision of Balasore, and the subdivisions of Magura, Brahmanbaria, Chandpur, and Banki, in which rain fell in the latter half of October and in the beginning of November. Excessive rain at the time of, and immediately after, sowing reduced the outturn in Singbhum, and in Bhadrak in the district of Balasore. A general drought throughout the rabi season further aggravated the injury. A cyclone in the month of November did much harm to the rabi crops in the Sadar and Kendrapara subdivisions of Cuttack, and in Puri; and hailstorms, when the crops were approaching maturity, did considerable damage in the Sadar subdivision of Faridpur. Locusts injured rabi plants in the Chittagong Hill Tracts. Deposits of silt, however, left by the floods of last year had a beneficial effect on some of the crops in the subdivisions of Goalundo, Brahmanbaria, Chandpur, Banki, and Jajpur.

Taking the Lower Provinces as a whole, the outturn of the rabi crops may be estimated at 9 annas.

Special crops.—During the season which has just expired, deficiency of rainfall throughout the monsoon months from June to October affected the outturn of sugarcane more or less, in all parts of the Lower Provinces, except Chota Nagpur and Orissa. Heavy rain in August, and a cyclone in November, injured the crop in the districts of Cuttack and Puri.

Tobacco.—This crop was damaged by excessive rain and cyclonic winds in the month of November in Cuttack and Puri, and by a total cessation of rain towards the end of the season in February and March in Manbhum. An average crop is reported from the subdivisions of Basirhat, Bangaon, Brahmanbaria, Banki, Jajpur, Kolhan, and from the Sadar subdivision of the districts of Jessore, Chittagong, and Saran.

Poppy.—The outturn of poppy was seriously affected by the very dry weather at the beginning of the season in October in the Sadar and Siwán subdivisions of the district of Saran. This crop was damaged by cloudy and rainy weather at the end of February in the subdivision of Jahánabad, in the district of Gaya, and by high westerly winds in Patna. Hailstorms and high winds also did some harm in Shahabad. A full average crop is reported for the district of Monghyr, and for Hajipur, in the district of Muzaffarpur, but the average outturn throughout the poppy-growing districts is estimated at 11 annas only.

Mulberry.—A full average crop of mulberry is reported from the district of Bogra and from Kandi, in the district of Murshidabad. The average outturn for all mulberry-growing districts is estimated at 11 annas.

The outturn is represented in fractions of a rupee, sixteen annas being taken to represent an average crop.

M. FINUCANE,

Director of the Department of Land Records and Agriculture in Bengal.

The 2nd May, 1892.

STATEMENT III.—*Estimated Outturn of Rabi Crops for the year* 1891-92.

1	2	3	4	5	6	7	8	9	10
DISTRICT.	Sub-division.	Total area of sub-division in square miles.	Total area estimated to be under cultivation in square miles.	Estimated area under rabi crops in square miles.	Names of principal rabi crops of sub-division.	Estimated outturn expressed in annas of current year's rabi crops.	Estimated outturn of previous year's rabi crops.	Remarks by the District Officers.	Remarks by the Agricultural Department, Bengal.
					BURDWAN DIVISION.				
Burdwan	Sadar	1,242	993	31	Peas ... Kalai ... Khesari ... Musoor ... Barley ... Moong ... Oats ... Mustard ... Wheat ...	8 annas	10 annas	The outturn of the current year's crop is poor owing to the failure of rain from October 1891. The rabi crops of the previous year were poor also, owing to want of adequate rain and to the damage caused by locusts.	The total area of the district, as given in the latest Bengal Administration Report, is 2,689 square miles. The conditions of rainfall in Kalna and Katwa were similar. The difference in their outturn is not intelligible.
	Kalna	433	350	100	Wheat ... Barley ... Linseed ... Mustard ... Peas ... Musoor ... Towra ... Gram ... Arhar ... Kalai ...	12 ,,	12 to 14 annas.	The decrease of outturn of the present year's crop is due to the failure of rain since October 1891. The rainfall on the 22nd and 23rd February 1891 partially injured the crops of the previous year.	
	Katwa ...	352	265	8	Pulses ... Oilseeds ... Wheat ...	6 ,,	11 annas	The outturn is poor owing to the want of rainfall.	
	Raniganj ...	671	398	31	Gram ... Peas ... Khesari ... Barley ... Mustard ... Til ... Linseed ... Arhar ... Wheat ... Masuri ... Ganja ...	8 to 10 annas.	14 to 16 annas.	The decrease of outturn of the present year's crop is due to deficiency of rainfall.	
	District Total	2,697	2,006	170	.....	9 ,,	12 ,,		
Bankura	Sadar	1,921	671	4 4 10 10	Wheat ... Barley .. Pulses ... Oilseeds ...	8 annas	8 annas	The continued cessation of rain since the sowing time has affected the outturn.	
	Bishenpur ...	700	354	3 2 5 7	Wheat .. Barley ... Pulses .. Oilseeds ...	9 ,,	10 ,,		
	District Total	2,621	1,025	45	.....	8 ,,	9 ,,		
Birbhum	Suri (Sadar)...	1,108.	777	16 13 26 16	Wheat ... Gram ... Pulses .. Oilseeds ...	10 annas	12 annas	The deficiency of rain from the sowing time up to date has affected the outturn of the crops.	The total area of the district as given in the latest Bengal Administration Report, 1,752 square miles.
	Rampurhat ...	648	468	10 12 16	Wheat ... Oilseeds ... Gram ... Pulses ...	10 ,,	12 ,,		
	District Total	1,756	1,245	118	.....	10 ,,	12 ,,		
Midnapore.	Sadar	3,253	1,920	320	Moong ... Khesari ... Arhar ... Linseed ... Gram ... Barley ... Musoor ... Mustard ... Biri ... Jara .. Surgoja ...	8 annas	8 annas	The current year's crop has suffered much from want of rain at the sowing time. Last year's crop suffered from deficiency of rainfall at the sowing time and excess of rainfall at the harvesting time.	The total area of the district as given in the latest Bengal Administration Report, 5,186 square miles.
	Contai ...	861	713	43	Mustard ... Til ... Biri .. Moong ... Khesari ... Matar ...	9 ,,	6 ,,		
	Ghatal ...	366	228	10	Khesari ... Biri ... Moong ...	10 ,,	12 ,,		
	Tamluk ...	583	437	29	Khesari ... Biri ... Moong ...	7 annas	8 ,,		
	District Total	5,063	3,298	402	.....	8 ,,	8 ,,

District.	Sub-division.	Total area of sub-division in square miles.	Total area estimated to be under cultivation in square miles.	Estimated area under rabi crops in square miles.	Names of principal rabi crops of sub-division.	Estimated outturn expressed in annas of current year's rabi crops.	Estimated outturn of previous year's rabi crops.	Remarks by District Officers.	Remarks by the Agricultural Department, Bengal.
					BURDWAN DIVISION—*concluded.*				
Hooghly	Sadar ...	442	276	55	Masuri ... Peas ... Kalai ...	8 annas 8 „ 6 „	10 annas 10 „ 10 „	Owing to deficiency of rain, there is a general decrease in the outturn.	The total area of the district, as given in the latest Bengal Administration Report, is 1,701 square miles.
	Serampore ...	343	250	30	Potatoes ... Kalai, pulse ... Mustard ... Barley ...	10 „ 9 „ 8 „ 8 „	15 „ 15 „ 13 „ 12 „	Owing to insufficient rain, the current year's crop has been a poor one. Untimely rains affected the previous year's crops to some extent.	
	Jahánabad ...	438	262	6	Masuri ... Matar ... Biri .. Linseed ... Mustard ... Soonjee ... Barley ... Moong ...	4 „ 3 „ 3 „ 8 „ 4 „ 8 „ 9 „ 3 „	6 „ 4 „ 4 „ 10 „ 4 „ 10 „ 10 „ 4 „	A low flood in the present year caused a decrease in area under rabi crops as compared with last year. A large quantity of land being dry was sown with paddy in many places. Latterly a general drought caused a decrease in outturn as shown in column 7.	
	Howrah ...	173	94	22	Khesari ... Musoor ... Peas ... Rape seed ... Oat ... Til ...	12 „	14 „	The outturn of this year is less for want of rain.	The outturn of Howrah is not likely to be higher than that of the other sub-divisions of the district. There was a greater deficiency of rainfall in Howrah, as would appear from the following rainfall statement— (Total rainfall from 16th October up to 26th March. / Average rainfall from 16th October up to 26th March.) Howrah ... 0·30 5·16 Serampore ... 0·67 4·85 Hooghly ... 0·38 4·70 Jahánabad ... 0·34 4·28
	Ulubaria ...	303*	200	18	Musoor ... Khesari ... Watermelons and potato. Arhar ... Mustard ... Linseed . Peas ...	7 „	13 „	Owing to the want of rain at the time of ploughing and sowing, the crops have been damaged to a great extent.	
	District Total	1,699	1,082	131	......	7 „	9 „		
					PRESIDENCY DIVISION.				
24-Parganas.	Sadar and amalgamated part of Suburbs, including late Baruipur.	1,070	717	46	Pulses .. Oilseed ... Barley, &c. ...	13 annas	12 annas.	......	The total area of the district, as given in the latest Bengal Administration Report, is 2,132 square miles. The figure given by the Collector includes a portion of the Sundarbans.
	Diamond Harbour.	513	453	9	Khesari ... Peas, &c. ...	2 „ 4 „	16 „	Want of rain both at the time of sowing and growing is the cause of the low outturn.	
	Barasat ...	392	253	40	Moong ... Kalai ... Gram ... Musoor .. Linseed ... Matar .	2 „ 4 „ 2 „ 2 „ 2 „ 6 „	10 „ 12 „ 10 „ 12 „ 8 „ 12 „	Deficiency or rather want of rain from the time of sowing has damaged the crop.	
	Basirhat ...	530	439	7	Gram .. Moong ... Peas ... Khesari ... Rape-seeds ..	8 „	14 „	The absence of rainfall during the months of October and November greatly damaged the crop, and consequently the outturn was very scanty.	
	Barrackpore...	42	10	2	Peas ... Mustard ...	6 „ 6 „	14 „ 12 „	The decrease in outturn is due to the want of rain during the time of growth of the crops.	
	Dum-Dum ...	56	36	1	Peas ..	6 „	12 „	Want of timely rain was the cause of the low outturn of the current year. The rainfall was well distributed in the previous year.	
	District Total	2,603	1,908	105	......	5 „	12 „		
Khulna ...	Sadar ...	1,572	300	31	Mustard ... Til ... Linseed ...	0 annas	8 annas	For want of timely rain the outturn of rabi crops has been affected more or less this year. The outturn of last year was not satisfactory for want of timely rain, and excessive rain when it was not needed.	The total area of the district, as given in the latest Bengal Administration Report, is 2,077 square miles. The figure given by the Collector includes a large portion of the Sundarbans, hence the difference between the two figures.
				37	Turmeric ... Chillies ... Peas ... Musuri ... Khesari ... Arhar ... Moong ... Kalai ... Others ...	12 „ 15 „ 14 „ 14 „ 14 „ 10 „ 12 „ 12 „ 10 „	12 „ 14 „ 12 „ 12 „ 12 „ 11 „ 12 „ 10 „ 11 „

PRESIDENCY DIVISION—*continued.*

1	2	3	4	5	6	7	8	9	10
Khulna...	Satkhira ...	1,273	440	28	Mustard ... Peas ..	8 annas	4 annas	The outturn of rabi crops has been affected more or less this year for want of timely rain. The outturn of last year was not satisfactory for want of timely rain, and excessive rain when it was not needed.	The rainfall in October was below the normal, but the deficiency was made up by the rain which fell in the first fortnight of November. The outturn would have been very good had not want of rain in December and January checked the proper development of the standing crops.
				22	Kalai ... Masuri .. Others ..				
	Bagerhat ...	1,509	520	50	Mustard ...	14 ,,	16 ,,

Nadia ...	Sadar	701	484	156	Wheat ... Barley ...	7 annas	8 annas	The rainfall in the several sub-divisions during the period 16th October 1891 to January 1892 has been rather spasmodic, and has affected the outturn of the rabi crops in the different sub-divisions. Rainfall has been fair in the Sadar sub-division, being only ·40 below the normal.	The total area of the district, as given in the latest Bengal Administration Report, is 2,793 square miles. Deficiency of rain at the time of sowing, and the total absence of rain in December and January, must have materially affected the outturn.

DISTRICT.	Sub-division.	Total area of sub-division in square miles.	Total area estimated to be under cultivation in square miles.	Estimated area under rabi crops in square miles.	Names of principal rabi crops of sub-division.	Estimated outturn expressed in annas of current year's rabi crops.	Estimated outturn of previous year's rabi crops.	Remarks by the District Officers.	Remarks by the Agricultural Department, Bengal.
				PRESIDENCY DIVISION—*concld.*					
Jessore—*concld.*	Narail ...	487	293	60	Peas ... Khesari ... Moong ... Maskalai ... Mustard ... Rye ...	8 annas	10 annas	For want of timely rain the plants have become stunted and are withering away.	
	Magura ...	425	268	53	Rape-seed Mustard ... Linseed . Peas .. Moong Maskalai ...	10 " 10 " 10 " 10 " 6 " 10 "	12 " 12 " 12 " 16 " 16 " 16 "	The deficiency of rainfall and of floods has been unfavourable to the growth of the plants. The prospect was good at the sowing season. Last year the high floods were favourable for the growth of the plants.	The rainfall in the month of October was slightly deficient. In November it was a little above the normal. The outturn would have been good, had it not been for the absence of rain throughout December and January and up to the 8th of February.
	Jhenidah ...	475	320	28	Kalai .. Moong ... Peas . Barley ... Wheat . Gram .. Musur . Chillies .. Linseed ...	6 " 4 " 6 " 4 " 4 " 4 " 2 " 10 " 4 "	16 " 16 " 10 " 12 " 12 " 12 " 6 " 8 " 10 "	Deficiency of outturn is due to the low floods and want of rain in the autumn and winter months.	
	District Total	2,925	1,745	454	......	8 "	11 "		
Murshidabad.	Sadar .	752	519	439	Barley ... Wheat ... Pulses ..	12 annas	16 annas	Want of rain affected the outturn much this year in all the sub-divisions except Jungipore, where it is estimated at 14 annas owing to the absence of floods and to the earlier cultivation of lands. The want of silt deposits has reduced the area of land under cultivation in the Lalbagh sub-division. The previous year's crop suffered much at Jungipore, owing to heavy floods and also t deficiency of rainfall at the proper time.	The total area of the district, as given in the latest Bengal Administration Report, is 2,141 square miles. The area under rabi crops seems to be over-estimated.
	Lalbagh ...	373	257	104	Wheat .. Barley ... Gram .. Musur, &c. ...	11 "	15 "		
	Jungipore ...	508	351	206	Wheat .. Barley ... Pulses ...	14 "	12 "

				RAJSHAHI DIVISION.					
Dinajpur	Sadar . Thakurgaon ..	4,118	2,600	245	Mustard Potato ... Wheat ... Barley Pulse ... Oilseed Brinjal ... Gram ... Chillies	12 annas	12 annas	Owing to partial failure of winter rice on account of insufficient rain, the lands of this crop were utilized for rabi this year.	The total area of the district, as given in the latest Bengal Administration Report is 4,117 square miles. The average rainfall for the rabi season from the 16th of October to the 20th of March for the Sadar station is 3·82 inches. The actual rainfall for this period during the present season has been only 0·34 inches. The deficiency must have injuriously affected the outturn.
	District Total	4,118	2,600	245	. . .	12 "	12 "		
Rajshahi	Sadar ...	914	588	185	Wheat ... Pulses .. Mustard ... Linseed ... Cheena ...	10 annas	8 annas	The rain which fell during September, October, and November, though small, helped the crops generally, and hence the outturn shows a better result, both in the Sadar and Nator sub-divisions, than that of the last year. The outturn in the Nowgong sub-division would have been an average one had it not been affected by deficiency of rain in the latter part of the season. Failure of paddy crops, both at Natore and Nowgong, induced the cultivators to grow rabi crops on the lands on which paddy was grown, and hence the increase in area sown this year.	The tots' area of the district, as given in the latest Bengal Administration Report, is 2,329 square miles.

The long drought between the middle of November 1891 and middle of February 1892 prevented the growth of mustard, and of a few other crops, but the rest started well in favourable circumstances early in the season, and did very fairly. The heavy rain and the silt left by the high floods increased the outturn in 1891 of the crops for which the land had to be ploughed since the third week of October 1890; but those (*e.g.*, maskalai) which were then on the ground suffered from the floods, and others were retarded by the difficulty of timely preparation. Some damage was done at the beginning of November 1890 by locusts in the north-west of the district.

Cheena ...	10 annas 8 " 5 " 4 " 4 "	10 annas 10 " 7 " 7 " 9 "	Absence of flood-water, insufficient rainfall, and deposits of silt, are the main causes of the deficiency of the outturn this year. Failure of the rice crop increased the area sown under oilseeds and sunn.	No rain fell from the 14th of November up to the 8th of February. This greatly impeded the development of the crops, which had started well with the showers that fell in the first week of November. The area estimated to be under rabi crops seems to be too large.

Purnea	Sadar .	2,[illegible]72	1,[illegible]	371	Wheat . Barley .. Gram . Linseed .. Mustard .. Arhar .. Kalai ... Khesari .. Musuri .	3 annas 3 „ 6 „ 8 „ 6 „ 6 „ 4 „ 4 „	15 annas 16 „ 12 „ 16 „	There has been no rain since October, and the weather has been abnormally dry. This drought has seriously affected the germination and growth of the rabi crops. The rainfall last year being sufficient, the outturn of the rabi crops was satisfactory, excepting mustard and linseed, which required dry land	The total area of the district, as given in the latest Bengal Administration Report, is 4,994 square miles.
	Araria ...	1,044	500	130	Wheat .. Rapeseeds ... Gram ... Linseed ... Other crops, such as musuri, matar, khesari, &c.	8 „ 10 „ 12 „ 11 „ 8 „	10 „ 12 „ 12 „ 12 „ 12 „	The increase of the area sown this year is due to the fact that rabi crops were in many places sown on lands ordinarily under winter rice on account of the partial failure of the latter crop. The decreased outturn is due to the unusually scanty rainfall during the year, and also to the fact that no rain worth speaking of fell in the months of December, January, and February. The light shower of rain, however, that fell in February did some good to the standing crops, and had it not been for this the outturn would have been a little less than it is now.	
	Kishenganj ..	1,340	1,005	130	Khesari .. Musuri .. Kalai .. Gram ... Peas ... Moong .. Arhar .. Wheat ... Mustard ... Palamau	Palamau ...	4,260	2,000	Sugarcane .. Poppy ... Jute ...	150 100 50	6 6 6	8 8	One hundred square miles sown under poppy is plainly absurd, as opium cultivation is confined to Pargana Jupla, the total area of which would not be more than 600 or 700 square miles. An enquiry will be made, and correct figures submitted in the next statement.	The figures in columns 3 and 4 evidently exclude pargana Tori, which has lately been transferred to Palamau, and of which the area is not known.
	District Total	4,260	2,000	.	300	......	......		
Manbhum	Sadar ...	3,344	1,300	Sugarcane .. Tobacco ... Indigo .. Babool ...	20 42	16 4 8 8	10 6 12 12	Decrease in outturn except in sugarcane is owing to excessive rainfall in the beginning, and total cessation towards the end of the season.	
	Govindpur ...	803	300	Jute ... .. Tobacco ... Sugarcane ...	6 14	2 4 16	4 8 12		
	District Total	4,147	1,600	.... .	82	... .	.....		
Singhbhum	Kolhan ...	1,946	973	Tobacco ... Sugarcane ...	8	16	16	Sugarcane cultivation has just commenced, and it is impossible to form an idea as to what the outturn will be.	The total area of the district, as given in the latest Bengal Administration Report, is 3,753 square miles. The outturn is required, not of the crop lately sown, but of that which has been already harvested.
	Porahat ...	660	247	Sugarcane ... Tobacco ...	7	...	16		
	Ghatsilla ...	1,173	624	Sugarcane ... Tobacco ...	62 4	12	12 16		
	District Total	3,779*	1,844*	.....	81	......	......		
	GRAND TOTAL FOR THE WHOLE OF BENGAL ..	1,63,820	84,470	......	......	......	......		

* These figures do not agree with those given by the Collector in the *rabi* forecast, hence the difference in the grand total.
† These figures exclude the area in the Lohardaga district, and in pargana Tori of the district of Palamau.

ADMINISTRATIVE SETTLEMENT REPORT OF THE DIRECTOR OF LAND RECORDS AND AGRICULTURE, BENGAL, FOR THE YEAR ENDING 30TH SEPTEMBER 1891.

REVENUE DEPARTMENT—LAND REVENUE.

Darjeeling, the 15th May 1892.

RESOLUTION—No. 150T—R.

READ—

The Annual Report of the Director of the Department of Land Records and Agriculture, Bengal, for the year ending 30th September 1891.

In September 1891 the Lieutenant-Governor issued orders that in future the Director should furnish two settlement reports in the course of the year, viz., (I) financial, for the period from the 1st April to the 31st March, consisting of a brief, mainly statistical and financial, account of the progress of settlement work, and (II) administrative, for the period from the 1st October to 30th September, containing a full account of the progress of survey and settlement work in the Province. It was laid down that the latter report should ordinarily be due to the Board on the 15th November, and to the Local Government on the 15th December. As the Director was absent on privilege leave until early in November, punctual submission of the first report was not expected, but he was desired to prepare it as soon as possible after his return. Instructions were given in the Government Resolution of the 28th September 1891, on Mr. Finucane's annual report for the financial year 1890-91, with a view to the preparation of the report in the manner required by Government. The present report, which is the first Administrative Settlement Report furnished under the new system, is a great improvement on the reports previously laid before Government. It bears, however, so late a date as the 18th March 1892, and was not forwarded by the Board until the 14th April. The Lieutenant-Governor is aware that Mr. Finucane has been constantly on tour since his return from leave, and it appears that he has been unable to obtain the material required by him from the Deputy Surveyor-General and several of the Settlement Officers. It is anything but satisfactory that the survey reports for Jalpaiguri, the Burdwan Raj khas mahals, Chittagong and Sarail, were not received by Mr. Finucane until the 11th to 30th of January (although they referred to the survey year which ends on 30th September), and that no report was furnished for Orissa. His Honour trusts that, with the appointment of Colonel J. E. Sandeman as Director of Bengal Surveys, all such irregularities will cease. No explanation has been offered for the delay in the local settlement reports. Sir Charles Elliott is willing to make due allowance for the change of system, and he agrees with Mr. Finucane in hoping that, timely notice having been given of what is required, the difficulties lately encountered will disappear, and that the next annual report will be submitted on the prescribed date.

2. Mr. Finucane has followed an intelligent order in dealing consecutively with (1) Government estates and temporarily-settled tracts, which are necessarily the most important settlement operations from a revenue point of view, (2) Wards' estates, and (3) private estates. In accordance with the orders on his last annual report, the Director has placed his account of the Orissa, Chittagong and Jalpaiguri settlements in the forefront of his report. Apart from the special position to be assigned to the Orissa, Chittagong and Jalpaiguri operations, Government also desired that an intelligent geographical order should be adopted both as regards the civil divisions and the districts and estates in those divisions. These instructions appear to have escaped notice, for the order observed has been as follows :—

(1) Government estates.		(2) Wards' estates.		(3) Private estates.	
Division.	District.	Division.	Estate.	Division.	District.
Dacca ...	Backergunge.	Burdwan ...	Burdwan Raj Khas Mahals.	Burdwan ...	Midnapore.
Chittagong	Tippera.			Ditto ...	Birbhum.
Ditto ...	Noakhali.	Bhágalpur	Srinagar-Banaili.	Rajshahi ...	Dubalhati (Rajshahi).
Dacca ...	Dacca.				
Burdwan ...	Midnapore.	Dacca ...	Dakhin Shahbázpur.	Chittagong	Tippera.
Presidency	Nadia.			Bhágalpur	Sonthal Parganas.
		Chittagong	Sarail (Tippera).		
		Orissa ...	Kujong and Kanika.		

It is evident that geographical order has not been carefully or consistently maintained, and the Lieutenant-Governor trusts that it will not be necessary to again repeat his orders on this point. The appendices have been properly totalled as desired by Government.

3. *Orissa.*—The Survey Department, as already mentioned, has furnished no report of its work in Orissa. But it appears that 361 square miles were cadastrally surveyed by the end of September 1890, and 687 square miles between that date and the end of September 1891, total 1,048 square miles. The total expenditure on the survey is stated to have been Rs. 2,19,031, or just Rs. 209 a square mile. This is a considerable increase on the rate, Rs. 165 per square mile, previously reported. It is mentioned that Mr. Patterson, the survey officer, unfortunately overlooked the survey rule which requires *parchas* or jamabandi slips to be given to the raiyats at the time of survey; also the errors and inaccuracies of the khasras prepared by the Survey Department delayed the work of attestation, and even now the records of all the villages measured by Mr. Patterson before last rains have not all been sent in. With regard to these and other matters which have come to his notice, the Lieutenant-Governor thinks it right to put on record his opinion that Mr. Patterson was entirely unfit for the position in which he was placed by the Survey Department, and that a hopeless block would have ensued had that officer not left Orissa, and had Colonel Sandeman not come in to set matters straight. Mr. H. R. Reily was in charge of the settlement since he joined on 16th February 1891 to the end of the year under report. He was assisted by Mr. Walsh, a Civilian of experience, Mr. Ambica Charan Sen, Mr. Tahiruddin Ahmed, and Mr. Baroda Charan Mitra, Statutory Civilians, Babus Hurish Chandra Roy and Chaku Lal Sarkar, besides others who from ill-health or other causes did not remain long in the Department. There were six circles and nine Assistant Settlement Officers in charge of them at different times, who were, it is said, in the field on an average 63 days each. This information would have been more valuable if the time during which they were on duty had also been mentioned. In future the Director should state for each officer the number of days (*a*) on duty, (*b*) on leave, (*c*) on tour. The six circles have lately, *i.e.*, in March 1892, been re-arranged under eight officers. The demarcation work has been transferred to the Survey Department. Up to 30th September the status of 29,190 tenants was determined and their rents recorded, and 138,042 plots were attested over an area of 83,752 acres. Jamabandi slips are now being distributed by the Survey Department, and it is hoped that in future each officer will be able to attest daily many more than 600 plots, which is the standard of work laid down, and to some extent attained, in Chittagong. No rents were settled and no land revenue assessed. Out of the 464 patwáris in Orissa, 277 were trained in survey, but their work is found to be more expensive than that of amins. Arrangements have been made also for the utilization of the kánungos as required. The expenditure on settlement during the portion of the year ending 30th September 1891, during which the work was in progress, was Rs. 45,598.

The survey and settlement of Banki, in Cuttack, were completed before March 1891, at an average cost of 7 annas and 10 pies per acre. The estimate for a non-professional survey and for settlement was Rs. 1,64,411 for the 76,800 acres of the estate; the actual cost of a professional survey has been Rs. 25,097 and of the settlement Rs. 12,598, total Rs. 37,695, the increase of revenue obtained being Rs. 7,974. The final report of the proceedings has not yet been received. The Lieutenant-Governor has already characterised this

delay as very unsatisfactory; a full explanation will be required from the Settlement Officer.

4. *Chittagong.*—Mr. Slack was in charge of the operations till the 11th of July, and Mr. C. G. H. Allen for the rest of the year under report. They were assisted by Mr. Atul Krishna Rai (for one month only), Babu Durga Charan Ghose, Babu Romesh Chunder Das, as Assistant Settlement Officers. The demarcation of the Sadar sub-division was completed with the exception of the hilly portions, the work done comprising 465 villages. The cadastral survey of 380 square miles had been accomplished by September 1890, and during the season under report 348 square miles were done, besides 112 square miles of topographical work. After September 1891 534 square miles of cadastral and 252 of new topographical survey remained, besides some important traverse work. Arrangements have been made to accelerate the rate of progress. Since the 1st January 1891 the work of preparing the records required for attestation in the Sadar sub-division has been made over to the Settlement Department. The records of 212 villages with an area of 205 square miles were handed over for settlement work. The Khanapuri of 477,682 plots was completed, and the entries regarding 306,463 plots were revised. In the Sadar sub-division the status of 33,679 tenants was determined and their existing rents were recorded. No fair-rent decisions were passed, and no land revenue was assessed. A scheme has been sanctioned for strengthening and utilising the khas tahsil establishment for the maintenance of the records.

In Old Thána Ramu the survey had been completed by September 1890. The settlement work was mainly conducted by Babu Jogendra Kumar Bose, who completed the attestation, dealing with the lands of 15,389 tenants, disposed of 558 original suits and 1,062 objections, and passed eight fair-rent decisions. Fair-rent decisions have been passed in 43 of the 50 villages in Ramu. Soil class maps are now in preparation and statements of the revenue assessable on the average soil class rates are being drawn up. The settlement expenditure amounted, during the year, to Rs. 58,892 in the Sadar and Rs. 15,389 in Ramu, the cost of the survey being Rs. 1,32,540 in the Sadar sub-division. A reasonable standard of work expected from each amín and Assistant Settlement Officer has been drawn up in Chittagong, but from the monthly progress reports received, His Honour has reason to fear that the standard required is not attained.

5. *Jalpaiguri.*—By the end of the year under report 765 square miles had been cadastrally surveyed, being practically the whole of the area under settlement. Besides this 174 miles of forest and 61 of waste lands had been surveyed, leaving 290 of forest and 340 of waste lands for the survey work of the current year. The records of 3,430 jotes were made over to the Settlement Officer. An area of 162,063 acres in 3,507 jotes in the Mainaguri tahsil was assessed during the year, giving an increase of Rs. 36,210 revenue, but the revised assessment has not been finally passed by the Commissioner. Mr. Sunder was in charge throughout the year, and was on tour for 217 days. He records the constant struggles of his subordinates with fever; he has at different times had five assistants, but the climate of the Duars has necessitated several changes among them. The three men last appointed have been employed in pargana Moraghat in collecting information preparatory to the settlement of the rates on jotes in the Falakata tahsil. It is unsatisfactory to find that some of the later records of the Survey Department were so carelessly prepared that they had to be returned for revision. The increase of revenue, amounting to Rs. 60,000, expected in the Mainaguri tahsil, is chiefly due to the extension of cultivation on nearly every jote, to the recovery of the amount which was remitted seven years ago under the reduction scheme then advocated and apparently sanctioned under misapprehension, and to the application of the rates approved for this settlement. Considerable delay has been caused by the necessity of requiring the people to record the mutations of ownership and to pay the fees due on this account. The cost of the survey during the year is separately stated to have been Rs. 1,03,658 or Rs. 1,10,784. Such discrepancies should be cleared up before this annual report is laid before Government. The expenditure on settlement was Rs. 30,459.

6. The work done in the settlement operations in progress, other than the important proceedings mentioned in the preceding paragraphs, has been sufficiently summarized in the Director's report, to which reference may be made. As the details have been reviewed for the financial year 1890-91, it is

not necessary, especially at this late date, to review them again. A very few observations only are now required. In future the Administrative Settlement Report for the year ending 30th September will be the main report of the year, and the principal comments of Government will be reserved for the Resolution on it. The Srinagar-Banaili settlement, which has been completed, will shortly come under separate review. The Lieutenant-Governor understands that the dispute as to the standard of measurement in pargana Akberabad in the Malda district has been settled *ex parte*. In Backergunge there were 27 Government estates under settlement under the Tenancy Act, and up to the close of the year under report the proceedings had cost Rs. 30,015. The Director does not mention the enhanced revenue to be set against this expenditure, but from the statements furnished by the Collector of Backergunge it appears that an increase of revenue to the amount of Rs. 5,639 has already been obtained from seven of the villages, *i.e.*, estates, and that a total increase of Rs. 25,114 is expected from the 27 estates. An explanation has been given of the discrepancies noticed in paragraph 11 of the Government Resolution of the 28th September 1891 in the number of estates under settlement. It is a matter for satisfaction that the compromise accepted by the Manager and the raiyats in Sujamutha has been worked out and brought into effect. The Lieutenant-Governor concurs with the Director that the number of days spent on tour by the Settlement Officer, Dwijendra Lall Roy, viz. 65, in spite of the orders repeatedly given to him to go into every village and dispose of objections on the spot, was utterly inadequate. The Manager of the Burdwan Raj will be informed of the want of co-operation on the part of the Raj officials which has entailed delay and extra expense.

7. The total area of Government estates and temporarily-settled tracts under survey and settlement during the year was 9,090 square miles, of which 2,381 miles had been surveyed prior to, and 1,397 miles were surveyed during, the year under report, total 3,778 square miles; the total expenditure on survey and settlement from the beginning of the operations to the end of the year being Rs. 13,04,875, and the increase of revenue actually obtained being Rs. 1,10,078, or 8·44 per cent. on the outlay. This amount does not represent anything like the increase that will be obtained when the settlement operations are completed in Chittagong, Orissa, and Jalpaiguri, which are expected to yield an increase of revenue, amounting to about eight lakhs of rupees in addition to what has been actually obtained. The total area of wards' estates under settlement is 2,226 square miles, of which 1,945 square miles had been surveyed prior to, and 50 square miles were surveyed during, the year under report, total 1,995 square miles; the increase of rental actually obtained amounted to 6·96 per cent. on the outlay. The total area of private permanently-settled estates under survey and settlement was 815 square miles (inclusive of the Sonthal Parganas estates), the increase of rental obtained being 42·49 per cent. on the outlay.

From a revenue point of view, these results may be considered to be satisfactory. There has nowhere been any serious opposition to the proceedings, nor has any serious dissatisfaction with the results been expressed, on the part of either the landlords or tenants concerned.

8. Sir Charles Elliott agrees with the Board that much labour has been bestowed on the preparation of the Director's report, and that valuable financial results will be obtained from the operations under notice. He has had occasion more than once to state the importance which he attaches to surveys and settlements on administrative and statistical grounds, and his views are corroborated by everything that comes before him, especially in a Province dominated, as Bengal is, by the permanent settlement. The work done by Mr. Finucane in supervising the Settlement Department again merits the acknowledgments of Government.

ORDER—Ordered that the Resolution be published in the *Calcutta Gazette*.

Ordered, also, that a copy of the Resolution be submitted to the Government of India in the Revenue and Agricultural Department for information, and that a copy be forwarded to the Board of Revenue, Lower Provinces, for information and guidance.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 14th May, 1892.

Division	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
BURDWAN DIVN.	1	Burdwan May 14, '92 Kalna ... Katwa ... Raniganj ...	0·98 1·24 0·12 Nil	Weather—hot and cloudy. More rain wanted for ploughing. Sugarcane and *til* not doing well. Prices slightly rising. Prices of common rice :— Srs. Sadar ... ... 10 to 16 Kalna ... ... 10 to 13¼ Katwa ... ... 12¾ Raniganj ... ... 14 per rupee.
	2	Bankura „ 14, '92 Vishnupur ...	1·45 Nil	Weather—much cooled down by the late rain. Sky still cloudy with high winds in afternoon. Rainfall of the week has facilitated ploughing in parts of the district. General rain is wanted soon. Condition of cattle much affected by insufficient supply of fodder and water. Common rice selling at 14 seers per rupee (average of the kinds of rice used by the lower and middle classes) both at Sadar and Vishnupur market.
	3	Birbhum „ 14, '92 Rampur Hát ...	0·27 1·18	Weather—cloudy with duststorms, but no general rain at all. Fodder and water scarce. Cattle are in normal condition. Prices of rice as in last week, 12 to 15 seers per rupee.
	4	Midnapore „ 14, '92	0·81	Weather—very hot; rain fell four times during the past week. Want of rain retarded ploughing. Indigo doing well. Prices of common rice :— Srs. Sadar ... ... 13 Tamluk ... ... 12 Ghatál ... ... 13 per rupee.
	5	Hooghly „ 14, '92 Serampore ... Jahánabad ...	2·09 0·29 0·91	Weather—hot; cloudy towards evening with sometimes inadequate showers. The necessity for rain continues and increases. The light showers recorded are wholly inadequate. Fodder-supply sufficient. Water-supply defective. Prices of common rice :— Srs. Ch. Sadar ... ... 9 or 10 0 Serampore ... ... 10 0 Jahánabad ... ... 12 12½ per rupee.
	6	Howrah „ 14, '92 Ulubaria ...	0·52 Nil	Weather—hot, with nor'-westers almost every alternate day. Rain wanted. Condition of cattle good. Fodder and water-supply becoming scanty. Rice 10 to 12 seers a rupee.
PRESIDENCY DIVN.	7	24-Parganas „ 14, '92	0·30	Weather—hot. On the 13th a slight thunder-storm followed by some rain. Slight rain throughout the district, but more is wanted everywhere for ploughing. Prospects not improved. Condition of cattle good. Fodder still sufficient, but scarcity of water is felt in several places. Common rice 10 to 12 seers per rupee.
	8	Nadia „ 14, '92 Kushtia ... Meherpur ... Ranaghat ...	1·72 2·49 0·77 1·89	Weather—cloudy with strong wind. Rain during the week has done much good and greatly improved prospects. Sowing of *aus* and jute going on. Common rice selling at 10 seers 10 chitaks to 13 seers 5 chitaks per rupee.
	9	Khulna „ 14, '92 Bágerhat ... Satkhira ...	2·43 2·27 2·10	Weather—hot; stormy in the evening. A fair amount of rain has fallen during the week, and ploughing and sowing of land for *aus* and *áman* progressing vigorously. Rain has improved prospects of *til* and sugarcane in Bágerhat, but more rain wanted. Common rice selling at from 11 to 15 seers per rupee. Fodder sufficient, but some inconvenience is still being felt for drinking water.
	10	Jessore „ 14, '92 Jhenida ... Magura ... Narail ... Bangaon ...	2·15 4·39 1·56 1·85 2·55	Weather—hot and cloudy, with occasional showers. Sowing of *aus*, *áman*, and indigo progressing. Prospects improved by the rain of the week. Sugarcane, *til*, and jute promising. No want of fodder, but drinking water still insufficient. Prices steady.
	11	Murshidabad „ 14, '92	0·82	Weather—hot and cloudy. Sowing of *bhadoi* going on. *Boro* paddy is being harvested. Fodder for cattle obtainable. Coarse rice sells at 11½ seers per rupee.
CHITTAGONG DIVN.	12	Chittagong „ 14, '92	6·74	Weather—hot and unhealthy. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali „ 14, '92	3·47	Weather—seasonable. Sowing of *aus* still continues, and weeding commenced in some places. Prospects favourable. Fodder and water sufficient. No cattle-disease except in Chhagalnaya. Common rice sells at 13 seers per rupee.
	14	Tippera „ 14, '92	4·75	Weather—cloudy, stormy, cool. Sowing of *aus*, *áman*, and jute checked by frequent rain. Prospects satisfactory. Cattle-disease abating. Prices stationary.
	15	Chittagong Hill Tracts. „ 13, '92	4·44	Weather—cloudy, with occasional showers of rain. Sowing of paddy, cotton, vegetables, &c., in the *jums* still continues. The fall of rain renders much aid to the *jum* cultivation. Cattle-disease still prevailing. Common rice selling at 10 seers per rupee.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—concld.				
DACCA DIVN.				
16	Dacca	May 14, '92	1·97	Weather—hot; cloudy with high wind at intervals. Rice and jute being sown. Prospects of standing crops improved by late rain. Fodder available. Condition of cattle good. Common rice selling at from 13 to 16 seers per rupee.
17	Faridpur	„ 14, '92	1·62	Weather—stormy. Sowings almost completed. More rain wanted for high lands. Rice selling at 13½ seers per rupee at Sadar and 13 seers at Goalundo and Madaripur. Cattle in good condition and get ample fodder.
18	Backergunge Pirojpur Patuakhali Bhola	„ 14, '92	4·90 1·69 1·58 3·32	Weather—seasonable. State and prospects of crops fair. Ordinary rice sells at from 9 to 14 seers per rupee. Fodder and water sufficient.
19	Mymensingh	„ 14, '92	6·44	Weather—cool and stormy. State and prospects of crops fair. Too much rain for jute and *aus* crops. Outturn of *boro* expected to be 10 to 12 annas. Common rice is being sold at 13½ seers per rupee. Condition of cattle good. Supply of water and fodder sufficient.
RAJSHAHI DIVN.				
20	Dinajpur Thakurgaon	„ 14, '92 ...	1·58 2·36	Weather—cool and cloudy. No more rain wanted at present. Sugarcane sown to the extent of 16 annas. Standing crops doing pretty well. Price of rice both at Sadar and Thakurgaon continues unchanged; it is falling at Raiganj considerably. Condition of cattle good. Supply of fodder and drinking water sufficient.
21	Rajshahi Nator Nowgong	„ 14, '92	0·96 2·02 0·30	Weather—very hot. More rain badly wanted at Sadar. *Boro* paddy is being reaped with good outturn. *Aus* and *áman* cultivation progressing favourably. Late rain has done immense good. Fodder and water abundant. Very little cattle-disease. Common rice sells at from 10 to 15 seers per rupee.
22	Rangpur Gaibanda Nilphamari Kurigaon Ulipur	„ 14, '92	6·09 7·31 4·61 7·27 8·54	Weather—very cool for the time of year; It continues unsettled. More rain probable. Incessant rain of the past week is likely to cause some damage to crops on low lands. Fine weather wanted. Price of common rice 11 to 13 seers per rupee.
23	Bogra Sherpur Naukhila	„ 14, '92	0·32 1·77 1·73	Weather—cloudy and cool with occasional storms. State and prospects of crops good. *Aus* and jute coming on well. Fine weather required to assist weeding. Price of common rice stationary at 13½ seers per rupee.
24	Pabna	„ 14, '92	1·51	Weather—cool in the morning; hot in the afternoon, when it is also cloudy. The late heavy downpours have greatly improved agricultural prospects. Common rice selling at 13 seers per rupee. Fodder and water-supply sufficient except in Dulai. Condition of cattle good.
25	Darjeeling	„ 14, 92	3·63	Weather—fair with occasional breaks. Rain during this and previous weeks has improved prospects of crops already sown. *Bhadoi, bhutta, chhota marua, fafur* and potatoes progressing favourably. Wheat and barley being harvested. Fodder and water-supply sufficient. Some cases of cattle-disease in the hills.
26	Jalpaiguri	„ 14, '92	3·06	Weather—cool and cloudy. Rain throughout the week. Sowing of *bhadoi* and jute nearly completed. Fair weather required for weeding. Price of common rice stationary. No want of fodder and water-supply. Condition of cattle generally good.
BIHÁR.				
BHÁGALPUR DIVN.				
27	Monghyr Begusarai Jamui	„ 14, '92	Nil Nil Nil	Weather—hot by day with cool east breeze at night. Sugarcane and rice, also *cheena, kheri* and *sama* on the ground doing well. Ploughing in progress. Rain urgently wanted for *bhadoi* sowing. Condition of cattle good. Fodder sufficient. Water getting scarcer and scarcer.
28	Bhágalpur Banka Madhipura Supaul	„ 14, '92	Nil 0·10 0·32 0·29	Weather—cooler with strong east winds; mornings generally cloudy. Heavy rain urgently wanted. The light falls in the north have benefited the rice on low lands, but have not been enough for the rice and *marua* already sown on high lands. Sugarcane and indigo doing very fairly. Fodder sufficient, but water is low. Cattle are generally healthy. Common rice 11 seers 6 chitaks per rupee.
29	Purnea Kishanganj Araria	„ 14, '92	1·72 1·91 1·18	Weather—cloudy with one or two showers. Strong east winds. Sowing of *bhadoi* and jute nearly complete. Sowing of *aghani* continues. Harvesting of *kauni* and *cheena* commenced. Crops on ground doing well. Fodder and water ample. No cattle-disease. Prices of common rice:— Srs. Sadar ... ... 10 to 12½ } per rupee. Kishanganj ... ... 11 } per rupee. Araria ... ... 13 } per rupee.
30	Malda Chanchal	„ 14, '92 ...	0·01 0·65	Weather—very hot; latter part of the week cloudy, but no rain. Harvesting of *boro* paddy progressing; average estimated outturn not less than 12 annas. Seedlings of *bhadoi* rice are growing. Cow-pox reported from old Malda thana. Ordinary rice selling at from 11 to 13 seers a rupee. Supply of fodder ample.
13	Sonthal Parganas Deoghur Godda Jamtara Pakaur Rajmahal	„ 14, 92	0·51 0·05 0·47 0·39 0·35 0·12	Weather—very hot and sultry; winds easterly; occasional local storms; promises more rain. Sugarcane in need of rain. *Boro paddy* being gathered in Rajmahal. Ploughing has begun. Price of rice varies from 10 to 13 seers per rupee. Fodder and water-supply becoming scarce.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHÁR—*concld.*				
PATNA DIVISION. 32	Patna	May 14, '92	Nil	Weather—hot; cool in the latter part of the night. Lands being prepared for *bhadoi* crops, and *cheena* being sown in diára lands. *Boro* rice being harvested in Barh subdivision. Irrigation of *cheena* and sugarcane going on. Common rice selling at 12 seers per rupee.
33	Gaya Jahánabad Nawáda Aurangabad	" 14, '92	Nil Nil Nil Nil	Weather—very hot, with variable winds. Sugarcane and *cheena* millet doing fairly well; *cheena* has begun to be gathered. Prices of food-grains rising slowly. Supply of fodder and water very scanty. Condition of cattle bad in Aurangabad.
34	Shahabad Buxar Bhabhua Sasarám	" 14, '92	Nil Nil Nil Nil	Weather—unseasonably cool. Prevailing winds are from the east. Sky cloudy, and rain appears to be not unlikely. Millet crop is an unusually good one, and it has been largely sown where water is available, *i.e.*, where there are village wells on the tract irrigated from the Durgaoti embankment. *Boro* paddy sown on the banks of *bils* and rivers is being cut and gives good result. *Mahua* crop in the south is heavy. Price of wheat rising owing to exportation.
35	Darbhanga Madhbani	" 14, '92 ...	0·03 0·22	Weather—cloudy and high east wind. Rain very much wanted for preparation of lands for *bhadoi* sowings. Early rice on low lands and *mung* coming on well where there has been rain. Prices almost stationary. Water becoming very scarce, but fodder still sufficient.
36	Muzaffarpur Hajipur Sitamarhi	" 14, '92	Nil Nil 0·55 (on 11th May.)	Weather—hot and close with east wind. The further rainfall of ·55 inch in northern half of Sitamarhi subdivision has been of continued benefit; elsewhere rain still much wanted, and water-supply becoming scanty. *Cheena* being cut in places Prices fairly stationary since last report. Rice being imported from Motihari in considerable quantities.
37	Saran	" 14, '92	Nil	Weather—hot and seasonable. Rain much wanted for indigo and *cheena*. Water and fodder still sufficient. Prices of common rice:— Srs. Ch. Chapra ... ... 11 5 } Siwán ... ... 12 4 } per rupee. Gopalganj ... ... 12 5 }
38	Champaran Bettiah	" 14, '92 ...	0·20 0·04	Weather—hot. Cultivation is going on for *bhadoi* and *aghani* crops. Rain wanted for *marua* and *kodoa*. Paddy and other crops already sown have been to some extent benefited by the recent rain. Exportation still continues. Common rice is being sold at from 11 to 12 seers per rupee in the Sadar and 13 seers in Bettiah.
ORISSA.				
ORISSA DIVN. 39	Cuttack	" 14, '92	Nil	Weather—sultry and hot. Rain much wanted. Agricultural operations retarded for want of it. Fodder and water-supply scanty in places. Price of common rice 11 to 17 seers per rupee.
40	Puri	" 12, '92	Nil	Weather—seasonable. Rain wanted. *Dalua* being harvested. Miscellaneous crops good. Rice sells at from 12 to 15 seers per rupee.
41	Balasore	" 14, '92	0·25	Weather—very hot. A few small local showers, but water-supply becoming very scanty and cultivation very backward. Rice sells at 14 seers per rupee.
CHOTA NAGPUR.				
South-West Frontier Agency.				
CHOTA NAGPUR DIVN. 42	Hazáribágh Giridi	May 14, '92 ...	Nil Nil	Weather—intensely hot. Mango yielding moderately. Common rice selling at from 11 to 13 seers per rupee. Fodder and water scarce in many places
43	Lohardaga	" 14, '92	Nil	Weather—very hot. Rain badly wanted. Common rice selling at 13 seers per rupee. Fodder and water insufficient.
44	Palámau	" 13, '92	Nil	Weather—extremely hot and misty. Sky clouded up for a day or two. Sugarcane, the only crop on the ground, doing well. Want of rain badly felt. Common rice 13 to 14 seers per rupee. Supply of water and fodder very scanty.
45	Singhbhum	" 14, '92	Nil	Weather—very hot. No sign of rain. Mangoes coming into the market; a short crop expected owing to the very hot and dry weather. Price of rice stationary. Both water and fodder becoming scarce.
46	Manbhum Gobindpur	" 14, '92 ...	Nil 0·67	Rain has fallen in district, but not heavy enough. The drought has materially affected the young sugarcane. Outturn of *kusumi* lac 10 annas. Rice selling at from 12 to 16 seers per rupee. Fodder and water-supply scanty.

Published for general information.

* Mean of 5 days. | † Mean of 6 days.

[Ex]planation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ... The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the ... in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 14th of May 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Of week. Normal mean. Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 17*th May* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 14TH OF MAY 1892.

THE meteorological conditions in Bengal at the close of the previous week were distinctly disturbed, and local storms with rain were occurring in Assam and in East and North and part of Central Bengal. The meteorological changes which took place from the 7th to the 8th instant, or the first day of the present week, rather increased the disturbance, for pressure fell moderately to rapidly over the whole province, the fall being largest at the western stations, and a very shallow low-pressure area may be said to have existed over part of Bihár and Western Bengal on this day. On the morning of the 8th, therefore, the majority of stations, except those in Bihár and Chota Nagpur and parts of Orissa, reported moderate to heavy rain which had fallen during local storms. Conditions remained practically unaltered on the 9th and 10th, and pressure continued unusually low over the whole province; but on the 11th and 12th the changes of pressure became small, though it continued to fall over the whole province, and it became generally from a sixth to an eighth of an inch below the normal of the day. A reaction then set in, and pressure rose rapidly on the 13th, the rise in the north of the province being very large, and at Purnea equalling 0·153". The changes in different districts were, however, of very unequal amount, showing that the atmosphere was still in a very disturbed state. A further small rise took place over a considerable part of the province on the 14th, and though pressure still remained slightly to moderately below the normal, yet the general conditions became gradually more settled than they had been. Hence from the beginning of the week up to about the 13th local storms with rain were rather numerous in all districts except in Orissa, Bihar, and Chota Nagpur, and on the evening of the 13th, in particular, some very heavy local storms took place which gave heavy rain over parts of South Bengal ; but from the 14th, or the last day of the week, the number of local storms became considerably smaller than they had been previously.

Another noticeable feature in the meteorology of the week has been the setting in of decidedly strong winds in the extreme south of the Bay at the Ceylon stations, and it was evident that from about the 10th instant, an advance of strong south-westerly monsoon winds was taking place over this area.

Pressure.—The mean pressure for the week has been rather largely in defect of the normal. Defects of about a tenth of an inch and upwards have been registered at Motihari, Dehri, Buxar, Gaya, Bankipore, Bankura, Raniganj, and Berhampore; but generally the defects have been rather smaller than this, and range from 0·06" to 0·08". The mean defect for the whole province will, however, average about 0·09".

Temperature.—Has again been rather largely in excess of the normal over a considerable part of the province. The excess has equalled the unusually large amount of 9·2° at the Chota Nagpur stations; in South Bihár it has equalled nearly five and-a-half degrees, and in Orissa and North-West Bengal it has been between 4° and 5°. On the other hand, owing to the rather plentiful rainfall in East and North Bengal, the mean temperatures there have been below the normal by small amounts. For the whole of Bengal the mean temperature for the week has been 3·2° in excess of the normal. In Assam, on the other hand, there has been a defect of 2·1.°

Rainfall.—An average amount of more than four inches of rain has fallen in East Bengal, which is about two and-a-half inches in excess of the normal. North Bengal has received nearly three inches of rain, or about an inch and-a-half more than the normal. South-West Bengal has received an inch and-a-third, or nearly half an inch in excess, while in North Bihár the fall is about four-tenths of an inch, or slightly below the normal fall. Over the remainder of the province rainfall has been practically absent.

These falls have, however, been unequally distributed, and notwithstanding the large excess generally shown in East and North Bengal, the districts of Noakhali, Rajshahi, and Malda have received comparatively small amounts of rain, and while South-West Bengal generally has had good rain, Bankura and parts of Birbhum have had practically no rain. In North Bihár also the districts which have received practically little or no rain are Muzaffarpur, Darbhanga, Champaran, and Saran.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 14th of May 1892:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1892.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; p, passing temporary showers; t, thunder; <, lightning.

J. H. GILLILAND,

RESOLUTION REVIEWING THE REPORT ON THE LUNATIC ASYLUMS IN BENGAL FOR THE YEAR 1891.

MUNICIPAL DEPARTMENT—MEDICAL—No. 93T—M.

Darjeeling, the 20th May 1892.

RESOLUTION.

READ—

The Report on the Lunatic Asylums in Bengal for the year 1891.

Read again—

The Report for the year 1890, and the Resolution recorded upon it.

The present report, which has been submitted with admirable punctuality, shows the statistics of the asylums in the forms hitherto in use, which cannot be altered without the concurrence of the Government of India, but it adds to these the provincial totals and the modified statement relating to sickness and death, which were suggested in the Resolution on last year's report.

2. The population of the five native asylums on 1st January 1891 was 1,021, the admissions and re-admissions during the year amounted to 213; 149 persons were discharged cured and 42 otherwise, and 80 persons died. The number of persons under detention at the close of the year was 963, or 58 less than at the close of the preceding year. The larger portion of the decrease is

among the non-criminal lunatics, the decrease in this class being 42 as compared with a decrease of 16 in the class of criminal lunatics. The increase in the number of discharges, which amount to 191 as compared with 117 in 1890, is remarkable, and its cause a little obscure; but it is satisfactory to observe that it has occurred chiefly in the class "Cured." The number of admissions was 197, or only two less than in the previous year. It is hoped, however, that in future this number will be reduced when the instructions issued by Government in Circular No. 42, dated 3rd December 1891, regarding the admission of non-criminal lunatics, begin to take effect.

3. The decrease of 16 in the criminal population of the asylums is ascribed by Dr. Hilson to more vigorous supervision on the part of the visitors. It is not apparent, however, how this more vigorous supervision has been exercised. The admissions in this class, which amounted to 80 against 88 in 1890, do not seem to have been affected by the orders of Government prescribing greater caution in the admission of lunatics, as these orders have scarcely had time to begin to operate. Nor can the increase in the number of discharges, from 50 in 1890 to 83 in 1891, have been due to those orders, but it must probably be attributed to the effect of the rules laid down by the Committee in 1888, which are only now coming into full operation.

4. During the year under review, all the asylums were remeasured with the result that there is now found to be accommodation for 1,069 patients, calculated at 50 superficial feet for each patient. Dr. Hilson's surmise that the capacity of the asylums had been under-estimated is thus proved correct, and there is really accommodation for 50 more patients as compared with the capacity shown in the year 1890. This capacity too will be largely increased when the new buildings at Berhampore are completed. Some slight overcrowding, which occurred during the year in the Berhampore and Dacca Asylums, was relieved by making suitable temporary arrangements, so that but little inconvenience was felt.

5. The admissions into hospital were 717 as compared with 715 in the previous year. There were 3 cases of chicken-pox at Dacca, 1 case of cholera at Patna, 28 cases of influenza at Dacca, and 39 cases at Berhampore. It is remarkable that at Berhampore influenza was confined to females, while in the previous year males only suffered. There were 80 deaths as against 69 in 1890. Of these 1 was due to cholera, 17 to diarrhœa and dysentery, 10 to general debility and old age, 18 to tubercle of the lungs, 7 to pneumonia, 4 to anæmia, 6 to apoplexy and hemiplegia, 1 to paralysis, 2 to cirrhosis of the liver, 3 to exhaustion of mania, and the rest to other scattered causes. A comparison is suggested in the report between the sickness and mortality in jails and in the asylums, but such a comparison cannot be fairly made, since the population of a jail is mostly healthy, while that of a lunatic asylum is generally diseased. The rate of mortality ruling in the Bengal asylums may more properly be compared with that recorded in the asylums of other provinces of India, and with the death-rate of asylums in Europe. Taking the latter figures first, it will be found that while the mortality in jails in England is considerably lower than in Bengal, the reverse appears to hold good in the case of lunatic asylums. In 1890, for example, the death-rate in the Bengal asylums was 6·94 per cent., and during the past year it rose to 8·02. But the latter rate compares favourably with the 10 per cent. recorded in England, while French asylums show 15 and Austrian 12 per cent. Even in Belgium, where special attention has been paid to the treatment of lunatics, the mortality in public asylums and families taken together amounts to 8·8 per cent. A comparison with the death-rates of other provinces in India cannot be made for 1891, as the reports are not yet available. But in 1890 the Madras asylums had a death-rate of 18·4 per cent., Bombay showed 11, the Panjab 9·53, and the North-Western Provinces 9; while the rate for the Bengal asylums was only 6·94. These results may be considered satisfactory, and indicate that the health of the inmates of asylums is carefully looked after by the Superintendents. The whole subject of asylum mortality is, however, dealt with rather briefly in the report, and the Lieutenant-Governor would wish it in future to be treated at greater length.

6. The record of injuries, accidents and escapes compares favourably with that of last year, but is still too full. At Dalanda there were three trivial acci-

dents; at Dácca there were three accidents and six injuries, two of which were apparently due to violent treatment of the patients by their keepers. An account is given in the report of one of these cases and of the punishment inflicted on the culprits; the Lieutenant-Governor trusts that sufficiently severe notice was also taken of the other case. At Patna and Berhampore there were two accidents each, and at Cuttack there was one case of suicidal hanging. At Dacca there were two escapes, both the lunatics being recaptured.

7. The figures of income and expenditure are clearly shown in the statement in the body of the report. The details are as follow:—

GRAND TOTAL ...	....	.....	....	.....	90,374 15 4	94,780 12 1

Excluding the last three items and the manufacture charges, which are balanced by the receipts, the real expenditure, it is observed, increased by about Rs. 1,000, chiefly due to arrear and new taxes, and to the payment of water-rate at Dacca. The total amount expended on diet shows a decrease of Rs. 1,482-0-2. The average cost of each lunatic on account of diet was—Dalanda Rs. 37-14-1, Dacca Rs. 36-13-2, Patna Rs. 31-10 0, Cuttack Rs. 27-15-1, and Berhampore Rs. 33 3-5. The cost of rations per head of average strength in the neighbouring jails was—Alipore Rs. 26-3-0, Dacca Rs. 22-6-0, Patna Rs. 19-15-0, Cuttack Rs. 20-2-0, and Berhampore Rs. 24-14-0. The comparison is useful as indicating the possibility of managing with greater economy, but it must be remembered that the dieting of lunatics cannot be reduced to the same standard of cheapness as the dieting of convicts. The latter are for the most part in good health; the former are, with few exceptions, more or less sickly, and are apt to give trouble about their food; there is more waste, and the arrangements for feeding cannot be carried out on so large a scale as in the jails. Calculated on the actual expenditure shown in the first nine items of the statement given above, the average total cost of a patient in 1891 was Rs. 65-15-7, against Rs. 64-6-6 in 1890.

8. The population of the Bhawánipur European Asylum at the commencement of the year was 34, against 33 in 1890. Fifteen persons were admitted and one re-admitted during the year. Three of the admissions were criminal lunatics, none being serious cases. During the year three persons were discharged cured, one was despatched to Europe under the Merchant Shipping Act, one was transferred to the care of friends, two were made over to the Military authorities, one was despatched to Europe as still insane, and seven died. The

number of patients under detention at the close of the year was 35. There was no want of accommodation either in the male or the female wards: the overcrowding among females which occurred last year was relieved by adding an upper storey to the female ward. There were no injuries, accidents or escapes during the year. The general health of the patients was good. The total expenditure for the year was Rs. 25,370 as against Rs. 20,583 in 1890, the increase of Rs. 4,787, which was unavoidable and partly non-recurrent, being due to the construction of the upper storey and to the payment of rates and taxes for the first time. The question of closing this asylum altogether, and transferring the patients to the Dalanda block of buildings, is now under consideration, and has been referred to a special Committee.

9. The thanks of the Lieutenant-Governor are due to Dr. Hilson for this report. His Honour is glad to observe the favourable terms in which Dr. Hilson acknowledges the efficiency of the Superintendents and their subordinates.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

REPORT ON THE STATE OF THE SALT MARKET FOR THE FOURTH QUARTER OF 1891-92.

No. 375B, dated Calcutta, the 13th May 1892.

From—T. Inglis, Esq., Offg. Secretary to the Board of Revenue, L.P.,
To—The Secretary to the Government of Bengal, Financial Department.

Salt.
C. C. Stevens, Esq.

I am directed by the Board of Revenue to submit the following report on the state of the salt market for the fourth quarter of 1891-92, comprising the months of January, February and March 1892.

2. The quantity of salt of every description cleared during the quarter under report amounted to 22,12,558 maunds 29 seers 13 chittacks, against 24,29,085 maunds 23 seers 12 chittacks in the previous quarter, and 22,65,538 maunds 34 seers 12 chittacks in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 51,96,684-6, against Rs. 56,68,108-12 in the previous quarter and Rs. 52,74,742-6 in the corresponding quarter of the previous year.

3. The quantity of excise salt sold in Orissa during the quarter under review, and the quantity which remained in store at the close of the quarter, are shown in table I:—

4. The total sale of excise salt during the quarter under review amounted to 4,073 maunds, against 3,439 maunds in the previous quarter and 23,232 maunds in the corresponding quarter of the previous year. The total amount of excise salt cleared, *i.e.*, on which duty was paid during the quarter, was 5,703 maunds. The figures in the table shown in the last paragraph are for the salt removed from the golahs.

5. The subjoined table shows in comparison the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter under review and the corresponding quarters of the previous two years :—

No transactions in sea-imported salt have been reported for the quarter from the ports of Cuttack, Puri, and Balasore.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 21st May, 1892.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
BURDWAN DIVN.				
1	Burdwan Kalna Katwa Raniganj	May 21, '92	0·34 0·10 0·45 Nil	Weather—very warm. The slight rain is insufficient to do any good. Sufficient fodder for cattle. Water scarce in parts. Prices of common rice :— Srs. Sadar ... ... 13 to 16 Kalna ... ... 9 to 13 Katwa ... ... 12$\frac{1}{16}$ Raniganj ... ... 14 per rupee.
2	Bankura	„ 21, '92	Nil	Weather—very hot and cloudy at nights. Ploughing of fields begun. Rain wanted everywhere. Health of cattle not good owing to insufficient supply of fodder and water. Common rice is selling at 13$\frac{3}{4}$ seers per rupee at Bankura and 14 seers at Vishnupur (average price of the kinds of rice used by the lower and middle classes).
3	Birbhum Rampur Hát	„ 21, '92 ...	Nil 0·69	The heat is great and distressing. Fodder and water scarce. Cattle look thin. Rain in the north has lowered prices there very slightly, while they have risen elsewhere. Price of rice in Rampur Hát subdivision 12½ to 16 seers per rupee; elsewhere 12 to 14½ seers.
4	Midnapore	„ 21, '92	0·46	A little rain has fallen during the week. There is a breeze in the evening which lessens the intense heat. Indigo doing well. Rain wanted. Fodder scarce. Prices of common rice :— Srs. Sadar ... ... 13 Contai ... ... 12 Tamluk ... ... 12 Ghatál ... ... 13 per rupee.
5	Hooghly Serampore Jahánabad	„ 21, '92	Nil 0·07 0·59	No crops on the ground except sugarcane, which is suffering from want of rain. Land is being prepared for *aus*. Sowing will commence when heavy rain falls. Fodder-supply sufficient. Water-supply defective. Prices of common rice :— Srs. Ch. Sadar ... ... 10 0 Serampore ... ... 10 0 Jahánabad ... ... 12 12¼ per rupee.
6	Howrah Ulubaria	„ 21, '92 ...	Nil 0·41	Weather—hot and close. More rain wanted. Paddy sowing commenced. Condition of cattle good. Fodder and water-supply becoming inadequate in the south of the district. Price of rice 10 to 12 seers per rupee.
PRESIDENCY DIVN.				
7	24-Parganas	„ 21, '92	Nil	Weather—very hot; stormy in the evening; cool in the latter part of the night. Rain much wanted. Agricultural operations retarded for want of it. Fodder still sufficient, but water-supply becoming scanty. Cultivation backward. Condition of cattle good. Prices remain unchanged.
8	Nadia Kushtia Meherpur Ranaghat	„ 21, '92	0·30 2·00 0·43 0·88	Weather—hot and cloudy. *Aus*, sugarcane, and indigo doing well. More rain wanted, especially in the Meherpur subdivision. Coarse rice selling at from 10 seers 10 chitaks to 13 seers 5 chitaks per rupee. No cattle-disease.
9	Khulna Bágerhat Satkhira	„ 21, '92	0·03 1·82 0·72	Weather—hot. Clouds gathering at the end of the week. Cultivation of land for *aus* and *áman* going on, and sowing commenced. More rain wanted. Prospects of *til* and sugarcane favourable in Bágerhat. Common rice selling at from 11 to 14 seers per rupee. Fodder sufficient, but want of water for men and cattle still being felt.
10	Jessore Jhenida Magura Narail Bangaon	„ 21, '92	2·06 0·88 1·16 0·53 0·50	Weather—hot. Sowing of *aus* and indigo has advanced, that of *áman* has commenced, and that of jute progressing. Prospects fair. Prices steady. Fodder and drinking water available.
11	Murshidabad	...		Report not received.
CHITTAGONG DIVN.				
12	Chittagong	„ 21, '92	Nil	Weather—seasonable. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
13	Noakhali	„ 21, '92	Nil	Weather—close and sultry. Prospects of standing crops favourable. Fodder and water available. No cattle-disease. Prices stationary.
14	Tippera	„ 21, '92	0·77	Weather—hot and cloudy. *Til* and chillies are being gathered; outturn above average. Sowing of *aus* and *áman* nearly finished. Prospect good. Prices stationary.
15	Chittagong Hill Tracts.	„ 19, '92	Nil	Weather—seasonably hot. Sowing of paddy, cotton and other hill-produce in *jums* still continues; and the *jum*-produce is progressing. Mangoes and jacks are selling in the bazar. Cattle-disease reported. Common rice selling at 10 seers per rupee.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*				
DACCA DIVN.				
16	Dacca	May 21, '92	0·38	Weather—hot and cloudy. Sowing of jute and paddy nearly finished. *Áman, áus,* and jute plants thriving. Fodder available. No cattle-disease. Common rice selling at from 12 to 16 seers per rupee.
17	Faridpur	„ 21, '92	1·16	Weather—very hot all the week; a little cooler to-day (21st). Prospects of crops good at present. Rice selling at 13½ seers per rupee in the Sadar and at 13 seers at Goalundo and Madaripur. Condition of cattle good, and they got fodder.
18	Backergunge	„ 21, '92	0·11	Weather—hot and cloudy in the morning. State and prospects of crops fair. Ordinary rice sells at from 10 to 13 seers per rupee. Fodder and water sufficient.
	Bhola	...	1·63	
	Patuakhali	...	1·53	
	Pirojpur	...	1·63	
19	Mymensingh	„ 21, '92	2·40	Weather—cloudy and rainy. Prospects of standing crops fair. Too much rain for *aus* and jute. Common rice sells at 13½ seers per rupee. Supply of water and fodder sufficient.
RAJSHAHI DIVN.				
20	Dinajpur	„ 21, '92	1·90	Weather—cool and rainy with occasional breaks. Weeding of *bhadoi* and jute in progress. Prospects of these crops as well as sugarcane are favourable. Sowings of *bhadoi* much larger than usual. Price of rice at Sadar stationary. Condition of cattle good. Supply of fodder and drinking water continue sufficient.
21	Rajshahi	„ 21, '92	0·71	Weather—cooler, but still seasonable. *Aus, áman,* jute and sugarcane are all doing well. More rain seems to be coming. *Boro* rice will give a good outturn. Only a few cases of small-pox among cattle; fodder and drinking water sufficient. Price of rice varies from 11 to 15 seers per rupee throughout the district.
	Nator	..	2·86	
	Nowgong	...	0·96	
22	Rangpur	„ 21, '92	5·45	Weather—rainy and cool. Prospects of *aus* favourable. Fine weather required for weeding. Price of common rice 11 to 14 seers per rupee.
	Gaibanda	...	0·55	
	Nilphamari	...	1·35	
	Kurigaon	...	3·20	
	Ulipur	..	2·38	
23	Bogra	„ 21, '92	1·70	Weather—hot with some heavy storms from 14th to 18th; then cooler and more cloudy with more constant rain from 19th to 21st. All standing crops in excellent condition. Price of rice stationary at 13½ seers per rupee. Large export of rice from western thánas continues.
	Sherpur	...	0·63	
	Naukhila	...	1·99	
24	Pabna	„ 21, 92	2·29	Weather—cool in the morning, cloudy in the afternoon. Heavy showers have improved prospects of standing crops. Weeding going on. Common rice selling at 13 seers per rupee. Fodder and water-supply sufficient except at Dulai. Condition of cattle good.
25	Darjeeling	„ 21, 92	5·14	Weather—extraordinarily rainy for the season. *Bhadoi* paddy and jute sowings completed; *aghani* being sown. *Makai* doing very well. *Chhota marua* progressing favourably. Fodder and water-supply sufficient. No cattle-disease.
26	Jalpaiguri	„ 21, '92	14·10	Weather—cool and cloudy. Heavy rain during the week has done some injury to the jute and *bhadoi* seedlings. Fair weather wanted for a fortnight at least for weeding. Price of rice unchanged. No cattle-disease reported. Fodder sufficient.
BIHÁR. *BHÁGALPUR DIVN.*				
27	Monghyr	„ 21, '92	Nil	Weather—strong east wind during the night; cloudy mornings; cooler by day at the end of the week. Ploughing for *bhadoi* sowings completed. Rain urgently needed for sowings. Advances for buying seed-grain made in Bakhtiarpur. Condition of cattle good. Fodder reported scarce in two thánas; water scarce also.
	Begusarai	...	Nil	
	Jamui	...	Nil	
28	Bhágalpur	„ 21, '92	Nil	Weather—hot with strong easterly wind. Rain much wanted, and sowings generally retarded. Crops already sown not suffering much except on high grounds in the north. Cattle doing fairly well, and fodder sufficient. Locusts reported from Banka. Common rice 11 seers 6 chitaks per rupee.
	Banka	...	Nil	
	Madhipura	...	Nil	
	Supaul *	...	Figures not given.	
29	Purnea	„ 21, '92	0·01	Weather—cloudy; cool in the morning, but warm during the day. Strong east winds. Slight showers at subdivisions. Sowing of *bhadoi* paddy and jute nearly finished. *Aghani* sowings in progress. *Kauni* and *cheena* being harvested; in Araria the outturn is estimated at 16 annas. Sugarcane doing well. Other crops progressing. Fodder and water sufficient. No cattle-disease. Prices of coarse rice :— Srs. Sadar ... ... 11 to 13 } per rupee. Kishanganj ... ... 11 } Araria ... ... 12 to 13 }
	Kishanganj	...	0·21	
	Araria	...	0·12	
30	Malda	„ 21, '92	0·06	Weather—hot; cloudy with high east wind. Latter part of the week cool, and promises rain which is much wanted in thána Kaliachuk. Sowing of *bhadoi* going on. *Boro* paddy is being harvested; average outturn is estimated not less than 12 annas. Yield of mango 8 annas. Supply of fodder ample. Ordinary rice selling at from 11 to 13 seers per rupee. Cow-pox reported from thánas Sadar and Malda.
	Shibganj	...	0·64	
	Gajol	...	0·10	
13	Sonthal Parganas	„ 21, 92	Nil	Weather—sultry with easterly winds; cloudy and threatening, but rain holds off; west wind in Jamtara. Rain urgently wanted. Sugarcane, the only crop on the ground, suffering seriously from drought. Mangoes damaged by violent winds. Cultivation at a standstill for want of rain. Fodder and water-supply failing from same cause. Price of rice ranges from 10 to 13 seers per rupee.
	Deoghur	...	Nil	
	Godda	...	Nil	
	Jamtara	..	Nil	
	Pakaur	...	Nil	
	Rajmahal	...	Nil	

* It rained in the north-west of the subdivision, but quantity not given.

	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHAR—concld.					
Patna Division.	32	Patna	May 21, '92	Nil	Weather—hot with high east wind prevailing. Prospects of *cheena* and sugarcane continue favourable. Rain wanted for the sowing of *bhadoi* crops. Water and fodder-supply getting scarce in the Barh subdivision. Prices of food-grain still rising. Common rice selling at from 10 to 12 seers per rupee. No distress reported.
	33	Gaya Jahánabad Nawáda Aurangabad	,, 21, '92	Nil Nil Nil Nil	Weather—exceedingly hot and oppressive. Sugarcane doing fairly well. *Cheena* being reaped. Prices stationary, but common rice somewhat cheaper at head-quarters. Supply of fodder and water exceedingly scanty, and rain anxiously looked for.
	34	Shahabad Buxar Bhabhua Sasarám	,, 21, '92	Nil Nil Nil Nil	Weather—cool with strong easterly winds. There are no crops on the ground except sugarcane, millet, and *boro* paddy. The first is withering owing to want of moisture. Millet and *boro* paddy are being cut and yielding well. Fodder and water fairly abundant. Prices stationary.
	35	Darbhanga	,, 21, '92	Nil	Weather—very hot in early part of week, cooler towards the end. High east winds. Paddy, *mung*, *cheena*, and other early crops coming up fairly well in low lands. Rain urgently required for preparation of fields for *bhadoi*. Condition of cattle not bad, but water very scarce and bad.
	36	Muzaffarpur Hajipur Sitamarhi	,, 21, '92	Nil Nil Nil	Weather—close; strong east winds; occasional clouds. Sowing of paddy has commenced on low lands in Sitamarhi; elsewhere want of rain is beginning to cause scarcity of fodder and water. Prices stationary.
	37	Saran	,, 21, '92	Nil	Weather—very hot till the 19th; since then cooler with strong east wind and some clouds. Rain much wanted. Water and fodder sufficient. Prices of common rice:— Srs. Ch. Chapra ... ... 11 8 } Siwán ... ... 11 0 } per rupee. Gopalganj ... ... 12 5 }
	38	Champaran	,, 21, '92	Nil	Weather—hot with east wind and stormy. Fields are being prepared. *Kodo*, *makai*, paddy, &c., are being sown. Standing crops require moisture in soil. Prices stationary. In the interior of the district common rice is sold at 16 seers in Adapur, 14 seers in Hardi and Bagha, 13 seers in Madhuban, 12 seers in Dhaka, and 11 seers in Kessaria. Fodder sufficient. No cattle-disease.
ORISSA.					
Orissa Divn.	39	Cuttack	,, 21, '92	Figures not furnished	Weather—cloudy and hot. A shower of rain accompanied by high wind fell at Sadar station on 14th instant. Rain much wanted in the interior for agricultural operations. Fodder and water-supply scanty in some places. Price of common rice has gone up in the interior, it being 11 to 15 seers 12 chitaks per rupee.
	40	Puri	,, 19, '92	Nil	Weather—seasonable. Rain wanted. Harvesting of *dalua* still continues. Miscellaneous crops good. Rice sells at from 10 to 14 seers per rupee.
	41	Balasore	,, 21, '92	0·03	Weather—hot and dry. Scarcity of water throughout the district. Fodder also becoming scarce. Cultivation either not begun or at a standstill for want of rain. About one-fourth of the sugarcane crop is planted. Rice sells at 12 to 13 seers per rupee.
CHOTA NAGPUR.					
South-West Frontier Agency.					
Chota Nagpur Divn.	42	Hazáribágh Giridi	May 21, '92 ...	Nil Nil	Weather—intensely hot. Mango 4 to 12 annas crop. Rain wanted for sugarcane and ploughing operations. Common rice selling at 12 to 13 seers per rupee. Fodder and water-supply scanty in most places.
	43	Lohardaga	,, 21, '92	Nil	Weather—very hot. Clouds hanging about, but no rain which is badly wanted. Common rice selling at 13 seers per rupee. Fodder and water not sufficient.
	44	Palámau	,, 20, '92	Nil	Weather—extremely hot. Condition of sugarcane promising. Rain urgently wanted. Common rice 12 to 14 seers per rupee. Supply of water and fodder extremely short, and the want of water in some parts is getting serious.
	45	Singhbhum	,, 21, '92	Nil	Weather—intensely hot; cloudy in the afternoon during the last three days. Rain badly wanted. *Boro* paddy and sugarcane doing fairly well. Mango is a poor crop. Price of common rice varies from 20 seers in Dumria police outpost jurisdiction in Dhalbhum pargana to 14 seers per rupee in thánas Chaibassa, Chakradharpur, and Monoharpur. Both water and fodder very scarce.
	46	Manbhum Gobindpur	,, 21, '92 ...	0·34 Nil	A little rain fell yesterday (20th). Only sugarcane on the ground. Prospects so far not good. Price of rice from 13 to 16 seers per rupee. Fodder and water getting very scarce.

Published for general information.

* Mean of 5 days. | † Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last [illegible]

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 21st of May 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district.	Of week. Normal mean.	Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th May 1892. Mean for district.	Since 16th May 1892. Normal mean.	Since 16th May 1892. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 24th May* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 21ST OF MAY 1892.

THE meteorological conditions which obtained over the province at the close of the previous week were a little disturbed. On the 15th, or the first day of the present week, the changes were small; pressure fell slowly over the whole of the province and became from about 0·05" to 0·08" below the normal, the defect being largest in Assam and East Bengal; the wind directions were fairly normal, and moderate to strong winds were blowing, bringing up considerable amounts of moisture to the province, and on this day a considerable number of stations in East and North Bengal reported local storms with rain, which had occurred on the evening of the 14th; but, on the whole, the rainfall was not heavy. On the 16th the meteorological changes were very small, and conditions were practically unaltered, and only a few stations in the north of the province reported local storms with rain. On the 17th, pressure rose moderately to rapidly, and conditions became more settled, while pressure was almost normal. On the 18th and 19th the barometric changes were exceedingly small, and only averaged a few thousandths of an inch, and hence during these two days weather was generally fine and settled, and, except for a few local storms in East Bengal, which gave light rain, and for moderate rainfall in the hills of North Bengal, the whole province was almost rainless. On the 20th, however, pressure began to fall moderately, the fall being largest in the western, southern, and south-western districts, and it became about a tenth of an inch in defect of the normal at some of the stations in Bihár, and on the 21st pressure had again fallen rapidly over the whole province, the fall at some stations exceeding a tenth of an inch, and on this day pressure became exceedingly low, the defect at such stations as Bankura and Hazáribágh equalling more than 0·15", and thus a feeble low pressure area or barometric depression had developed over the west of the province. With these conditions a series of disturbances or local storms set in, which gave moderate general rain on the 20th to East and North Bengal, while on the 21st the area of disturbance had extended, and in addition rainfall became fairly general over the greater part of South-West Bengal.

Conditions were therefore fairly normal for the greater part of the week over the greater part of the province, but on the last two days they became very decidedly disturbed, and the disturbance was spreading steadily over the whole province.

Pressure.—The mean pressure for the week has been very considerably in defect of the normal, though the defects have been a little irregular in amount. The largest defects have been registered at such stations as Gaya, Bankipur, and Dehri where they equal about 0·08", but in the east and south-east of the province the defects have been small, and at Comilla, Barisal, and Chittagong they are less than 0·02." In Assam also at Dhubri and Silchar the defects only equal about 0·015". The general defect over the whole province therefore equals about 0·03" to 0·04"

Temperature.—Owing to the absence of anything like heavy rain over the greater part of the province, the temperatures registered during the week have been exceptionally high. In Chota Nagpur the mean temperature for this period has been nearly seven degrees higher than usual; in South Bihár the excess has been about four-and-a-half degrees, and in Orissa, South-West Bengal, and North Bihár about two to three degrees. The excess has been small in East Bengal, only equalling one degree. On the other hand, in North Bengal, where at many stations heavy rain has been falling, there is a defect of 1·6°, and in Assam, where rainfall has been abundant, the defect is 2·5°. For Bengal generally the mean temperature of the week has been nearly three degrees above the normal.

Rainfall.—The falls in North Bengal have occurred almost daily during the week, and have averaged no less than 4·11 inches, which is about 72 per cent. in excess of the normal. In all other districts only occasional local showers have occurred, and in East and South-West Bengal they only average about half an inch or nearly a third of the normal fall. In North Bihár also the falls have averaged a quarter of an inch, or again little more than a third of the normal fall. In the other divisions of Orissa, South Bihár, and Chota Nagpur, rainfall has been practically absent.

Even in North Bengal, however, the falls have been very unevenly distributed. Malda has again received little or no rain, and Dinajpur and Bogra rather small amounts; the Jalpaiguri and Darjeeling districts, on the other hand, have received exceptionally heavy rain, having averaged about 14 and 8 inches respectively. The other districts in North Bengal have received good general rain. In East Bengal, Chittagong, Chittagong Hill Tracts, Backergunge, and Noakhali have received little or no rain, and the other districts moderate amounts. In South-West Bengal, the only districts receiving moderately good rain have been Burdwan, Berhampore, Nadia, and Jessore, and in Bihár only the Purnea district reports good rain.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 21st of May 1892:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 1st April 1892.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All th thermometers are verified, and the readings have been corrected to a standard constructed and verified at th Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four fee above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerl at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables compute i the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; d, drizzling rain; g, gloomy; p, passing temporary showers; <, thunderstorm.

RESULTS OF EXAMINATION OF CANDIDATES FOR APPOINTMENT AS DEPUTY MAGISTRATE-COLLECTORS AND SUB-DEPUTY COLLECTORS.

RESOLUTION.

APPOINTMENT DEPARTMENT.

Dated Darjeeling, the 25th May 1892.

READ—

The Resolution of 20th July 1891, reporting the result of the examination held in March in that year, and appointing certain candidates to be probationers of the Executive Branch of the Provincial Service.

The Notification of 14th September 1891, regarding the admission of Natives of India to the Opium Department.

The Notification of 10th October 1891, publishing rules for the Subordinate Executive Service Examination of 1892.

The Reports of the Examiners at the examination held on the 28th, 29th, 30th and 31st of March 1892.

1. As the result of the examination for the Subordinate Executive Service, held in 1891, sixteen gentlemen were selected to be Probationary Deputy Collectors, three were appointed to be Temporary Sub-Deputy Collectors, and eight were appointed to be Probationary Sub-Deputy Collectors. The sixteen Probationary Deputy Collectors have in due course been appointed to be

Officiating Deputy Magistrates and Deputy Collectors, and similarly the eight Probationary Sub-Deputy Collectors have been absorbed as substantive *pro tempore* Sub-Deputy Collectors in the fourth grade. The Lieutenant-Governor is glad to say that the report furnished by their official superiors of the working of these probationary officers has been uniformly satisfactory.

2. In September 1891 it was decided that a competitive examination of Native candidates for the Opium Department would be held in 1892 at the same time and in the same subjects as the examination prescribed for candidates for the Executive Branch of the Provincial Service; and it was declared that the candidate who obtained the highest aggregate of marks would be admitted to the Opium Department and be appointed between the second and third of the three successful European and Eurasian candidates at their examination. The candidate so appointed would be considered a probationer for the first two years of his service.

3. In October it was notified that, at an examination to be held in March 1892, 20 candidates would be selected for Probationary Deputy Collectorships on a salary of Rs. 50 a month, and 10 for Probationary Sub-Deputy Collectorships on a salary of Rs. 30 a month respectively. It was announced that 10 of the probationers for Deputy Collectorships would be appointed from the first 10 candidates on the list in order of merit, that 10 would be selected by the Lieutenant-Governor either from those who are now Sub-Deputy Collectors, or from among those who have obtained a minimum of one-third of the total marks, and that from the remainder of those qualified by obtaining one-third of the total marks the Lieutenant-Governor would select 10 more candidates as probationers for Sub-Deputy Collectorships.

4. The examination so notified was held on the 28th, 29th, 30th and 31st of March 1892. No fewer than 195 competitors (of whom all except five were graduates of the Calcutta University) entered their names for the examination, and of these 190 actually appeared and sent in papers. Of these 190 candidates, 176 took up Bengali as their vernacular, 8 took up Hindustani, and 5 took up Uriya. One gentleman, Mr. J. E. Friend-Pereira, took up no vernacular. No less than 179 of the candidates have obtained the minimum of one-third marks necessary for appointment into the Subordinate Executive Service by nomination.

5. The following ten gentlemen, who stood first in order of merit, are entitled to appointments as Probationary Deputy Collectors:—

	No. of marks.
Babu Sriram Chunder Bose, B.L. ...	... 588
„ Ambica Prasad Sen, M.A., B.L.	... 580
„ Bunku Behary Dutt, B.L. ...	... 570
„ Raj Kishore Das, B.L. ...	... 562
„ Rasik Lall Sen, B.A. ...	... 541
„ Hemendra Lall Khastgir, M.A.	... 537
„ Bhabani Prosad Neogi, B.A. ...	... 522
„ Grish Chunder Nag, B.A. ...	... 517
„ Kunja Bihari Goswami, B.L. ...	... 516
„ Nogendro Chunder Sen, B.L. ...	... 513

6. Babu Nogendro Chunder Sen was a candidate for the Opium Department as well as for the Subordinate Executive Service. He has, however, intimated that he would prefer to accept an appointment in the Subordinate Executive Service. The candidate for the Opium Department who obtained the next highest aggregate number of marks is Babu Mohima Nath Bhattacharjya, B.A., who is thirteenth in the general list and obtained 500 marks. He has been offered and accepted an appointment in the Opium Department, on the conditions stated in the notification of the 14th September last.

7. Of the ten selected candidates for Probationary Deputy Collectorships, one, Babu Rasik Lall Sen, is already a third grade Sub-Deputy Collector employed under the Administration of Assam, and draws a salary of Rs. 150 a month; another, Babu Kunja Bihari Goswami, is a substantive *pro tempore* Sub-Deputy Collector in Bengal in the fourth grade, drawing a salary of Rs. 100 a month. In consideration of their position in the service, they will at once be appointed to be Officiating Deputy Magistrates and Deputy Collectors on a

salary of Rs. 200 a month. There will therefore be two vacancies among probationers selected by merit, and the two next candidates in the list who occupy a position of equality in the eleventh place will be considered as entitled to appointments as Probationary Deputy Collectors. Their names are—

	No. of marks.
Babu Nogendro Nath Mukerjea, B.L.	503
„ Brajendra Nath Roy, B.A.	503

Of these two officers, again, the latter, Babu Brajendra Nath Roy, is already a substantive *pro tempore* Sub-Deputy Collector in Bengal in the fourth grade, drawing a salary of Rs. 100 a month. He will therefore be at once appointed to be an Officiating Deputy Magistrate and Deputy Collector on a salary of Rs. 200 a month. The thirteenth candidate having selected the Opium Department, the appointment of Probationary Deputy Magistrate will devolve on the fourteenth in the list, Babu Asutosh Bagchi, M.A., who obtained 490 marks.

8. The number of candidates to be selected by the Lieutenant-Governor among those who have obtained one-third marks is fixed at ten. The choice has been carefully made with reference to the number of marks obtained, the claims upon Government of members of the candidate's family, and the interests of different classes of the community. The following are the candidates selected for appointment as Probationary Deputy Collectors:—

Babu Ramani Mohun Das, M.A.	Babu Nogendro Nath Mittor, B.A.
„ Ramapati Chatterjea, B.L.	Moulvie Syed Abdul Malek, B.A.
„ Harendra Kumar Ghose, B.A. (I).	„ Mohiuddin Ahmed, B.A.
„ Nikhil Nath Roy, B.L.	„ Abdul Kadir, B.A.
„ Basanta Kumar Raha, B.L.	Mr. J. E. Friend-Pereira, B.A.

9. Of those, Babu Harendra Kumar Ghose is already a substantive *pro tempore* Sub-Deputy Collector of the fourth grade drawing a salary of Rs. 100 a month. He will therefore be at once appointed to be an Officiating Deputy Magistrate and Deputy Collector on Rs. 200 a month. To fill the vacancy created by this appointment Babu Uma Prasanna Guha, M.A., is selected as a Probationary Deputy Collector. Mr. Friend-Pereira, although he took up no vernacular language, obtained the highest marks in English Essay of any candidate. He is now a member of the Subordinate Executive Service, fourth grade, under the Administration of Burma, on a salary of Rs. 150 a month, and will therefore also be appointed to be an Officiating Deputy Magistrate and Deputy Collector on Rs. 200 a month. To fill the vacancy thus caused, Babu Jagadis Chunder Sen, M.A., is selected as a Probationary Deputy Collector.

10. All these probationary officers will receive a salary of Rs. 50 per mensem, and if the report from the districts where they are stationed is favourable they will, after such period of probation as may seem advisable, be appointed to be Officiating Deputy Magistrates and Deputy Collectors as vacancies occur. They will not ordinarily be vested with magisterial powers until they are so appointed. Separate orders will now at once be passed posting all the gentlemen above named to districts.

11. There are at the present moment 41 Officiating Deputy Magistrates and Deputy Collectors, or eight in excess of the vacancies in the several grades. But against this excess there is a deficiency in the number of officers sanctioned for Covenanted appointments, which, under the orders of the Government of India, may be supplied by appointments in the Subordinate Executive Service. The deficiency in the Covenanted Service consists of 23 officers, and deducting from this number the eight Officiating Deputy Magistrates in excess, the number of officers still short is fifteen. Leaving a margin of ten to provide for officers returning from leave or deputation, five appointments are available in the grade of Officiating Deputy Magistrates, which can now be filled up by the promotion of Sub-Deputy Collectors.

12. The Lieutenant-Governor has decided in this connection that the claims of Special Deputy Collectors who are appointed for specific temporary work should receive the first consideration. These officers are now always carefully chosen from among the grades of Sub-Deputy Collectors, and although the work done by them is in theory of a temporary nature, experience has shown

that there is enough of it to furnish continuous employment for a considerable number of officers. It is only fair to them that they should receive a preferential claim among Sub-Deputy Collectors for promotion to be Officiating Deputy Collectors in the regular line. Such officers, when included in the regular cadre of the Subordinate Executive Service, will not be indefinitely detained on special duty, but will be transferred to general employment as soon as possible: until, however, they can be so transferred they will be seconded. Under these orders the following Special Deputy Collectors are now appointed to be Officiating Deputy Collectors, but so long as they remain employed on their special work they will be seconded in the regular line of the service:—

Babu Behari Lall Mukerjea, B.A. ...	Employed on land acquisition work in North Bihár.	
" Jadu Nath Sircar ...	Ditto	revaluation work in Manbhum.
" Prosunno Kumar Bose ...	Ditto	income-tax work in Calcutta.
" Surjya Kumar Das ...	Ditto	batwara work in Mymensingh.
" Satya Taran Mukerjea ...	Ditto	revaluation work in Burdwan.

13. These officers will now be severally seconded in the regular line by the appointment of Babus Rasik Lall Sen, Kunja Behari Goswami, Brajendra Nath Roy, Harendra Kumar Ghose, and Mr. J. E. Friend-Pereira, who, under orders contained in this Resolution, have been appointed to officiate as Deputy Magistrates. They should all of them revert to general duty when they have finished the special work on which they are engaged, or arrangements have been made for relieving them of it.

14. The following are the ten candidates selected by the Lieutenant-Governor from among those who have obtained one-third marks to be Probationary Sub-Deputy Collectors:—

Babu Charu Chunder Chatterjea, B.A.	Babu Abhay Prosad Das, B.A.
" Makhan Lall Chatterjea, M.A.	" Jadu Nath Chatterjea, M.A.
" Hem Chunder Chatterjea, M.A., B.L	Moulvie Syed Ahmad Ali Khan, B.A.
Mr. Rowland Nagendro Lall Chandra, M.A.	" Afsaruddin Mahomed, B.A.
Babu Narendro Kumar Ghose, M.A.	" Gholam Ghous, M.A.

15. These probationary officers will receive a salary of Rs. 30 per mensem at present, and will, if they are satisfactorily reported on, be gradually absorbed into the fourth grade of Sub-Deputy Collectors as vacancies occur. Separate orders will at once be passed posting them to districts.

ORDER.—Ordered that the above Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Offg. Chief Secy. to the Govt. of Bengal.

RESOLUTION ON THE REPORT ON THE CALCUTTA MEDICAL INSTITUTIONS FOR THE YEAR 1891.

MUNICIPAL DEPARTMENT—MEDICAL.

Darjeeling, the 28th May 1892.

RESOLUTION No. 157T.—M.

READ—

The Report on the Calcutta Medical Institutions for the year 1891.

Read also—

The Report for the year 1890 and the Resolution recorded thereon.

The year 1891 was more unhealthy for the Town than the previous year, the number of deaths reported for Calcutta, Howrah, and the Suburbs being 23,650 in 1891, against 22,241 in 1890. Cholera prevailed with great severity during the early part of the year, owing, it is said, to the large influx of pilgrims and others into Calcutta during the Ardhodoy Jog festival. The mortality from this cause in the Town of Calcutta alone rose from 963 in 1890 to 1,553 in the year under report, while that for the combined area, including Calcutta, Howrah, and the amalgamated Suburbs, rose from 2,243 to 3,445. The mortality from fever was again above the average, exceeding that of the previous year in the combined area by 1,094. There was a marked diminution, however, in the mortality from small-pox, and the entire area appears to have enjoyed a comparative immunity from this disease. The deaths from other causes remained practically the same.

2. The following statement shows the number of indoor and outdoor patients treated in the several hospitals and dispensaries during the past two years:—

Name of Institution.	1890.								1891.							
	Indoor.			Outdoor.		Total number of patients treated, both indoor and outdoor.	Total number of deaths among indoor patients.	Percentage of deaths on total number of indoor patients treated. (a) Reckoned on cases treated exclusive of those treated in the ophthalmic ward of the Medical College Hospital.
(b) Exclusive of 214 cases of no appreciable diseases.
(c) Ditto 39 ditto ditto.
(d) Ditto 20 ditto ditto.

There was an increase in the number of patients treated in all the hospitals with the exception of the Presidency General and Police Hospitals. The decrease in the number of patients treated at the Presidency General Hospital is said to have been due to there having been a smaller number of vessels in port, and consequently fewer seamen admitted to hospital; while in the case of the Police Hospital the decrease is ascribed to the absence of any outbreak of influenza. The total number treated, including both indoor and outdoor patients, rose from 232,435 to 245,136; the daily average of outdoor patients increased from 1553·14 to 1671·98, and that of indoor patients from 1202·93 to 1205·67. During the year an outdoor department was opened at the Eden Hospital, and though the attendance was not as large as might have been expected, there is every reason to believe that it will improve as the dispensary comes to be more generally known.

Of the total number of patients, both indoor and outdoor, treated in all the hospitals during the year, 153,705 were men, 34,678 women, and 56,753 children. The corresponding figures for the previous year were 143,722, 33,017 and 55,696. More than 50 per cent. of the patients treated were Hindus, next in order coming Muhammadans, Eurasians, Europeans, and other classes. Fewer Europeans sought relief at the hospitals during 1891 than in the previous year.

3. The death-rate among all the patients under treatment during 1891 was 127 per mille against 124 in 1890, excluding the patients treated for eye-diseases. This includes deaths from cholera, without which the death-rate would be 113 against 114 per mille. The average death-rate in English hospitals is stated to be 80 per thousand, and in French hospitals 95. In 1882 the death-rate in St. Bartholomew's Hospital in London was as high as 120, the Edinburgh rate being 105. As in the previous year, the death-rates were highest in the Howrah and Campbell Hospitals, which is natural, seeing that these are the refuges to which emigrants taken ill in the depôts, moribund cases found in the streets, and pauper patients generally are sent. Last year's Report and Resolution drew attention to the fact that the death-rate in our hospitals was persistently higher among girls than boys. This year this inequality has been removed, as the following statement shows :—

		Admissions.		Deaths.		Death-rate per mille.	
		Boys.	Girls.	Boys.	Girls.	Boys.	Girls.
1888	...	662	647	74	73	111·7	112·8
1889	...	797	776	77	99	96·6	127·5
1890	...	950	701	78	99	82·1	141·2
1891	...	1,006	793	110	86	109·3	109·2

The combined ratio of 109·3 per thousand is very little in excess of 108, the ratio of mortality among children in French hospitals during 1885.

4. There were only 21 cases of small-pox treated during the year, against 321 in the previous year; all the cases were admitted into the Campbell Hospital, and five proved fatal. The number of admissions for cholera was 761 against 528 in 1890; nearly half of this number were treated in the Campbell Hospital. In 455 cases, or 59·7 per cent. of the whole, the disease proved fatal. The number of cholera cases treated in the Presidency General and Howrah Hospitals was comparatively small. The Inspector-General states that there was no outbreak of the disease, such as occurred in 1890, among the patients under treatment in these hospitals, and claims this as due to the improvement in the drainage system. Cholera has, however, shown itself since the close of the year under report, and this has led to the discovery of further defects in the sanitary arrangements at these hospitals. The Lieutenant-Governor trusts that the matter will be made the subject of careful investigation. The cause of the prevalence of cholera in the Campbell Hospital is said to have been traced to the bad quality of the milk used by the patients, the theory being that the supposed germ of cholera is communicated by means of water used to adulterate the milk. The Inspector-General, however, thinks that the defective condition of the latrines may have had something to do with it. He maintains that the occurrence of an outbreak of cholera in a hospital among the patients under treatment for other diseases is always an indication of grave sanitary defects of some kind or other, thus implying that if the cause is removed the effect can also be prevented; and his opinion must necessarily carry great weight with the profession. There is, however, another school which holds that cholera is communicated through the air, and its supporters sometimes go so far as to maintain that it is as idle to seek for the causes of cholera as to enquire why the bullets of the garrison strike down one man rather than another on the glacis of a besieged fort. However this may be, the fact remains that the cause of cholera has not yet been conclusively traced. Attention has been drawn by the Inspector-General to "the practical immunity of the European residents of Calcutta of late years from cholera" as an illustration of what may be effected by improved sanitary surroundings. This, if it be a fact of permanent duration, is an important piece of evidence, but though the statement may be broadly true, it is certainly subject to a considerable number of exceptions. Dysentery and diarrhœa

were somewhat more prevalent than in the previous year, but the rate of mortality from these causes was less. Malarial fever was slightly less prevalent among the indoor patients treated during 1891 than in 1890, the figures for the two years being 4,235 and 4,366 respectively. The number of deaths from this cause was, however, heavier than in the previous year, the figures being 398 against 289. The number of cases of venereal diseases treated at the hospitals declined from 12,326 in 1890 to 11,866 in 1891. The difference is, however, too small to warrant the opinion that these diseases are less prevalent now than they were before. A comparison with the figures of previous years would have been useful, but the Inspector-General explains in paragraph 23 of the report that no comparison can be made with the prevalence of the disease previous to 1890, as in that year the nomenclature was changed. If so, a grave responsibility rests on those authorities who by a change in nomenclature have obscured statistics important to science. The number of cases of leprosy treated during the year was 134, of which 122 were admitted into the Campbell Hospital. Before such cases are admitted into this hospital in future, it should be ascertained whether no accommodation can be found for them in the Leper Asylum. There were 26 cases of enteric fever under treatment during the year, of which 9 proved fatal. This is the highest number on record since 1877. Experience shows that it is confined chiefly to Europeans.

5. The number of important surgical operations performed during the year was 2,221 against 2,080 in 1890. The revised classification prescribed by the Government of India was adopted in 1891, with the result that some institutions returned a larger number of major operations than before, while others returned less. This is shown in the cases of the Mayo and Medical College Hospitals, where the number of major operations are placed at 451 and 1,225 respectively, against 189 and 1,447 in 1890. Changes in classification which produce such results as this may be necessary, but they are very inconvenient, preventing the possibility of comparing the work of one year with another. The number of minor operations was 20,275 against 19,956. Death ensued in 107 against 88 of the cases in which major operations were performed, giving a death-rate of 45 per mille against 39 in 1890. The number of dental operations performed was 2,431 against 2,320. The statistics show that the number of Eurasians applying for dental treatment far exceeded that of other classes, and Mr. Woods, the Professor of Dentistry at the Medical College, has, it is said, observed that the teeth of mixed races are more prone to decay than those of other classes. This may possibly be a fact, but it is not established by the figures given in the report, which do not show the ratio to the total population borne by the classes referred to. In the case of Hindus, who are stated to be the next most frequent applicants for relief, decay of the teeth is said to be on the increase, and is attributed by the Professor of Dentistry to the influence of advancing civilization. The subject does not appear yet to have got beyond the stage of plausible conjecture.

6. In the Eden Hospital 1,485 women and 326 children were treated during the year, against 1,409 and 363 in 1890. Of the total number of patients treated, 979 were Europeans and 832 Natives, against 1,024 and 748, the corresponding figures for the previous year. The number of deaths among the Europeans was 32 against 27, and that among the Natives 65 against 42. The increase in the mortality among both classes of patients is attributed to the number of moribund cases admitted. There were 542 confinement cases against 442 in the previous year, of which 21 terminated in death against 10. Dr. Joubert remarks that among the native women there was an unusual number of bad labour cases, which he regards as a hopeful sign, indicating the growing popularity of the hospital with the native community. The number of cases of septicæmia increased from 15 to 24, of which eight originated in the hospital. It is hoped that the special precautions which are reported to have been taken to guard against this malady will reduce the number of such cases in future. The arrangements for supplying hot food and hot water in this hospital are said to be still very defective, although attention was drawn to them in the report for 1890. The Lieutenant-Governor trusts that the Principal will take steps to remedy this state of things, which is likely to impair the reputation and popularity of the hospital.

7. During the year the Shama Churn Law Eye Infirmary was opened, and all cases which were formerly treated in the ophthalmic wards of the Medical College Hospital were transferred to it. As a separate institution, the Eye Infirmary appears to have attracted more patients, the number of those seeking outdoor relief having increased from 10,466 to 11,389. The number of indoor patients was 504 against 563 in 1890. Most of the operations performed during the year consisted of cataract extraction, the percentage of success being 66·79, against 68·81 in 1890.

8. The number of Jewish patients, both indoor and outdoor, treated at the Ezra Hospital increased during the year. The outdoor patients numbered 2,279 with a daily average of 12·63, against 1,633 with a daily average of 9·3 in 1890. The indoor patients numbered 342 with a daily average of 16·73, against 248 with a daily average of 11·33.

9. The nursing arrangements at all the hospitals, especially at the Presidency General, Medical College, and Eden Hospitals, are reported to have been satisfactory. Thirteen pupil-nurses and eight pupil-dhais passed out of the Eden Hospital during the year, which speaks well for the training received by them at this institution.

10. The invested capital of the hospitals increased from Rs. 5,77,000 to Rs. 5,83,000. More than half of this belongs to the Mayo Institutions, and the increase during the year was due to the munificent gift of Rs. 10,000 made by Maharaja Bahadur Sir Jotendro Mohun Tagore to the Mayo Native Hospital. Securities to the value of Rs. 4,000 were sold during the year out of the capital of the Howrah General Hospital to meet the cost of quadrennial repairs. The following statement compares the main heads of income and expenditure of the hospitals for the past two years:—

Income.

	1890.	1891.
	Rs	Rs.
Opening balance	15,896	16,289
From Government	3,17,037	3,21,845
Local Funds	65,443	67,527
Municipal Funds	34,347	34,621
Interest on investments...	24,917	27,998
Sale of securities	......	4,173
Subscriptions—		
Europeans	10,659	12,319
Natives	1,512	11,696
	1,36,878	1,58,329
Total ...	4,69,811	4,96,468

Expenditure.

	1890.	1891.
On establishment	1,88,857	1,86,736
" bazar medicines	4,321	4,216
" Europe "	24,195	23,708
" diet	1,07,493	1,12,221
" miscellaneous charges	61,414	75,786
" buildings and repairs	67,242	66,776
Invested during the year	......	10,000
	4,53,522	4,79,443
Closing balance	16,289	17,020
Total ...	4,69,811	4,96,463

11. The total income of the year, excluding the opening balance, was Rs. 4,80,174, which exceeds that of the previous year by Rs. 26,259. The increase occurred under all heads of income, except Europe medicines, but was mainly due to the donation of Rs. 10,000 above mentioned given to the Mayo Hospital. The Lieutenant-Governor is glad to notice the improvement in the amount of subscriptions realized from Europeans as well as Natives. The

contributions from Local Funds increased by Rs. 2,000, but little or no advance was made in the amount contributed from Municipal Funds. The total expenditure of the year exceeded that of the previous year by Rs. 15,920, the excess being chiefly on account of diet and miscellaneous charges. In the Medical College Hospital alone there was an increase of Rs. 4,412 in the expenditure on diet, and in the Presidency General Hospital the miscellaneous charges exceeded those of the previous year by Rs. 11,847. This, it is explained, was due to the payment of rates and taxes for the year 1891 and the previous year, the payment of the value of clothing purchased in 1890, and repairs and improvements to the hospital. In Statement V, Part I, appended to the report, the average cost of each diet during the year is shown to have been as follows:—

	Europeans. A.	Europeans. P.	Natives. A.	Natives. P.
Medical College Hospital	6	9½	3	1¾
Presidency General "	8	9	......	
Campbell "	......		2	3½
Police "	......		2	4
Mayo Native " ... ... } Chandney " ... ... }	......		3	7
Howrah General "	8	6	2	3

No explanation has been offered of the varying cost of a diet in the different hospitals. The averages for Europeans are said to include the cost of diet for paying as well as non-paying patients, and it is also added that the maximum of eight annas for non-paying patients was never exceeded. Nothing has, however, been said in respect of the averages for Natives. The Lieutenant-Governor would be glad to have a fuller explanation of these figures furnished in future reports. The excess expenditure of Rs. 698 incurred under the head of establishment in the Campbell Hospital is said to have been partly due "to the furlough allowance of the Superintendent from 1st January to 13th November having been debited against the hospital." It is not understood how these charges come to be debited to the hospital, as furlough allowances when drawn in England are adjusted between the Government of India and the Secretary of State. The Inspector-General will be asked to look into this point. In future reports it should be stated which of the Calcutta hospitals have been personally inspected by the Head of the Medical Department during the year.

12. The thanks of the Lieutenant-Governor are due to Dr. Hilson, the Inspector-General of Civil Hospitals, for his report and the promptness with which it is submitted, which is the more commendable, as the statements were entirely changed and fuller information had to be furnished on several points not noticed in former reports.

ORDER.—Ordered that a copy of this Resolution, with a copy of the Report, be submitted to the Government of India for information.

Ordered also that a copy of this Resolution be forwarded to the Inspector-General of Civil Hospitals for information and guidance, and that a copy of this Resolution and of the Report be forwarded to the Chairman of the Corporation of Calcutta, the Commissioner of Police, Calcutta, the Governors of the Mayo Hospital, the Commissioner of Burdwan, and the Sanitary Commissioner, Bengal, for information.

Ordered also that this Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE JAIL DEPARTMENT FOR THE YEAR 1891.

No. 129P.D.

RESOLUTION.

JAILS.

Dated Darjeeling, the 28th May 1892.

READ—

The Report on the Administration of the Jail Department for the year 1891.

Read also—

The Reports for the years 1889 and 1890, and the orders of Government recorded thereon.

Dr. Lethbridge was in charge of the Department throughout the year, except for 2½ months when he was absent on special duty, and Mr. A. D. Larymore, Superintendent of the Alipore Jail and Deputy Inspector-General of Jails, was in charge. Since the close of the year, Dr. Lethbridge has been appointed Superintendent of Thuggee and Dacoity Operations, and his place as Inspector-General of Jails has been taken by Surgeon-Major D. W. D. Comins. In order to leave no arrears of work to his successor, Dr. Lethbridge completed his report for the year 1891 before making over charge, and this report, which is due to Government on the 15th April, was received in print on the 8th of that month.

2. Dr. Lethbridge opens his report with some figures to show the progress made in the Department during the 14 years it has been under his control. This comparison gives the following results:—

	1873—1877.	1887–1891.
Gross expenditure, excluding jail buildings	Rs. 12,81,699	Rs. 11,04,208
Annual cost of rations per head of jail population	„ 28-0-5	„ 23-0-3
Cash earnings per head for each convict sentenced to labour ...	„ 13-13-0	„ 22-7-0
Punishments by flogging ...	3,447	266
Escapes of convicts ...	85	15
Death-rate among all classes of prisoners per mille ...	51·1	37·2

These figures show sufficiently clearly the great improvement which has taken place in jail administration during the past 15 years. Admitting that many of the changes which have taken place are due to the greater attention given of late years by this Government and the Government of India to the subject of jail management, the Lieutenant-Governor has no reason to doubt that the chief portion of the credit for the great advance which has been made is due to the able manner in which Dr. Lethbridge has performed the duties of his office.

3. *Judicial statistics.*—During the year the Naya Dumka Subsidiary Jail was converted into an intermediate jail, thus raising the number of jails in the province from 45 to 46. The Rajmahal lock-up having been converted into a subsidiary jail, the number of such jails remains at 86, as last year. The Tippera Jail, which was an intermediate jail during the year under review, has, since the close of the year, been made a district jail. The total number of all classes of

prisoners in jails and subsidiary jails, together with corresponding figures for the previous nine years, is shown in the following table:—

	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.
Number of prisoners of all classes in jails and subsidiary jails on the last day of previous year	16,367	15,595	14,718	15,354	15,076	14,029	13,210	13,985	15,048	15,211*
Total number admitted during the year	77,981	74,643	80,852	80,853	77,966	76,664	81,136	84,639	80,959	87,925
Total ...	94,348	90,238	95,570	96,207	93,042	90,293	94,346	98,624	96,007	103,136
Total discharged ...	78,753	75,520	80,216	81,131	78,413	77,083	80,361	83,576	80,800	86,546
Balance at the end of the year	15,595	14,718	15,354	15,076	14,029	13,210	13,985	15,048	15,207	16,590
Daily average of all classes ...	16,155	15,026	15,101	15,177	14,806	12,250	13,731	15,026	14,777	15,916

* Two prisoners (one convict and one under-trial) who remained on the 31st December 1890 at the Dum-Dum subsidiary jail, and two convicts who were confined at the Rajmahal Magistrate's hájat on the 31st December 1890, before it was converted into a subsidiary jail, were not accounted for in the statistics for 1890.

From these figures it appears that the number of admissions during the year was larger than in any other of the past ten years, while the number of prisoners remaining in custody at the end of the year was larger than in any year since 1880. The increase in admissions is spread equally over under-trial prisoners, convicts, and civil prisoners. No satisfactory explanation of this increase has been furnished: there was on the whole no greater scarcity in 1891 than in 1890, and there is no reason to suppose that police activity was greater than in previous years.

4. *Numbers in different classes of jails.*—Of the total daily average of 14,449 convicts, 53·40 per cent. were confined in central jails, 44·29 in district jails, and 2·31 per cent. in subsidiary jails. The daily average number of convicts in central jails was 7,716 against 7,313 in 1890, and the Inspector-General reports that these jails were kept absolutely full throughout the year. No doubt it is the proper policy to keep the central jails always full, as in them the maintenance of discipline is better and the work of the prisoners more profitable than in the smaller jails. Dr. Lethbridge remarks that if the increase in jail population continues, it will become necessary to convert some of the existing intermediate jails into district jails, and that it will be impossible to carry out the suggestion made by the Prison Committee that only prisoners with sentences of one year or upwards should be confined in central jails. However this may be at the present time, the number of prisoners in district and intermediate jails should be kept down as far as possible in ordinary seasons, and it is certain that many district jails are as a rule not nearly full.

5. *Releases.*—The following table compares the releases under the various heads with the figures for the six previous years:—

	1885.	1886.	1887.	1888.	1889.	1890.	1891.
Released on expiry of sentence	27,379	27,125	21,328	26,452	28,754	28,464	26,878
" on appeal	1,750	1,845	1,903	1,980	1,942	2,038	2,120
" under remission rules	1,565	1,673	1,017	1,352	1,575	1,622	1,661
" on medical grounds	22	26	28	33	37	39	105
" on other grounds	75	27	6,484	88	2	9	9

During the year the views expressed by the Lieutenant-Governor in the Resolution on the Jail Administration Report of 1890, regarding the release of moribund prisoners, have been brought into effect, and the number of releases in such cases rose from 39 in 1890 to 105 in 1891. No formal alterations in the rules were, however, made till February of the present year, when a rule was issued by which moribund prisoners, who have not been sentenced to imprisonment for a period exceeding 7 years for any very heinous crime or series of crimes, may, when they have friends who will be responsible for their safe keeping, be released on the order of the Magistrate of the district, if the unexpired portion of their sentence does not exceed six months, and in other cases on the orders of Government. It has been clearly explained that the change in the rule has been made not with a view to prevent the jail mortality from being unduly swelled, but from motives of humanity, that the prisoner may have the

consolation of dying at home. The former rule on this point was that such releases could only be made where the release of the prisoner was reasonably likely to save his life.

6. *Numbers transported and executed.*—The number of transportations from Bengal to the Andamans fell from 157 in 1890 to 90, of whom only 7 were females, during the year under review. There were 37 executions during the year, compared with 26 of 1890 and 17 in 1889.

7. *Burman convicts.*—The total number of Burman convicts confined in the Bengal jails at the close of the year was 387, against 470 remaining at the close of 1890. There were nine deaths among these convicts, against 15 in the preceding year. Ninety-two were despatched to Rangoon and four were discharged locally, while 22 were received against 20 in 1890. The number of offences committed by Burman prisoners was 699 as compared with 953 in the previous year, and the number of offences connected with work fell from 452 to 251. This is accounted for by the promotion of a larger proportion of the convicts to be convict warders.

8. *Classification of convicts.*—Of the 34,814 convicts admitted direct into jail, 19,872 or 57·08 per cent. were Hindus, 13,535 or 38·88 per cent. were Muhammadans, and 299 or ·86 per cent. were Christians, the balance being aboriginals, Buddhists and Jains. The number of juveniles under 16 years of age admitted to jail was 371 or 1·06 per cent. of total admissions, as compared with 374 or 1·14 per cent. in 1890. The number of prisoners previously engaged in agricultural pursuits rose from 19,021 or 60·47 per cent. in 1890 to 21,282 or 63·44 per cent. in 1891. The number of female convicts admitted direct to jail was 1,265 as compared with 1,431 and 1,503 in 1890 and 1889 respectively.

9. The number of re-convicted prisoners admitted into jail was 3,226 or 9·26 per cent. of the total number, against 3,331 or 12 per cent. in 1890. Of these, 2,305 had one previous conviction, 558 two previous convictions, and 363 more than two previous convictions. During the year the organization of the anthropometric system for the identification of habitual offenders, which has been made over to the Police Department, made considerable progress, and all the important criminals in the central jails have already been measured. The number of persons sent to jail in default of giving security for good behaviour rose from 1,303 to 1,448.

10. *Sentences of convicts.*—A steady increase in the proportion of prisoners with short sentences has been noticed for some years; of 15,429 convicts confined in the jails on the 31st of December 1891, 7,993 or 51·8 per cent. had sentences not exceeding one year, as compared with 6,679 or 47·6 per cent. in 1890. In last year's Resolution it was noticed that in many cases simple imprisonment was ordered where the proper punishment would have been rigorous imprisonment; and during the year under review, while the total number of sentences increased by nearly 2,000, sentences of simple imprisonment fell from 2,557 to 2,472. There appears, however, still to be room for considerable improvement in this direction, and an impression still exists among some Magistrates that if a prisoner is too old and weak to be capable of much labour, he should be sentenced to simple imprisonment. This is a mistake. In such cases the sentence passed should be one of rigorous imprisonment, and it should be left to the Jail officials to employ the prisoner on some light labour suitable to his strength. Dr. Lethbridge again calls attention to the very small number of sentences of rigorous imprisonment with solitary confinement, viz., 56 against 30 in 1890. The Lieutenant-Governor has himself noticed that the cells appear to be used almost solely for the purposes of jail punishment, and hardly ever as a part of a sentence. In other provinces this form of punishment is freely used in criminal courts, and Sir Charles Elliott sees no reason why it should be otherwise in Bengal. The number of sentences of imprisonment with whipping rose from 90 in 1890 to 95 in 1891. The number of convicts whipped under judicial sentences rose from 1,329 to 1,528, while the number of boys under 16 ordered by judicial courts to be whipped fell from 500 to 458.

11. *Under-trial prisoners.*—The number of under-trial prisoners admitted during the year was 30,304, and there were 1,099 prisoners under trial at the close of the year 1890, against 1,089 at the end of 1891. Of these 15,036 or 49·6 per cent. were finally convicted. The number of admissions was greater

than in any of the preceding ten years. There were 33 escapes during the year among under-trial prisoners. Of these, one was from the intermediate jail at Malda, and the rest from subsidiary jails. Of the escaped prisoners, nine remained uncaptured at the end of the year.

12. *Detention of under-trial prisoners.*—The average period of detention in Sessions cases for the whole province was 48·96 days as compared with 45·88 days in 1890. Of the 16 districts with the worst average in this respect, all but two are under a Judge who also holds Sessions in another district. The average detention in cases before Magistrates fell from 13·28 days in 1890 to 11·96 days in 1891. In the cases of Champaran and Khulna, the average detention of such prisoners was less than 3 days, which is a remarkably low figure. The unnecessary postponement of cases is a subject to which the Lieutenant-Governor has given much attention, and His Honour has every reason to hope that, as anticipated by the Inspector-General, there will be a further improvement in regard to the detention of under-trial prisoners during the present year.

13. *Civil prisoners.*—There were 73 civil prisoners in confinement on the last day of 1890, and the number of admissions during 1891 was 1,089, against 969 in 1890. Of the total number, 15 were transferred, 1,074 were released, and two died of cholera.

14. *State prisoners.*—Three Lushai chiefs sent down by the Assam Government were received in the Hazáribágh Jail. Two of these men committed suicide by hanging themselves with ropes made from their clothing. The remaining chief was in jail at the close of the year, and was in good health. Twenty-one prisoners from Manipur passed through the Alipore Jail on their way to the Andamans.

15. *Jail buildings.*—The total expenditure during the year was Rs. 2,08,705, of which Rs. 1,35,190 were spent on Original Major Works. In future years the Inspector-General will receive a fixed grant for Original Works, which has been fixed at Rs. 1,00,000 for the year 1892. Within these limits the selection of the most urgent among the works which have received administrative sanction will be made by the Inspector-General at his discretion. The subject of jail buildings is one to which great attention has been paid during the year. It is the Lieutenant-Governor's opinion that there has been some unnecessary expenditure on jail construction in Bengal, and especially in subsidiary jails, due to the prevalent conviction that all jail buildings must be of masonry work. For the subsidiary jails, which on an average contain four convicts and six under-trial prisoners, the cost of construction on the standard plan has been from Rs. 15,000 to Rs. 20,000 apiece, and the expenditure during the past year was Rs. 64,272. Not only are the surrounding walls and the sleeping barrack high and of masonry, but the very workshed under which the oil-mill stands, the sheds for warders, and even their cooking sheds must also be of masonry work. Expenditure has thus increased through the mistaken belief that it is cheaper to build with brick and avoid subsequent repairs, whereas in fact the mere interest on the cost of a *pucka* building is often equal to the whole cost of a *cutcha* one, and in all cases exceeds the cost of the annual repairs to the latter. In these respects His Honour has spared no effort to introduce a more economical spirit. Since, however, these jails are being built on a standard plan, and only a small number remain to be constructed on this system, His Honour has agreed for the sake of uniformity to allow these to be completed on the same general plan, only modifying some of the details.

16. *Guards.*—The total strength of the warder-guard now stands at 1,607 men of all grades. The system by which a small monthly sum is deducted as security from the salary of each warder was continued during the year, and is reported to have an excellent effect on the men. The new organization referred to in last year's Resolution, by which every warder on first appointment in the department has to serve in a central jail, was worked throughout the year with success, and Dr. Lethbridge unhesitatingly expresses the opinion that this arrangement has improved, and will, in future, very materially improve the discipline and efficiency of the warder guard. The loss of efficiency in the guards of central jails, which might be expected to result from this system, has, as far as possible, been avoided by keeping the best warders of the higher grades at the central jails, and by insisting that before admission to the permanent establishment at a central jail, every warder shall have undergone a period of

training and probation as an apprentice on subsistence allowance in a district jail. An important point in connection with this reorganization scheme is the uniting of all the head-warders and warders of the jails affiliated to one central jail into one establishment. On this subject Dr. Lethbridge writes as follows:—

"I trust I may be pardoned if I take this my last opportunity of referring to this subject, to bring prominently to notice one important and essential feature which should never be lost sight of in the working of this system. The head-warders and warders of all the jails affiliated to a central jail must be made to know and appreciate the fact that they belong to one establishment; that all the appointments in that circle are open to them; and that the Superintendent of the Central Jail has the power, on the recommendation of their immediate superior, to promote them to any vacancy in a jail in that circle, to which their standing and good services give them a claim. The promotion board which has been devised for this purpose enables the Superintendent of a Central Jail to consider the claims of each warder, but the fact that such a record exists does not satisfy the warders in distant jails that their claims have received consideration when promotions have been made, because the men are usually not aware of their standing on the promotion board, or of their prospects of advancement. To remedy this defect, I have ordered that a copy of the promotion board should be made in the vernacular and sent to each jail every half-year to let the men see how they stand, what promotions have been made, and what the prospects are before them. What the Civil List is to young civilians, this copy of the promotion board will be to warders—a constant stimulus to good work and an assurance that their claims are not neglected because they happen to be working in some district away from head-quarters. But this is not all; the warders must be satisfied that the changes which they notice in the last copy of the promotion board have not been made in a haphazard fashion, and have not been due to favouritism or to the fact that men promoted had been serving under the immediate notice of the dispenser of patronage. To make this quite clear, and to give the warders confidence in the system, the grounds on which a man has been passed over must be stated in the column of remarks. Such explanations as "Illiterate," "Not recommended by his Superintendent," "Punished during the half-year," will be quite sufficient to show the warders that the claim of each man for promotion has received consideration. On the other hand, if a warder is promoted out of his turn, the special service for which this promotion has been given should be detailed as an incentive to others to follow his example. I am satisfied that any extra work that this further development of the system may entail will result in greater efficiency, and will make the service more popular than it has been."

His Honour notices with approval these arrangements as likely to create a zealous spirit in the warder guard establishment. The difficulty of explaining to native subordinates the grounds of promotion is one universally felt even outside the Jail Department, and Dr. Lethbridge is to be congratulated on having devised this method of dealing with it.

17. *Escapes.*—There were 21 escapes of convicts as compared with 13 in 1890. Of these, two were from central jails, seven from district jails, four from intermediate jails, and eight from subsidiary jails. Fifteen of the 21 were recaptured during the year, besides four who had escaped in previous years. These figures in connection with the daily average convict population of jails and subsidiary jails are thus compared with the figures of other provinces for the latest years for which figures are available:—

Province.	1889.		1890.		1891.	
	Convict population.	Escapes.	Convict population.	Escapes.	Convict population.	Escapes.

Central Provinces ...	4,342	4	4,255	15	......	......

18. *Prison discipline.*—The number of offences committed by prisoners was 26,459 against 25,700 in 1890. The ratio of punishments to the daily average jail population fell from 191·1 per cent. in 1890 to 183·1 in the

year under review. The following table gives the statistics of punishments during the past seven years:—

	By criminal courts.	By Jail Officers.* Solitary confinement.	Reduced diet.*	Solitary confinement with reduced diet.	Corporal punishment.	All other punishments.	Total punishments.	Ratio per cent. of total punishments to daily average number of prisoners.	Ratio per cent. of corporal punishment to total number of all other punishments inflicted on male prisoners.
1885	71	3,333	2,486	472	347	42,081	48,790	354·65	0·73

* Including convicts put on penal diet.

In a separate table the figures of column 7, "All other punishments,*" are analysed as follows:—

Handcuffs	7,629
Fetters	8,840
Loss of marks	4,087
Gunny clothing	1,308
Penal or hard labour	686
Loss of early morning meal	345
Work in cells	10
Reduction and degradation of prison officers ...	515
Shaving the heads, and cutting the hair of female convicts ...	127
All other miscellaneous punishments	336
Total ...	23,883*

* Excluding 63 convicts punished in the subsidiary jails.

In future years, the Lieutenant-Governor desires that the information contained in these two tables may be combined in one statement.

19. *Convict officers and mark remissions.*—The total number of prisoners employed during the year as convict officers was 1,986, and the ratio per cent. of the average number of prisoners so employed was 5·80 for males and 0·37 for females. The Inspector-General reports that though the proportion employed is fairly small for the province, certain jails have not been well managed in this particular. The number of convict officers punished was 1,580 as compared with 1,629. Out of 1,661 prisoners released during the year, who were on the mark system, only nine failed to gain remission under it.

20. *Expenditure.*—The gross expenditure of the Department for the last ten years is shown in the following table:—

	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.

Average expenditure per prisoner ...	64 2 3	68 11 7	69 15 4	73 9 0	73 13 6	79 0 4	77 12 8	79 4 5	76 6 3	73 3 9
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Public Works Department ...	10,10,781	5,07,718	1,09,739	60,657	92,804	1,88,353	2,40,244	2,37,214	1,56,819	2,03,705

The increase under diet, hospital charges, clothing, and contingencies is accounted for by the increase in jail population. The decrease in the average cost per prisoner under all heads, excluding public works, from Rs. 79-4-5 in 1889 and Rs. 76-6-3 in 1890 to Rs. 73-3-9 in the year under review, is satisfactory. The Lieutenant-Governor finds nothing to take exception to in this table as a whole, and is glad to be able to record that the jails have, as a rule, been managed with economy and forethought.

21. The average prices paid for the principal articles of diet during the past two years are noted on the margin, and, as remarked by the Inspector-General, they show that by a judicious use of the system of buying the bulk of the cereals required at the cheapest season of the year, it has been possible, in a year of exceptionally high prices, to keep the rates almost down to what they were the previous year. The Lieutenant-Governor regrets, however, to have to notice that in some cases a great want of common sense was shown as regards the purchase of sufficiently large quantities of grain at the proper season, sometimes from ignorance of the resources of the market, and in one case at least from fear of the responsibility for safe storage. The judicious working of the storage system, and the better use of the jail gardens for growing food-grains, are the chief measures which can be relied on for reducing jail expenditure, and His Honour trusts that he may not again have to notice any failure in the former respect.

	1891.			1890.		
	Rs.	A.	P.	Rs.	A.	P.

The most expensive jails are those placed at the top of the list. At Naya Dumka there is every reason to expect improvement in future under the superintendence of Dr. Kelly, one of the most economical Superintendents in the Department. At Midnapore the high cost is due to the better diet given to the prisoners under medical advice; while in the Alipore Jail, where the cost has fallen from Rs. 27-14-6 in 1890 to Rs. 26-3-2, the high price which still prevails is due to the want of storage accommodation. The cheapest jails in

the province are Gaya, Bankura, Malda, Puri, Purnea, Monghyr, and Saran in the order named. The results at Gaya have been obtained, under the management of Jailor Lal Behari Singh, by cultivating the jail land to the best advantage, and by the maintenance of a good dairy. At Bankura, Dr. Mukerji and Assistant Jailor Dilaruddin Ahmad managed to store rice at Re. 1-10 per maund, the cheapest rate obtained in any jail in the province. Dr. Lethbridge also mentions as worthy of special commendation the work of Dr. Kelly and Assistant Jailor Jodunath Mazumdar at Malda. In the Presidency Jail special attention was paid to the storage of grain, and the result has been a decrease in the cost per prisoner from Rs. 28-0-6 to Rs. 23-14-9, a result which reflects great credit on the Superintendent, Mr. Donaldson. Dr. Basu has the credit of having made the largest reduction in the province under this head, expenditure in the Mymensingh Jail having fallen from Rs. 28-2-2 in 1890 to Rs. 23-12-6 in the year under review.

23. Altogether, in spite of the rise in prices, out of 47 jails, 29 show a reduction in the cost of diet per prisoner. In the following jails only was there an increase exceeding 8 annas:—Shahabad (Rs. 4-11-10), Patna (Rs. 3-1-1), Champaran (Rs. 2-2-9), Jalpaiguri (Rs. 2-1-1), Muzaffarpur (Rs. 2-0-3), Bhágalpur (Rs. 1-13-3), Darbhanga (Re. 1-10-10), Bogra (Re. 1-1-8), Lohardaga (annas 15-6), Saran (annas 11-1), Dinajpur (annas 10-9), Pabna (annas 10-7), and Manbhum (annas 10-2). The average expenditure per prisoner for diet throughout the province was Rs. 22-12-10 against Rs. 23-15-5 and Rs. 25-14-7 in 1890 and 1889 respectively.

24. *Supply of vegetables and other products of jail gardens and dairies.*—The whole of the vegetables consumed by prisoners during the year were grown in the jail gardens, except in the case of the Midnapore and Mymensingh jails which purchased vegetables to the value of Rs. 210 and Rs 58 respectively. All condiments used for the diet of convicts were also grown in the jail gardens. In this connection the Lieutenant-Governor would wish to refer to the wholesome rule that every jail should contain in its gardens one lime tree for every prisoner within its walls. It will be interesting if in future years it is stated in the annual report of the Department in how many jails this ideal is realized. The total of the value of vegetables and dairy produce sold, Rs. 72,831, compares most favourably with the figures of 1890 (Rs. 53,747) and 1889 (Rs. 47,827). This remarkable increase is reported to be largely due to the development of jail dairies which supplied the jails during the year with milk to the value of Rs. 13,517. Dr. Lethbridge estimates the expenditure on the purchase of cows at Rs. 8,000, but no details are given as to the cost of maintaining the dairies. It is clear, however, that by the establishment of these dairies a supply of milk of undoubted purity is obtained at a very small cost to Government, which not only reduces considerably the cost of diet throughout the jails, but is invaluable in cases of sickness. The first prize offered by Government for the best managed jail dairy has been awarded to Babu Nauronga Marwari of the Buxar Jail, Jailor Lal Behari Singh of the Gaya Jail obtaining the second prize.

25. *Establishment, &c.*—Expenditure under the head "Establishment" rose from Rs. 3,78,895 to Rs. 3,84,825: hospital charges rose from Rs. 47,437 to Rs. 48,751: the value of clothing supplied increased from Rs. 53,667 to Rs. 55,444, and the expenditure on contingencies was Rs. 1,47,722 against Rs. 1,29,089.

26. *Av rage rate of controllable expenditure.*—The total average cost per prisoner on account of diet, hospital charges, and clothing together, which amounted to Rs. 34-13-11 in 1889 and Rs. 31-3-5 in 1890, was further reduced to Rs. 29-11-9 in 1891. The jails of Malda and Gaya show the best results. Buxar was as usual the cheapest central jail.

27. *Employment of prisoners, and manufactures.*—The chapter on this subject is a meagre one, consisting of 2½ pages only of printed matter, of which almost the whole is composed of the barest statistics. This side of jail administration is one to which the Lieutenant-Governor attaches great importance, and he would like to see it dealt with more fully in the reports for future years. From what Sir Charles Elliott has seen on his tours of inspection, he is persuaded that the jail policy of the past few years has tended, while taking special care of the health of the prisoners, rather to the neglect of the punitive side of imprisonment, that is, the labour question. In several jails His Honour found that

prisoners were altogether insufficiently worked, as the following extracts from the inspection notes written at the time will show:—

Mymensingh Jail.—"The arrangements for labour are not at all satisfactory. With so large a force (372 convicts to-day) something valuable should be done. Yet the cash receipts of 1890 were only Rs. 2,264. The labour is divided between many objects—pounding surki, husking paddy, making bamboo mats and twine, oil-mills, garden work, &c. In the cold weather they make bricks. If nothing better can be devised, they should be employed on some big public work—embankment, drain, or such like. It is a sin to waste such a valuable labour force in this way."

Backergunge Jail.—"The great difficulty here is employment. Only 129 out of 397 rigorous imprisonment cases are employed on real labour, and of these 41 are only spinning jute which is women's work. More effort should be made to find hard and more profitable work. But there is certainly a danger here in avoiding the greater evil of high mortality of falling into the lesser evil of under-working the prisoners. The good jail officer is he who avoids either extreme."

Gaya Jail.—"Everything is satisfactory except one point, that of employment. In this respect it is the worst jail I have ever seen. A few men are at the oil-mills, and a few grind wheat for jail consumption; but the greatest portion are employed on the lightest form of women's work, spinning grass into twine. It is absurd to call this labour at all. I think I could see throughout that there is too strong a desire to make things easy and pleasant for the prisoner, owing, perhaps, to the great death-rate of some years ago. Active measures should be taken to invent new sources of labour. The Magistrate says he has arranged for starting stone-breaking again. The stone should be of the best, and if no exception is taken to its quality, the District Engineer should utilize it at the same rate, instead of paying a contractor for hired labour. Brick-making might be tried. The police are building reserve lines and hospital close by with bricks supplied by the Public Works Department, *i.e.*, made by hired labour, instead of by the jail. I found a lot of men making twine, with regard to whom it was urged that they could not be put to any other work, because the Jail Code says that no one should be put to hard labour for his first month. I think this should be modified. It might run that a full task of hard labour should not be exacted in the first month. But able-bodied men should not be put to women's work under the cover of this rule."

These admonitions have not fallen on unfruitful ground. Experiments have been made by Dr. J. H. T. Walsh, Medical Officer of the Presidency Jail, on the effect of exercise and enforced labour on weakly constitutions. The following extract from his report on the subject is full of interest and worth reproducing:—

"As the outcome of this forced muscular waste, there is increase in tissue hunger and tissue respiration, which allows, and indeed compels, the patient to take in and digest large quantities of food; thus causing increase of weight and great improvement in muscular vigour and health generally. From such cases as are here alluded to it is only a step to those in which the patient, though in poor health, is able to move about and use his limbs. It must be understood that I exclude from the category of persons suitable for these experiments all those suffering from marked organic disease of the heart, lungs and kidneys. The starved, the anæmic and the dispeptic form a very large proportion of all jail populations, especially in Bengal, where the standard of health is low. As a rule such subjects, when punished by imprisonment, have been allowed to do very trifling tasks, and have been, so far as production is concerned, practically placed among the sick. During the year 1891 I selected 129 such cases and placed them on hard work with the following results:—121 improved in health and gained weight, 2 lost weight and had to be kept on light work, 2 being somewhat old were ultimately placed in the convalescent gang as much improvement could not be hoped for in such persons, 2 neither lost nor gained; and finally, of all these weakly persons only two are registered as having been admitted into hospital. One of these was admitted for periostitis, not in any way caused by the work he was doing. The second man was placed on hard work, *dhenki*, on the 30th November. He then weighed 88½lbs. He worked on until the 21st December and weighed 90lbs. He then got diarrhœa and was admitted into hospital. All the men selected were admitted in "bad" or "indifferent" health, and all these cases have been kept carefully under observation by the Civil Hospital Assistant and by me, and a register has been kept showing the weekly gain or loss in weight. I must point out that for the first week or so a full task must not be expected, and also that some forms of labour are much better to begin with than others. I have generally commenced with the *dhenki* or with *dall-grinding*, passing on afterwards to *wheat-grinding*, *hand-press* or *oil-mill*. It is hardly necessary to mention that the convicts do not show any desire to assist in these beneficial experiments, and in some cases it has required firmness in insisting on the tasks being performed."

The results of Dr. Walsh's experiments seem to the Lieutenant-Governor to be of much importance. While great improvement has taken place in the mortality ratio, the importance of which cannot be overrated, the generality of Superintendents are reluctant to enforce a proper amount of work on the part of the prisoners, for fear that such work should have a prejudicial effect on their health. The above observations on the health-giving effects of moderate

labour, which agree with those of the Famine Commission in the case of starving people, are therefore most valuable, and should be known as widely as possible.

His Honour has issued orders for the employment, as far as possible, by the Public Works Department, of prisoners for such works as brick, tile, and surki manufacture, coolie labour to assist skilled workmen, earthwork of all kinds, and stone and brick breaking, and trusts that by this means the valuable labour-supply contained in the jails may be turned to greater profit than has hitherto been the case.

The average number of prisoners under sentence of labour was 14,230 against 13,241 in 1890; of these, an average number of 729 were employed on unremunerative labour as compared with 491 in 1890.

28. *Earnings of prisoners.*—The profit on the manufacturing account during the last two years is as follows:—

	1891.	1890.
	Rs.	Rs.
Cash drawn from the treasury	8,91,321	8,84,267
Cash paid into the treasury	12,05,342	10,35,109
Difference or profit ...	3,14,021	1,50,842

No explanation is given by the Inspector-General of this remarkable increase in the profit from manufactures. The average profit per head from each labouring prisoner was Rs. 52-7 against Rs. 28-3 in the previous year.

His Honour regrets to observe that owing to carelessness in the working of the Rajshahi Jail, the Manager, Eastern Bengal State Railway, had to reject several consignments of the castor-oil supplied by that jail for the lighting of the Railway.

29. *Subsidiary Jails.*—The number remains unchanged at 86. Of these, only 9 were visited less than 70 times by the Superintendents, and Dr. Lethbridge reports an improvement throughout in the number of visits paid to these jails compared with the results of previous years. The total amount expended on subsidiary jail buildings was Rs. 64,272 compared with Rs 63,872 in 1890. The daily average number of convicts and under-trial prisoners in these 86 jails was 332·84 and 515·03, respectively, or a little less than four convicts and six under-trial prisoners to each jail. Of the 40 prisoners who escaped from subsidiary jails, eight were convicts, and of these five were recaptured. Of the 32 under-trial prisoners who escaped, 23 were recaptured.

The total cost of the subsidiary jails was Rs. 1,73,235, or, excluding public works, Rs. 128-6-9 per prisoner compared with Rs. 1,70,110, and Rs. 131-8-8, the corresponding figures for 1890. The total credits from manufactures in subsidiary jails amounted to Rs. 20,815, with a net profit of Rs. 3,198, against Rs. 19,340 and Rs. 3,127 in 1890.

30. *Water-supply.*—The Alipore Central Jail has been connected with the Calcutta water-supply during the year. A well is being sunk near the Midnapore Central Jail, the completion of which will, it is hoped, solve what has been a serious difficulty in the past. The well water used in the Arrah Jail, where cholera has appeared in July of each of the last two years, was found to be impure, and the Lieutenant-Governor has sanctioned the introduction of pure canal water for the use of the jail. For the Champaran Jail river water has to be carted for a distance of six miles. An attempt to introduce well water during the year was followed by much sickness among the prisoners, and the old system has been resumed. Arrangements have been made during the year by which the water in use in every jail where wells are the source of supply, or where the quality of the water is doubted, will be tested once a year by the Chemical Examiner to Government.

31. Dr. Lethbridge reports that Mr. A. D. Larymore, Superintendent of the Alipore Jail, has invented during the year a boiler which fulfils all the

necessary conditions, viz., (1) it will boil large quantities of water with a minimum expenditure of fuel; (2) the fact that the water is thoroughly boiled is made known by a steam whistle which continues for some minutes after the fuel is withdrawn; (3) the water is passed direct into the filter, thus avoiding all chance of contamination in handling. His Honour is convinced from what he has seen during his tours that most of the boilers in jails merely heat the water without boiling it. Mr. Larymore's invention has come in good time, and should be introduced without delay into all jails which show a large number of admissions to hospital from fevers and bowel-complaints.

32 *Mortality among prisoners.*—The following table shows the sickness and mortality of the jails for every year from 1863 onwards:—

Years.	Daily average number of prisoners	Daily average sick	Ratio per mille of daily sick	Number of deaths: From cholera	Number of deaths: From all other causes	Number of deaths: Total number of deaths	Death rates per mille of average strength: From cholera	Death rates per mille of average strength: From all other causes	Death rates per mille of average strength: From all causes	Remarks.
1863	16 463	847	51 4	[illegible]	1 223	1 501	21 5	74 3	94 8	All classes of prisoners (1863–1868)
1864	16 729	814	48 6	231	804	1,035	13 8	48 0	61 8	
1865	17 431	756	43 4	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	
1866	20 [illegible]	746	54 5	[illegible]	1 669	[illegible]	53 0	74 0	107 0

1881	[illegible]	873	52 8	[illegible]	1 014	[illegible]	5 1	[illegible]	[illegible]	
1882	[illegible]	849	53 3	171	933	1 084	9 5	58 6	68 1	
1883	14 776	729	49 3	68	701	762	4 1	47 4	51 5	
1884	14 868	724	48 6	62	678	740	4 1	[illegible]	49 7	
1885	14 926	773	51 7	157	730	887	10 5	48 9	59 4	
1886	14 573	648	44 4	40	513	[illegible]	2 7	34 5	37 2	
1887	12 017	[illegible]	44 7	20	[illegible]	[illegible]	1 7	31 4	33 1	
1888	13 614	631	46 2	132	482	614	9 7	35 8	[illegible]	
1889	14 371	605	46 4	132	555	687	8 8	37 0	[illegible]	
1890	14 700	580	39 4	33	443	476	2 2	30 1	32 3	
1891	15 859	610	38 5	52	439	491	3 2	27 7	30·9	
Total	502,738	21,312	42 3	4 500	24,034	28 534	8 9	47 8	56 7	
Average	17 336	735	42 3	155	829	984	8 9	47 8	56 7	

The death-rate is 1·4 below that of last year, which was itself the lowest on record—a result which is most satisfactory and should encourage Superintendents of Jails to continue their exertions in the direction of improved sanitation.

The jails in which the ratio of admissions to hospitals per mille of average daily population was highest were Purnea 99·8, Dinajpur 91·8, Chittagong 82·9, Dacca 72·7, Jalpaiguri 67·8 and Champaran 67·7. There were 81 cases of cholera with 48 deaths against 55 cases and 31 deaths in the previous year. Only seven cases of small-pox occurred. These were mostly of a mild type, and only one case terminated fatally. There were 23 admissions from cerebro spinal fever, of which 18 ended in death. Twelve cases and eleven deaths occurred in the Alipore Jail, six with four deaths at Bhágalpur, and five with three deaths at Rangpur. The Medical Committee has continued its investigations in regard to this mysterious and fatal disease, and has seen every case that has occurred in the Alipore Jail, but its final report has not yet been submitted.

33. The total number of deaths was 454. Of these, 444 occurred in jails other than subsidiary jails. Dr. Lethbridge points out that out of these 444 convicts who died during the year, only 150 were originally admitted to jail in good health. The following jails show the highest mortality—

Jails.		Death-rates from all causes per mille.		Death-rates exclusive of cholera per mille.	
		1891.	1890.	1891.	1890.
Purnea	...	131·2	22·3	131·2	22·3
Shahabad	..	104·9	148·4	21·0	15·6
Rangpur	...	94·3	86·8	69·7	86·8
Puri	...	91·2	27·7	76·0	27·7
Dinajpur	...	88·3	71·7	88·3	71·7
Saran	...	62·2	65·8	43 9	32·9
Jessore	...	45·9	43·3	45·9	43 3
Palámau	...	44·9	27·5	44·9	27·5
Muzaffarpur	...	43·6	34·7	30·5	34·7
Chittagong	...	42·9	22·1	26 8	22·1
Jalpaiguri	...	42·8	114·0	42·8	99·8
Lohardaga	...	42·1	27·3	42·1	27 3

Of the twelve deaths in the Purnea Jail, six were those of prisoners who were brought to jail in bad health, and were sent at once to hospital where they died a few days afterwards. In this jail 67 other cases had to be taken to hospital directly on their admission, and the general health of the district was exceedingly bad during the year. The high death-rate at Shahabad has resulted entirely from an epidemic of cholera, to which 12 deaths were due. Apart from this the death-rate was 21 per mille. In the Rangpur Jail there were six deaths from cholera, and in this jail out of 23 prisoners who died, 12 were admitted in bad health, 10 in indifferent health, and only one in good health. The Puri Jail is a small one, and a high death-rate is accidental, and due to six deaths from various causes. The Dinajpur Jail is situated in a notoriously unhealthy district, and of the 15 convicts who died in it, nine were admitted in indifferent health and four in bad health. In Saran there were five fatal cases of cholera.

34. In paragraph 25 of the Resolution on last year's Jail Report, it was ordered that in all jails where the death-rate exceeded 60 per mille a separate and special examination should be made by a Committee consisting of the Superintendent of the Jail and three neighbouring Civil Surgeons with a view to ascertain the causes of the mortality. The Lieutenant-Governor is not aware that any action has been taken upon these orders beyond circulating them to Superintendents of Jails. This is obviously a very insufficient compliance with the orders of Government, and His Honour expects that Dr. Comins will at once take steps for the appointment of a Committee to enquire into the sanitary condition of the Purnea, Rangpur and Dinajpur jails. It would be well to deplete these jails as far as possible, transferring all but the shortest term prisoners to more healthy prisons, if room can be found for them there.

35. *Inspections.*—During the year the Lieutenant-Governor himself inspected 28 jails, and in the case of 10 of these recorded notes of the result of his inspection. The Inspector-General inspected 31 jails, 6 subsidiary jails, and the 2 reformatory schools at Alipore and Hazáribágh. Mr. Larymore, during the time he was in charge of the Department, visited 15 jails. The number of inspections by judicial and magisterial officers increased from 1,931 in 1890 to 2,145 in 1891; those made by non-official visitors, however, fell from 144 to 137.

36. *Officers of the Department.*—Dr. Lethbridge cordially acknowledges the value of the services rendered by the officers of his Department, and it is very satisfactory to Government that an officer of such experience and insight into character should be able to speak in this way of so large a number of his subordinates. In this Resolution it is possible to mention only a few names, but among jailors the Lieutenant-Governor notices with pleasure the high testimony borne to the services of Messrs. O'Connell and Donelan and Babu Nauronga Marwari, and among Deputy Superintendents of Messrs. Fox, Petty and Dobson. The following Superintendents received special mention:—

Superintendents of District Jails.

Dr. E. G. Russell.	Dr. U. C. Mookherjee.
" E. J. Manook.	" D. Basu.
" C. M. Russell.	" D. G. Crawford.
" J. M. Zorab.	" G. Jameson.
" K. D. Ghose.	" N. P. Sinha.
" E. Bovill.	" H. W. Pilgrim.
" H. W. Hill.	" R. S. Ashe.
" F. R. Swaine.	" R. M. Blaker.
" R. Macrae.	" J. Kelly.

Superintendents of Central Jails.

Mr A. D. Larymore.	Mr. C. H. C. Sevenoaks.
" W. Leonard.	" E. W. Payne.
" P. Donaldson.	" M. S. Emerson.
" W.a'C. Beadon.	

The thanks of Government are also due to Mr. Hanlon, Superintendent of Jail Manufactures, and especially to Mr. A. D. Larymore, the Deputy Inspector-General of Jails, who has carried on the duties of that appointment in addition to his ordinary work at Alipore, and has given much assistance in the administration of the department.

37. To Dr. Lethbridge himself the Lieutenant-Governor must again express his special thanks for the services he has rendered for so many years in the important office of Inspector-General of Jails. These services were acknowledged in the Gazette at the time Dr. Lethbridge made over his appointment, in terms which the Lieutenant-Governor is glad to reproduce as the concluding words of this Resolution—

"Surgeon Lieutenant-Colonel A. S. Lethbridge, C.S.I., M.D., whose services have now been placed at the disposal of the Government of India in the Foreign Department, has been employed under the Government of Bengal for a period of nearly fourteen-and-a-half years as Inspector-General of Jails. During this long incumbency he has justly won for himself the reputation of a most able and efficient Head of the Department, and his name will always be associated with the great improvements which, in recent times, have been effected in Jail administration in India. His merits have repeatedly been acknowledged by the Local Government and by the Government of India, and the Lieutenant-Governor cannot allow his transfer to another sphere of duties to take place without recording his sense of the valuable services Dr. Lethbridge has rendered to this Province."

ORDER.—Ordered that a copy of this Resolution be forwarded to the Inspector-General of Jails for information and guidance.

Ordered also that a copy of this Resolution, and a copy of the Report, be submitted to the Government of India in the Home Department.

Ordered also that a copy of this Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Offg. Chief Secy. to the Govt. of Bengal.

RESOLUTION ON THE ADMINISTRATION REPORTS OF THE ALIPORE AND HAZARIBAGH REFORMATORY SCHOOLS FOR THE YEAR 1891.

No. 126P.D.

RESOLUTION.

JAILS.

Darjeeling, the 28th May 1892.

READ—

(1) Letter No. 4236, dated the 26th April 1892, from the Inspector-General of Jails, forwarding the Administration Report of the Alipore Reformatory School for the year 1891.

(2) Letter No 4235, dated the 26th April 1892, from the Inspector-General of Jails, forwarding the Administration Report of the Hazáribágh Reformatory School for the year 1891.

Read also—

The Reports for the year 1890, and the orders of Government recorded thereon.

The Alipore School.—The average daily number of boys in the Reformatory rose from 116 in 1890 to 142 in 1891. There were 38 admissions during the year, and 21 releases and 2 deaths. The average number of punishments to each boy fell from 1·02 in 1890 to 0·66 in 1891, and the offences for which they were imposed are reported not to have been of a serious character. This, in view of the large increase in the number of boys, is very satisfactory.

The average number entitled to marks fell from 89·73 to 82·16, and the weekly average money reward from Rs. 3-9-5 to Rs. 3-2-9. The average number of admissions to hospital was 2·52 against 2·78 in 1890. There were two deaths, one from cholera and one from accidental poisoning, due to drinking an antiseptic solution under the idea that it was brandy. The Civil Hospital Assistant, through whose carelessness the accident occurred, was censured and removed from the charge of the Reformatory Dispensary. Three boys escaped from the Reformatory on the 8th April 1891 by scaling a wall, but were recaptured within a few days.

2. Quarters for the Civil Hospital Assistant were added to the Reformatory during the year, but no other building of importance was undertaken. It is, however, reported that more workshops are needed. The arrangements for the work and recreation of the boys continued the same as in past years. An hour's gymnastics has recently been introduced into the day's routine, but sufficient time has not yet elapsed to make any estimate of its effects possible.

3. Reports regarding 65 boys were received from Magistrates during the year. Of these 11 had been reconvicted, two bore a bad character, two had died, and 50 bore a good character. Out of 242 boys released since the opening of the institution, 37 have been reconvicted, 41 have been reported as bearing bad characters, and 164 as bearing good characters. It is, however, disappointing to notice that only 27 follow the trade learnt in the Reformatory.

4. The total expenditure of the school rose from Rs. 13,988-8-4 in 1890 to Rs. 15,776-5-6 in 1891. The average cost per head fell, however, from Rs. 119-9 to Rs. 111-1-6. The average expenditure per head on fixed establishment and diet fell from Rs. 71-10-8 and Rs. 33-11-3 to Rs. 61-10-10 and Rs. 32-10-3 respectively. These reductions are satisfactory, but, in the Lieutenant-Governor's opinion, the cost of diet is still unduly high. The cost per head in the Alipore Central Jail is only Rs. 26-3-2 a head, and there appears to be no reason why the diet of boys should cost more than that of men. Arrangements should be made for storing supplies of grain in the Reformatory at the cheapest season of the year as is done in the jails. The price paid for rice, Rs. 3-0-5 per maund, was unnecessarily high.

5. From the table showing the results of manufacture it would appear that the profits of the manufacturing department amounted to Rs. 10,235-12-5 against Rs. 9,901-13-4 in 1890. The figures for that year, however, took into

account, on both the credit and debit sides, the value of raw material in stock and of plant and machinery. The omission of these figures in the present table prevents any accurate comparison between the results of the two years.

6. Arrangements have recently been made by which selected boys will be instructed in the technical work of printing, such as setting up and distributing type, the printing work of the institution having hitherto been confined to the purely mechanical processes. It has also been arranged that some of the Burmese convicts in the Alipore Jail should instruct the boys in wood-carving These arrangements were not, however, brought into effect during the year under review.

7. The question of the unduly short terms for which many little boys are sent to the Reformatory has been brought to the Lieutenant-Governor's notice. His Honour understands that this question has been dealt with in the report of the Prison Conference, and will take no action in the matter pending the issue of orders on that report. He desires, however, to call the special attention of all Magistrates to the standing orders on this point, and hopes that he may not have to find fault in this particular in future.

8. The Lieutenant-Governor visited and inspected the institution on the 16th January 1892, and was thoroughly satisfied with all he saw of its management. His Honour is glad to notice that the Board of Management again speak in favourable terms of the manner in which Mr. C. J. Courtenay carried out his duties as Superintendent.

9. *The Hazáribágh School.*—The daily average number of boys in the school was 296·10 against 280·7 in 1890. Seventy-eight boys were admitted during the year, 67 were released, and one died. Discipline was on the whole good, and only 219 punishments were inflicted against 308 in 1890. A serious attack was, however, made on the Deputy Superintendent by two of the boys, instigated by a prisoner sent from the Bhágalpur Jail to teach carpet-weaving. The Deputy Superintendent was fortunately able to defend himself successfully, and the offenders were suitably punished. The daily routine of the school is the same as in previous years. The Lieutenant-Governor would be glad to see something done towards the introduction of gymnastics here, as in the Alipore Reformatory School. The monthly average number of boys earning marks was 270·5, and the average weekly earnnig Rs. 10-1-4. The corresponding figures for last year were 273·66 and Rs. 10-11-11. The year was an exceptionally healthy one—there were only 58 admissions to hospital and one death—and the daily average number of sick was only 2 54.

10. The total expenditure of the school was Rs. 83-3-9 per head against Rs. 75-4-11 in 1890, or, omitting outlay on building, Rs. 70-8-5 against Rs. 69-5-7. The Lieutenant-Governor notices that there was an increase in the expenditure per head under all the three controllable items of expenditure—diet, clothing, and contingencies, while higher prices were paid than in the previous year for rice and 'atta.' The average expenditure per head on diet was Rs. 27-15-9 against Rs. 25-11-5 in 1890. The corresponding figure for the Hazáribágh Jail was only Rs 18-2-11. The Lieutenant-Governor cannot consider these figures satisfactory. He hopes that during the current year greater economy may be exercised by a judicious storing of food-grains at harvest time. A workshed and 25 cells were built during the year. The results of the working of the Manufacture Department were that the amount paid into the treasury was Rs. 3,979-8 and the value of goods supplied to the General Department and to other departments was Rs. 4,435 and Rs. 2,900-3-4 respectively, while the total profits amounted to Rs. 2,661-12-9.

There was no noticeable change in the employment of the boys, but the Lieutenant-Governor is of opinion that book-binding and cane-work might with advantage be taught.

11. Reports regarding 90 boys released from the school were received during the year from Magistrates of districts. Of these 59 were reported as well-conducted, five were in jail, five were viewed with suspicion, and one had died; only one boy was reported as pursuing the trade learnt in the school.

12. For two months a serious spirit of insubordination prevailed among the warder staff, owing to recent orders with regard to the furnishing of security. Finally the head-warder was dismissed, and three warders resigned, and matters now appear to have settled down quietly.

13. The school was well-managed during the year, and its successful working does credit to Dr. Wilson, the Superintendent, and to Mr. Hill, the Deputy Superintendent, of whose services not only the Inspector-General of Jails, but all who have visited the school, speak in the highest terms.

ORDER.—Ordered that a copy of the Resolution be forwarded to the President of the Board of Management of the Reformatory School at Alipore for information and communication to the members of the Board.

Ordered also, that a copy of the Reports, and a copy of the Resolution, be forwarded to the Inspector-General of Jails for information and communication to the Superintendent of the Hazáribágh Reformatory School.

Ordered also that the Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Offg. Chief Secy. to the Govt. of Bengal.

CONSTRUCTION OF A BRIDGE OVER THE BRAHMAPUTRA AT NASIRABAD.

No. 105T.—M., dated Darjeeling, the 23rd May 1892.

From—H. H. RISLEY, ESQ., C.I.E., Offg. Secretary to the Government of Bengal, Municipal Department,

To—The Commissioner of the Dacca Division.

I AM directed to acknowledge the receipt of your letter No. 1020J., dated the 5th May 1892, forwarding a copy of a letter from the Collector of Mymensingh, in which he reports that Babu Jogendro Kisore Rai Chaudhri has offered to pay the sum of Rs. 30,000 towards the cost of erecting a bridge over the Brahmaputra at Nasirabad. You recommend that the acceptance of the offer by the District Board of Mymensingh may be approved.

2. In reply, I am directed to say that the Lieutenant-Governor has much pleasure in authorizing the District Board to accept the donation, and to request that you will be so good as to convey to Babu Jogendro Kisore Rai Chaudhri the thanks of His Honour for his liberality and public spirit. The correspondence will be published in the *Calcutta Gazette* for general information.

No. 1020J., dated Dacca, the 5th—9th May 1892.

From—C. F. WORSLEY, ESQ., Commissioner of the Dacca Division,

To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to forward copy of a letter from the Collector of Mymensingh, No. 346G., dated 2nd instant, reporting that Babu Jogendro Kisore Rai Chaudhri has offered to give the sum of Rs. 30,000 towards the cost of erecting a bridge over the Brahmaputra at Nasirabad (Mymensingh), and to recommend that His Honour the Lieutenant-Governor of Bengal may be pleased to approve of the District Board's acceptance of the offer, and to sanction the publication of this correspondence in the *Calcutta Gazette.*

No. 346G., dated Mymensingh, the 2nd May 1892.

From—H. A. D. PHILLIPS, ESQ., Collector of Mymensingh,

To—The Commissioner of the Dacca Division.

I HAVE the honour to state that Babu Jogendro Kisore Rai Chaudhri has offered to give the sum of Rs. 30,000 towards the cost of erecting a bridge over the Brahmaputra at Nasirabad (Mymensingh).

2. I have much pleasure in bringing this offer to the notice of Government. Babu Jogendro Kisore Rai Chaudhri bears a high character, and has always been esteemed by successive Collectors of this district. The present donation is one of many instances of his public spirit and liberality.

LIFE-BOAT AT GOALONDO.

No. 1284 Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Calcutta, the 30th May 1892.

RESOLUTION.

READ—

A letter from the Commissioner of the Dacca Division, No. 63T., dated the 20th April 1892, enclosing a copy of a letter from the Magistrate of Faridpur, stating that the Hon'ble Nawab Khwajah Ahsanullah, Bahadur, C.I.E., of Dacca, has promised to pay a sum of Rs. 900 or Rs. 1,000 for the purchase of a life-boat at Goalundo.

THE Hon'ble Nawab Khwajah Ahsanullah, Bahadur, C.I.E., of Dacca, has offered to contribute a sum of Rs. 900 or Rs. 1,000 for the purchase of a life-boat to be kept at Goalundo, and has requested that it may be called after his father, Nawab Sir Khwajah Abdul Gunny, Bahadur, K.C.S.I.

2. The Lieutenant-Governor is pleased to accept the Hon'ble Nawab Khwajah Ahsanullah Bahadur's liberal offer. The correspondence published below will show the necessity of keeping up a life-boat at Goalundo, and His Honour takes this opportunity to thank the Nawab for contributing towards such an useful object.

ORDER—Ordered, that the Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

C. W. ODLING,

Joint-Secretary to the Govt. of Bengal.

No. 63T., dated Camp Faridpur, the 20th April 1892.

From—C. F. WORSLEY, ESQ., Commissioner of the Dacca Division,
To—The Secretary to the Government of Bengal, Marine Department.

I HAVE the honour to forward copy of a letter from the Magistrate of Faridpur, No. $\frac{830}{XXIV-35}$, dated 19th instant, reporting the promise of a most liberal donation of Rs. 900 or Rs. 1,000 by the Honorable Nawab Khwajah Ahsanullah, Bahadur, C.I.E., for the purchase of a life-boat to be kept at Goalundo, and to recommend—

(1) That the Nawab's generosity and public spirit may be acknowledged by the Government;
(2) That a boat, as recommended by the Marine Surveyor in his letter cited by the Magistrate, may be purchased, and sent to Goalundo as soon as possible; and
(3) That orders may be issued for the despatch of the old life-boat from Goalundo to Calcutta in view to its sale.

2. I trust that the Government will continue to make such contribution as it has heretofore made for the maintenance of the boat.

No. $\frac{830}{XXIV-35}$, dated Faridpur, the 19th April 1892.

From—E. F. GROWSE, ESQ., Offg. Magistrate of Faridpur,
To—The Commissioner of the Dacca Division.

I HAVE the honour to inform you, in reply to your No. 393J., dated the $\frac{13th}{19th}$ February 1892, that I consider it very advisable to keep up a life-boat at Goalundo, as the figures given in the margin show that she has done very useful work during the last 8 years.

Lives saved.

1884-85	1885-86.	1886-87.	1887-88.	1888-89.	1889-90.	1890-91.	1891-92.
40	143	116	99	51	86	131	85

2. The Sub-divisional Officer of Goalundo has addressed certain zamindars asking for subscriptions towards a new boat, and I have also written letters to others with the same object, and I have much pleasure in reporting that the Hon'ble Nawab Khwajah Ahsanullah, Bahadur, C.I.E., of Dacca, has most generously promised to give a sum of Rs. 900 or Rs. 1,000 to buy a new boat, to be called after his father, Nawab Sir Khwajah Abdul Gunny, Bahadur, K.C.S.I.

3. I would therefore ask you to report the fact to the Government of Bengal, in the Marine Department, and ask that a boat, as recommended by the Marine Surveyor in his letter No. 133, of the 28th January last, to the address of the Secretary to the Government of Bengal, in the Marine Department, be purchased, and sent to Goalundo as soon as possible.

4. The Sub-divisional Officer informs me that hitherto the boat has been maintained as follows:—

A Serang is retained permanently at Rs. 15 a month, and from June till September a crew of Khalasis is entertained at a cost of Rs. 92 a month. The total cost has therefore been about Rs 548 a year; of this sum the Railway pay Rs. 150, and local zamindars another Rs. 150, and the remainder is paid by Government. I understand that there will be no difficulty in getting this sum always, but I would ask that Government be urged to guarantee the entire maintenance of the boat, in case local subscriptions should fail. It is possible that some of the other gentlemen who have been addressed may send donations, and, if so, these might be used to form a nucleus for a maintenance fund, but I do not like to be too sanguine of getting favourable replies.

5. As for the old life-boat, the Sub-divisional Officer reports that nobody will buy it at Goalundo, and I beg to recommend that it be sent to Calcutta for sale there.

DISTRICT ROAD FUND.

No. 2636R.C.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Road Cess.

Dated Calcutta, the 26th May 1892.

RESOLUTION.

READ—

Letter from the Accountant-General, Bengal, No. 1255L.F., dated he 25th March 1892, submitting n abstract of receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 31st December 1891.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees in Bengal for the 3rd quarter of the year 1891-92 be published in the *Calcutta Gazette*, and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette.*

Ordered also, that a copy of this Resolution, and of the abstract referred to, be forwarded to the Commissioners of the Rajshahi, Bhágalpur, Chittagong, and Chota Nagpur Divisions; to the Superintending Engineers of the Northern and Western Circles; to the Inspector of Works, Eastern Circle; and to the Financial Department of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

F. J. JOHNSTONE,

Secretary to the Government of Bengal.

O. T. BARROW,

Accountant-General, Bengal.

GOVERNMENT OF BENGAL, MARINE DEPARTMENT.

No. 43Mne., dated Calcutta, the 30th May 1892.

THE following report of the 19th quarterly inspection of the Dock Works at Kidderpore which are being carried out by the Commissioners of the Port of Calcutta, is published for general information.

By order of the Lieutenant-Governor of Bengal,

C. W. ODLING,

Joint-Secretary.

QUARTERLY INSPECTION OF KIDDERPORE DOCK WORKS.

Dated Calcutta, the 19th May 1892.

From—LIEUT.-COL. A. D McARTHUR, R.E., and J. D. DAVIES, ESQ.,

To—The Secretary to the Government of Bengal, Public Works Department.

AGREEABLY to the orders of the Government of Bengal received with Under-Secretary's letter No. 1161 Marine of the 11th instant, we have the honour to report that our inspection of the Kidderpore Dock Works for the quarter ending 31st March 1892 was made on the 17th instant.

It is unnecessary again to allude to the main works in detail, our report for the quarter ending 31st December last showing that all are in a complete state.

Works generally.—Additional water was pumped into the dock, full level being maintained. The dredging of the berms was proceeded with and has been nearly completed, so as to afford a minimum depth of 24 feet along the walls for the greater portion of their length. Further deepening will be carried out.

Four sheds on the west side of the dock were completed in every respect, and those to the east are rapidly approaching completion.

Great progress had been made in the minor details of work, such as compound walls, gates, railway sidings, and the clearing and finishing up of a large area within the walls.

The opportunity was afforded us of seeing the four sheds to the west lighted up with electric light. The lights were all in position and the effect very good.

Expenditure.—The total expenditure up to the quarter under review is reported to be Rs. 2,54,86,621-5-3, of which Rs. 2,29,02,442-2-9 represent outlay on works and Rs. 25,82,179-2-6 on account of land.

During the quarter under review the health of the workpeople was good. The daily average number of workmen employed was 4,267, among whom there were 4·6 per cent. deaths, thus showing a death-rate of 12·28.

Remarks.—The dock is now ready in every way for the reception of several vessels, but no berths have up to the present been utilized. The graving dock has, however, been in use.

We consider that the progress on the works in hand during the last quarter was satisfactory, and that, so far as we could judge, the quality of the work was all that could be desired.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 28th May, 1892.

Division	No.	District and date of return.	Rainfall at Sadar Station in inches	Character of the weather and state and prospects of the crops.
BENGAL.				
Burdwan Divn.	1	Burdwan May 28, '92 Katwa ... Raniganj ...	1·29 0·52 2 22	Weather—hot. Sugarcane transplanting almost finished. Ploughing general. Cattle in good condition and sufficient fodder. More rain wanted. Prices of common rice— Srs. Burdwan ... ... 13 to 16 } per rupee. Katwa ... ... 13 } Raniganj ... ... 14 }
	2	Bankura „ 28, '92 Vishnupur ...	3·71 4·03	Weather—much cooled down by recent rain and storm. The rainfall of the week has been sufficient for all agricultural operations. Supply of fodder and water now sufficient. Common rice selling at 14 seers per rupee at Vishnupur and 14 seers 1 chitak at Bankura. A flight of locusts passed over near the town of Bankura on the 16th instant. They came from the north-west and are reported to have eaten the young sugarcane leaves in places in outpost Chhetua
	3	Birbhum „ 28, '92 Rampur Hát ...	1·91 0·57	Rain has been general throughout the Sadar sub-division and has done much good. Ploughing is going on everywhere, and the ground begins to look green again. Prospects of fodder and water looking up. Price of rice from 12 to 15 seers per rupee.
	4	Midnapore „ 28, '92	1·13	Weather—hot; occasional showers of rain. Indigo doing well. Want of fodder and water felt everywhere. Prices of common rice— Srs. Sadar ... ... 13 } per rupee. Contai ... ... 13 } Tamluk ... ... 12 } Ghatál ... ... 13 }
	5	Hooghly „ 28, '92 Jahánabad ...	1·81 3·95	Weather—fair with occasional heavy storms of wind and rain. Sowing of rice and jute has begun in some parts of the district, but more is unsown for want of rain. Fodder-supply adequate. Water-supply inadequate. Prices of common rice— Srs. Sadar ... ... 10 } per rupee. Serampore ... ... 10 } Jahánabad ... ... 13 }
	6	Howrah „ 28, '92 Ulubaria ...	2·00 1·61	Frequent rain storms; temperature fairly hot. Rain has improved prospects. Cultivation commenced. Condition of cattle good. Fodder and water-supply still inadequate. Rice 10 to 12 seers per rupee.
Presidency Divn.	7	24-Parganas „ 31, '92	3·52	Weather—cloudy and unsettled with thunderstorms. Temperature hot and oppressive at times. Rain has fallen throughout the district. Prospects have improved, but more rain is wanted. Price of rice 10 to 11½ seers per rupee. Cattle-disease reported from one village in tháua Baduria. Water and fodder sufficient.
	8	Nadia „ 28, '92 Kushtia ... Meherpur ... Ranaghat ...	0·13 3·51 0·96 1·62	Weather—very hot. Sowing of *aus* nearly completed. More rain wanted for the seedlings. Coarse rice selling at from 10 seers 10 chitaks to 13 seers 5 chitaks per rupee. Some deaths of cattle reported from Jibannagar thána. Supply of fodder and water good.
	9	Khulna „ 28, '92 Bágerhat ... Satkhira ...	2·99 1·48 1·77	Weather—hot with one or two cool days. Ploughing for *áman* and sowing of *aus* going on vigorously. Prospects of *til* and sugarcane favourable in Bágerhat. More rain wanted. Coarse rice selling at from 11 to 14 seers per rupee. Supply of fodder sufficient, and want of water less felt than a month ago.
	10	Jessore „ 28, '92 Jhenida ... Magura ... Narail ... Bangaon ...	2·55 1·11 2·66 0·97 2·22	Weather—hot with occasional showers. Sowing of *áman* and jute progressing, and that of *aus* and indigo nearly over. Prospects much improved by rain. Prices stationary. Fodder and water plentiful.
	11	Murshidabad „ 28, '92	1·15	Weather—hot and cloudy with occasional showers *Bhadoi* and jute lands are being sown. *Boro* paddy almost harvested. Fodder available for cattle. Common rice selling at 12 seers per rupee.
Chittagong Divn.	12	Chittagong „ 28, '92	1·11	Weather—seasonable. Prospects of crops good. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali „ 28, '92 Fenny ...	2·24 3·82	Weather—seasonable. State of *aus* paddy is good. Sowing of *áman* paddy has commenced. Fodder and water sufficient. No cattle-disease. Price of rice stationary.
	14	Tippera „ 28, '92	4·30	Weather—hot and cloudy. Sowing of *aus*, *áman*, and jute almost completed. *Til* and chillies being gathered. Prospects good. Cattle-disease decreasing. Prices stationary.
	15	Chittagong Hill Tracts. „ 27, '92	2·39	Weather—seasonably hot. Sowing in *jums* still going on. Paddy and other crops in *jum* progressing. Cattle-disease still prevailing. Common rice selling at 10 seers a rupee.

	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—concld.				
DACCA DIVN.	16	Dacca May 28, '92	4·89	Weather—hot, and rain at intervals with high wind. Jute and *aus* paddy thriving, but the latter has been partially damaged in low lands owing to sudden rise of the rivers. Fodder available. No cattle-disease. Common rice selling at 12 to 15 seers per rupee.
	17	Faridpur „ 28, '92	3·39	On Sunday (22nd) there was a heavy storm which did some damage to trees and houses. Weather hot and seasonable. All young crops doing well. Common rice sells at 12 seers per rupee at Goalundo, 13 seers at Madaripur, and 13½ seers at Sadar. Cattle doing well and at present get fodder, but rivers rising and fodder will gradually become more and more difficult to procure.
	18	Backergunge „ 28, '92	1·25	Weather—hot and cloudy. State and prospects of crops fair. Ordinary rice sells at from 10 to 13 seers per rupee. Fodder and water sufficient.
	19	Mymensingh „ 28, '92	6·79	Weather—very hot. Rain at intervals. Prospects of standing crops fair. In Netrokona subdivision *aus* and jute crops have suffered from heavy rain. Common rice sells at 13 seers per rupee. Supply of fodder and water sufficient.
RAJSHAHI DIVN.	20	Dinajpur „ 28 '92 Thakurgaon ...	0·88 4·34	Weather.—hot; cloudy and rainy at times. Standing crops doing very well. Weeding continues. Preparation of land for *haimanti* rice commenced in places. Price of rice, both at Sadar and Thakurgaon, stationary. Condition of cattle good. Fodder and drinking water available.
	21	Rajshahi „ 28, '92 Nator .. Nowgong ...	2·03 3·19 1·57	Weather—hot and cloudy. Rain is expected soon. *Aus*, *áman* and jute are all prospering well after the late rain. Condition of cattle good. Fodder and water-supply sufficient. Price of rice ranges from 11 to 15 seers per rupee.
	22	Rangpur „ 30, '92 Gaibanda ... Nilphamari ... Kurigaon ... Ulipur ..	3·29 7·07 7·17 4·66 11·51	Prospect of *aus* continues favourable. Price of common rice 11 to 14 seers per rupee. Fodder sufficient.
	23	Bogra „ 28, '92 Sherpur ... Naukhila ...	2·12 2·85 2·29	Weather—variable. Frequent storms with heavy rain. Average temperature below the normal. Standing crops promise well. Some of the *káon* planted in very low lands is suffering from the heavy rain. Ploughing for *áman* progressing. In some places the *aus* is almost ripe. Slight rise in the price of common rice, which now sells at 13 seers per rupee.
	24	Pabna „ 28, 92	2·08	Weather—cloudy, rainy and hot. Prospects of standing crops good. Weeding continues. Price of common rice rose to 12 seers a rupee. Condition of cattle good. Water-supply and fodder sufficient, except at Dulai.
	25	Darjeeling „ 28, 92	3·05	Weather—rainy with occasional breaks. *Aghani* sowings in nurseries going on. Jute, *bhadoi*, *bhutta*, *kagni*, potatoes, *chhota marua* and *fafar* progressing favourably. Fodder and water-supply sufficient. Some cases of cattle-disease in the hills.
	26	Jalpaiguri „ 28, '92	6·93	Weather—cloudy and cool though hot at intervals. Rain throughout the week causing damage to *bhadoi* and jute crops in places. Fair weather wanted. Price of common rice remains stationary. Fodder-supply still sufficient. Condition of cattle good.
BIHAR.	27	Monghyr „ 28, '92 Begusarai ... Jamui ...	0·30 Nil 1·15	Weather—hot and sultry; a slight shower on the 25th. Fields ploughed, but sowing not done for want of rain. Fodder and water getting scanty. Rice 10 to 12 seers per rupee.
BHAGALPUR DIVN.	28	Bhagálpur „ 28, '92 Banka ... Madhipura ... Supaul ...	0·33 0·08 1·46 1·20	Weather—hot with easterly wind. Rain has fallen, but more rain is needed in the affected tract in Supaul. *Bhadoi* and *aghani* much benefited. Cultivation good. Fodder and water for cattle sufficient. Prospects of crops favourable. Common rice 11 seers 6 chitaks per rupee.
	29	Purnea „ 28, '92 Kishanganj ... Araria ...	1·13 3·83 3·45	Weather—hot with occasional storms. Cooler and more rain in north than at head-quarters. *Bhadoi* crop and sugarcane doing well, and recent rain has been useful for indigo which was being scorched in places. *Aghani* sowings continue. *Kauni*, *cheena* and *mung* being harvested. Fodder and water sufficient. Prices of common rice— Srs. Sadar ... ... 11 to 13 } per rupee. Araria ... ... 12 to 13 }
	30	Malda „ 28, '92 Chanchal .. Shibganj ... Gajol ...	0·69 0·63 3·02 0·27	Weather—extremely hot and oppressive till this day (28th), when it has cooled down after a little rain. Sowing of *bhadoi* and harvesting of *boro* about to be completed. Average outturn of *boro* estimated to be not less than 12 annas. Yield of mango 8 annas. Supply of fodder ample. Ordinary rice selling at from 11 to 12 seers per rupee.
	13	Sonthál Parganas „ 28, 92 Deoghur ... Godda .. Jamtara .. Pakaur .. Rajmahal ..	1·83 0·86 0·60 1·93 2·51 0·36	Good rain everywhere except in Rajmahal, Godda and Deoghur. East and south winds with storms. The rain has improved prospects, enabling ploughing to begin and helping the sugarcane. More rain wanted everywhere, but specially in Rajmahal, Godda and Dumka. Fodder still scarce. Water-supply improved. Locusts passed over last week destroying indigo in Dumka. Price of rice ranges from 10 to 13 seers per rupee.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHÁR—*concld.*				
Patna Division.				
32	Patna	May 28, '92	0·45	Weather—hot. Lands being prepared for *bhadoi* sowings, but more rain wanted. The rain that fell during the week will do good to the standing crops of sugarcane and *cheena*. Water and fodder getting scarce in Barh sub-division. Common rice selling at from 10 to 12½ seers per rupee. No distress reported.
	Barh	...	Nil	
	Bihár	...	0·10	
	Dinapur	...	0·21	
33	Gaya	„ 28, '92	0·57	Temperature about normal, but air rather humid. Partial rain on 26th. Sugarcane kept going by irrigation, but reported to be suffering from drought in Nawáda. *Cheena* harvest nearly completed. Prices stationary. Common rice selling at 12 seers per rupee at Sadar. Cattle are suffering from scanty supply of fodder and water.
	Aurangabad	...	0·05	
	Nawáda	...	0·09	
	Jahánabad	...	Nil	
34	Shahabad	„ 28, '92	0·37	Weather—warm. Sugarcane doing well except that now the want of water is being felt. Millet and *boro* paddy are being reaped and yielding a fair outturn. Fodder and water-supply sufficient. Prices stationary.
	Buxar	...	1·15	
	Bhabhua	...	0·29	
35	Darbhanga	„ 28, '92	1·97	Weather—cloudy. The rain has done great good, but a little more is wanted, as many *char* lands are not yet sown. *Mung* looking well and early rice also, but the latter wants more rain. Land is being prepared for *bhadoi* crops. Fodder for cattle much freshened by rain, and water also more plentiful. Common rice 10 to 11 seers per rupee.
	Madhubani	...	1·03	
	Samastipur	...	0·50	
36	Muzaffarpur	„ 28, '92	1·35	Weather—cooler and often cloudy with occasional thunderstorms. The rain has been pretty general over the district, though it has been given by storms of more or less local character. Agricultural operations are beginning all over the Sadar sub-division and part of Sitamarhi. Price of rice has fallen in Sitamarhi, being in some places over 13½ seers per rupee; elsewhere also prices show an inclination to fall.
	Hajipur	...	0·26	
	Sitamarhi	...	0·95	
37	Saran	„ 28, '92	0·48	Weather—very disturbed; thunderstorms everywhere on 22nd, smaller local storms since. High east winds. Rain has freshened indigo and *cheena*, but more is wanted for preparing land for *bhadoi*. Common rice selling as follows:— Chapra ... ... 11 Srs. Siwán ... ... 11 Srs. Gopalganj ... ... 12½ Srs. } per rupee.
	Siwán	...	0·26	
	Gopalganj	...	0·90	
38	Champaran	„ 28, '92	2·89	Weather—hot; cloudy and stormy with high east wind. Fields are being prepared for *bhadoi* paddy, and other seeds are being sown. Standing crops have been slighty benefited by the recent rain Prices stationary. Fodder and water sufficient
	Bettiah	...	1·37	
ORISSA.				
Orissa Divn.				
39	Cuttack	„ 28, '92	0·21	Weather—unsettled with thunderstorms. Local showers in parts have facilitated agricultural operations, but the rainfall up to date is quite inadequate. Prices of food-grains rising. Common rice sells at from 11 seers 13 chitaks at head-quarters to 15 seers 12 chitaks in the interior. Fodder and water-supply scanty in parts.
40	Puri	„ 26, '92	Nil	Weather—seasonable. Rain in some parts of the district. More rain wanted. Harvesting of *dalua* paddy still continues. Miscellaneous crops good. Rice sells at from 10 to 14 seers per rupee.
	Pipli	...	0·43	
	Khurda	...	1·37	
41	Balasore	„ 28, '92	2·30	Weather—stormy. Rain has been more or less general throughout the district. It enables the raiyats to plough and will give fodder for the cattle. More rain is urgently required for drinking purposes. Rice sells at 12 and 13 seers per rupee.
CHOTA NAGPUR.				
South-West Frontier Agency.				
Chota Nagpur Divn.				
42	Hazáribágh	May 28, '92	0·87	Weather—very hot and somewhat unsettled. Mango 4 to 12 annas. Sugarcane doing well. Much more rain wanted for agricultural operations. Fodder and water scanty. Common rice selling at from 11 to 13 seers per rupee.
	Giridi	...	0·89	
43	Lohardaga	„ 28, '92	1·64	Weather—very hot and cloudy. More rain is wanted for ploughing land for *gora* paddy and *gundli*. Common rice selling at 13 seers per rupee. Fodder and water not sufficient
44	Palámau	„ 27, '92	0·16	Weather—somewhat cooler. Good showers in some parts, but general rain urgently wanted. Sugarcane thriving well. Common rice 13 to 14 seers per rupee. Supply of water and fodder very short; want of water badly felt.
45	Singhbhum	„ 28, '92	2·19	Heavy rain on 23rd and 24th and a heavy shower on 25th. Weather much cooler. Clouds hanging about. The rain has been general and has done immense good. Sugarcane doing fairly well; 8 to 12 annas crop expected. Mango crop poor except in Kolhan. Ploughing operations going on everywhere. Price of common rice stationary. Fodder and water-supply much improved by the late rain.
46	Manbhum	„ 28, '92	·78	Weather—much cooler; several storms during the week. The rain has facilitated ploughing operations. Price of rice 13 to 16 seers per rupee.
	Gobindpur	...	·79	

Erratum.—In the Weather and Crop Report for the week ending 30th April 1892, published in the Supplement to the *Calcutta Gazette* of 4th May, for the rainfall of "1·16" at Sitamarhi in the Muzaffarpur district read "Nil."

Published for general information.

CALCUTTA; REVENUE DEPT.,
The 31st May, 1892.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 28th of May 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. RAINFALL. Of week. Mean for district.	Of week. Normal mean. Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 31*st May* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 28TH OF MAY 1892.

AT the close of the previous week conditions had become disturbed over the greater part of the province from the formation of a feeble barometric depression over the western districts, and with these conditions local storms with rain were general in almost all districts. On the 22nd, or the first day of the present week, the centre of the feeble barometric depression changed its position to Chota Nagpur, where pressure was more than 0·15" in defect at Hazáribágh. The depression caused a very distinct tendency to a cyclonic circulation of winds round a centre to the east of Hazáribágh, and with the depression existing over the province, rather strong winds were reported in Bengal and at the head of the Bay. On the 23rd the depression had to a considerable extent filled up or had moved away from the province, but the barometric changes were very irregular, showing that the disturbed state of the atmosphere still existed. These irregular changes of pressure continued in Bengal on the 24th, but rather more important changes occurred on this day in the Bay, where a barometric depression appeared in the Andaman Sea, while there was also a tendency to low pressure off the South Orissa and Ganjam coasts. On the morning of the 25th, the wind directions in Bengal had become very irregular, and at a good many stations north-easterly winds were reported, showing slight indraught towards the Bay, and the feeble barometric depressions appeared still to exist off the South Orissa coast and in the Gulf of Martaban, but the pressure changes on this day in Bengal were small. On the 26th the two feeble depressions in the Bay filled up, and pressure distribution and wind directions became a little more normal, while on the 27th pressure rose slowly in Bengal and the distribution became practically normal for the day, and the winds also became of directions varying from southerly in the southern districts, though south-easterly, to easterly in the north of the province. On the 28th the pressure changes were comparatively small, though usually there was a fall, and pressure was again becoming below the normal particularly in Bihár, but winds continued fairly normal in direction on this day. For the greater part of the week, therefore, it will be seen that conditions were very decidedly disturbed in Bengal, though towards its close weather was more normal. Hence during the earlier part of the week local storms with rain occurred at almost all stations in the province, but towards the end of the week they became decidedly less numerous, and had practically ceased to occur in Orissa, Bihár, and Chota Nagpur, and over the greater part of East and South-West Bengal, though they were still rather numerous in North Bengal and the adjoining parts of North Bihár.

In the Bay the south-west monsoon current has been blowing fairly steadily and rather strongly throughout the week, and the barometric depression which occurred in the Andaman Sea and moved into the Gulf of Martaban and Burma in the middle of the week was probably formed in front of this current, for it gave exceedingly heavy rain to some of the Burma stations. During the week, therefore, the true south-west monsoon current has probably advanced well into the centre of the Bay and, as is usually the case, it is making itself felt first at the eastern stations.

Pressure.—The mean pressure for the week has been below the normal in all districts, the usual defect being from about 0·05" to 0·07", but the defects have been smallest at some of the northern stations, where at Rangpur, Purnea, and Darbhanga they equal only about 0·03." In Assam the average defect for the week has equalled 0·072", and it has been largest at Sibsagar, where it is 0·09."

Temperature.—Owing to the rather heavy rainfall during the week there has been a rather rapid fall of temperature, and the mean temperature of the province for the week is below the normal instead of above it, as has been the case for so long a time. The defect for the week in North Bengal and North Bihár equals about 4°, and elsewhere about 1° or 2°, and the mean temperature for the whole province has been 1·7° below the normal. In Assam the defect has been 2·1°.

Rainfall—Has been moderately heavy in all districts except South Bihár, where the fall is only about two-thirds of the normal amount. On the other hand, falls considerably in excess of the normal amounts are reported in East and South-West Bengal and North Bihár. Average falls of three to four inches have occurred in East and North Bengal, a fall of two inches in South-West Bengal, falls of an inch to an inch and-a-half in Orissa, North Bihár, and Chota Nagpur, and a fall of about two-thirds of an inch in South Bihár.

In most districts these falls have been fairly equally distributed, but in South Bihár, Shahabad, Gaya, and Patna have received very little rain, Monghyr has received very considerable amounts, and the Sonthal Parganas district a fall rather larger than the normal for the week.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 28th of May 1892:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1892.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; <, lightning lr. lightning reflection; ⌓, dew.

RESOLUTION ON THE FINAL REPORT OF THE SURVEY AND SETTLEMENT OF THE DUBALHATI ESTATE IN THE DISTRICT OF RAJSHAHI.

REVENUE DEPARTMENT—LAND REVENUE.

Calcutta, the 31*st May* 1892.

RESOLUTION No. 2167L.R.

READ—

A letter No. 350A., dated the 13th April 1892, from the Board of Revenue, with enclosures, submitting the final report of the survey and settlement of the Dubalhati Estate in the district of Rajshahi.

1. The Lieutenant-Governor is glad to record the pleasure with which he has perused this report. It contains much interesting information in a convenient form, and the intelligence displayed in dealing with the general economic condition of the raiyat reflects great credit on the Settlement Officer, Munshi Nandjee. No settlement report which the Lieutenant-Governor has previously seen so nearly fulfils his ideal of what such a report should be.

2. The necessity for undertaking these operations arose from protracted disputes between the late Raja of Dubalhati and his tenants, which were likely to culminate in serious disturbances. They were in conflict on almost every question* affecting the relation of landlord and tenant, and their respective rights in the land. They could not agree as to the rates of rent, or the standard of measurement, or the extent of occupancy rights. The raiyats were aggrieved by the levy of illegal cesses, and by the interference of the Raja with their marriage and social arrangements: the zamindari accounts were in a condition of chaos, and, in the uncertainty which existed as to legal rights,

both sides were prepared to appeal to force. Fortunately, wiser counsels prevailed, and it was determined to resort to the provisions of the Tenancy Act. The preparation of an accurate record was, however, under these conditions, a work of extreme difficulty. In many cases a raiyat was entered as paying rent for land which he did not hold, while he was holding land for which he paid no rent. There was no record in the Raja's office of mutations of holdings or sub-divisions of tenures, and, as a consequence, in many villages, the names of raiyats and the amount of their rents did not correspond with the entries in the khatians. The rents shown in some of the road cess returns of 1872 of which copies were in existence were much less than those shown in the returns of 1880. The raiyats relied upon the former, and the zamindar upon the latter. As a consequence, it was necessary to ascertain not only the existing rents, but by whom they were to be paid; and even after the rates had been determined by compromise, it was still a difficult task to prepare the jamabandi.

3. The property in question consisted of 8 estates borne on the tauzi, comprising 211 villages. The area surveyed and settled was 37,758 acres contained in 195 villages, in addition to which an area of 2,493 acres was cadastrally surveyed at the request of the Raja's agents, but was found not to belong to him; a further area of 1,543 acres was demarcated, but subsequently excluded from survey on the joint application of the Raja and his tenants as they had made up their differences. The survey by plane table was commenced in March 1888, and ended in March 1890. The settlement proceedings lasted from November 1889 to August 1891. The new rent-rolls were finally published in 1890-91, and took effect from April 1892.

4. The total cost of the survey and settlement has been Rs. 37,449-3-4, inclusive of Rs. 703-1-4 on account of the net cost to the estate of survey instruments; of this total, Rs. 5,025-10 have been realized on account of process fees, court-fees and copying fees, leaving Rs. 32,423-9-4 to be apportioned between the parties interested. The incidence of this sum on the total area dealt with, 41,794 acres, would be 12 annas 2 pie per acre, but on the 37,758 acres surveyed and settled it falls at the high rate of 13 annas 8 pie per acre. The settlement officer in paragraphs 172-178 of his report states that the cost of survey alone was less than 4 annas per acre, and explains the large balance of the charge as due to the extreme confusion into which rights and accounts had fallen, and the large number of disputes which had to be settled. He claims, and in the Lieutenant-Governor's opinion rightly claims, credit for having disposed of these disputes in a manner highly advantageous to the parties concerned. He decided 4,448 disputes in 3 years, besides conducting all the survey and settlement operations. Had these disputes been separately filed in a Munsif's Court, they would have taken longer, and have cost the litigants a larger sum.

5. The difficulties in the way had not been unforeseen, and both Mr. Phillips and Mr. Macpherson, successive District Officers, had estimated the cost at not less than 12 annas an acre. Indeed, protracted litigation might have indefinitely postponed the conclusion of the settlement and increased the cost to a corresponding degree, if a compromise had not been effected between the Raja and his raiyats, which afforded a guide and working basis for the Settlement Officer. Lengthened negotiations were required to bring about this amicable arrangement, to which the Lieutenant-Governor considers that much of the ultimate success achieved is due. His Honour desires to convey to Mr. Finucane and to Munshi Nundjee acting under his orders, as also to Mr. Phillips, his acknowledgment of their meritorious and successful efforts in this matter.

6. The Lieutenant-Governor is not quite clear as to the correctness of the calculations by which, as above stated, the sum of Rs. 5,025-10 is deducted from the gross cost of the settlement. If the wages of process-serving peons are included in the cost of establishment, the process fees are rightly deducted, and, generally speaking, whatever is collected in cash should be credited against the cash expenditure, but not what is collected in court fee or other stamps. If any considerable part of the Rs. 5,025-10 consisted of such stamp receipts, the calculation should be revised. The details of the total expenditure, Rs. 37,449-3-4, are not given, and it will be convenient if the Board prescribe that in future every settlement report shall contain an appendix giving these details.

7. The Lieutenant-Governor agrees with the Board and the Director that the Raj must pay the entire cost of the survey of lands held by the Raja as his own holding, and of the fallow lands recorded in his name, which are not in the occupation of any tenants. The objections which the Raja put forward in his petition are opposed to reason and quite untenable. With regard to service tenure-holders, the Director thinks that it would be unfair to charge any part of the cost to them as they are liable to be dismissed at any moment, and ejected from their land; but Sir Charles Elliott agrees with the Board that the contingency is not one on which much stress should be laid, and they must pay their share. The remaining cost will therefore be distributed as shown in paragraph 9 of the Director's report, subject to any revision of the divisible cost.

Of the Rs. 18,921-12-8 due from the Raja, a sum of Rs. 6,000 only has been paid by him, and the balance of Rs. 12,921-12-8 is still due.

Out of Rs. 13,501-12-8 falling to the raiyats' and tenure-holders' share, Rs. 10,838-8 are due from the raiyats, and of this sum Rs. 9,979-12-6 have been realised from them; the balance of Rs. 3,522-0-2 remains to be realised from them and from the holders of service lands.

8. The result of the settlement has been an increase of rent from Rs. 68,127-14 to Rs. 86,295-1-2½ or 26·8 per cent. Thus a single year's increase in the rental, Rs. 18,167, has almost recouped to the estate the whole cost it has incurred in the settlement operations. This increase is entirely due to more accurate measurement, there having been no increase in the rates. The average rent per acre is now Rs. 3-6-8, which is lower than the average rate found to exist in Muzaffarpur, Rs. 3-12. The Raj and the raiyats have therefore every reason to be satisfied; and, with reference to paragraph 188 of the Settlement Officer's report, the Collector is requested to watch carefully the progress of affairs, and to take such measures as may occur to him to prevent any wrong-doing on the part of the Raj which may lead to new difficulties.

9. Much useful and interesting information is contained in the Settlement Officer's report, regarding the economic conditions under which the agriculturists exist, the cost of living, the cost of cultivation, the average outturn of crops, the fixation of rent, and so forth. It was found that 93·405 per cent. of the tenants are settled raiyats with occupancy rights, 6·49 per cent. non-occupancy raiyats, and ·105 per cent. tenure-holders. The Settlement Officer observed a few cases of the transfer of occupancy rights, but the Raja made strong objections to the record of such transfer, on the ground that the custom of transferring the right of occupancy by sale did not prevail in his zamindari. It was true that some of the refractory tenants had recently sold their holdings without his knowledge in order to establish a custom in their favour, but he contended that such transfers were null and void, and the majority of the tenants admitted that he was not bound to recognize them unless made with his consent and registered in his office. The custom was therefore held not to exist.

The number and average area of holdings were found to be as follows:—

	Number.	
Tenure-holders ...	9	56 acres.
Settled raiyats ...	7,936	3 „
Non-occupancy raiyats ..	552	a little over 1 acre.
Under tenants ...	2,496	a little under 1 „

It is stated that raiyats sublet their holdings to a large extent on a system called *adi* under which the produce is divided equally between the raiyat and under-raiyat. It is difficult to conceive how this practice can exist when the area of holdings is so small as 3 acres.

10. The Lieutenant-Governor desires that in future every settlement report may be accompanied by an illustrative map on the scale of 1 inch to a mile, showing the situation and boundaries of the villages and the leading topographical features.

11. The interesting remarks contained in the report on the subject of the cultivation of ganja will be considered in the Financial Department of this Government.

ORDER.—Ordered that a copy of this Resolution be published in the *Calcutta Gazette*, and a copy forwarded to the Board of Revenue for information and guidance.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Secretary to the Government of Bengal.

ADMINISTRATION REPORT OF THE BENGAL METEOROLOGICAL DEPARTMENT FOR THE YEAR 1891-92.

THE following report is published for general information.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

The 7th June 1892. *Secretary to the Government of Bengal.*

THE Administration Report for the year 1891-92 is intended to give a brief statement of the more important events only of the year, for the full report giving details of the administration of the Department for the triennial period 1890-93 will be issued at the beginning of the following year 1892-93.

The Department has been under my control for the whole year, as I have been on duty throughout this period.

The changes in the administration of the Department during the year have been of minor character, and there have been few years recently where the alterations introduced have been so small; but though there have been no changes in the principles on which the Department has been worked, a number of small improvements have been introduced to make the previous arrangements work more smoothly.

Observatories.

The number of meteorological observatories submitting reports to the Bengal Meteorological Department on the 31st of March 1892 was 70, instead of 69 observatories reporting in 1890-91. The only addition made during the year is the voluntary observatory at Kalimpong; but even in this case the observatory was erected and the instruments were arranged at the close of 1890-91, though observations were not recorded until the 1st of April 1891.

These observatories are arranged under the following heads:—first class observatory 1, second class observatories 15, third class observatories 38, voluntary observatories 8, and observatories not directly under the Bengal Reporter, but submitting daily observations in connection with the storm signal service, 8.

The following table will show the names and distribution of the observatories in question:—

1st class observatory.	2nd class observatories.	3rd class observatories.		Voluntary observatories.	Other observatories reporting to the Department, but not under direct control of the Department.
Bengal. Alipore* ...	Assam. Dhubri. Sibsagar. Silchar. Bengal. Berhampore. Burdwan. Chittagong. Cuttack. Dacca. Darbhanga. Darjeeling. False Point. Hazáribágh. Patna. Saugor Island. Burmah. Akyab.	Bengal. Arrah. Balasore. Bankura. Barisál. Bhágalpur. Bogra. Buxar. Chaibassa. Chapra. Comilla. Dehri. Dinajpur. Faridpur. Gaya. Jalpaiguri. Jessore. Krishnagar. Malda. Midnapore.	Bengal (continued). Motihari. Muzaffarpur. Mymensingh. Naya Dumka. Noakhali. Puri. Purnea. Rampur-Boalia. Ranchi. Raniganj. Rangpur. Sirajganj. Burmah. Tavoy. Madras. Cocconada. Cuddalore. Gopalpur. Rangoon. Ceylon. Galle. Trincomallee. Madras. Masulipatam. Negapatam.

* Under the direct control of the Meteorological Reporter to the Government of India.

† This observatory is not under the control of this Department. It is under the direction of Mr. A. V. Nursing Row of Vizagapatam.

In the year 1890-91 the number of rainfall recording stations reporting to the Bengal Meteorological Office was two hundred and fifty-seven. During the year under review ten rainfall stations have been added, and the number now stands at two hundred and sixty-seven. The stations which have been added during the year are Acquapada in the Balasore district, Mohesreka in the Howrah district, Khiri, Ageaon, Ramnagar, Koath, Sekroul, Bassawan, and Manaharpur in the Shahabad district, and Pandra in the Manbhum district. In the case of the Shahabad district the stations named were formerly established in connection with the Irrigation Department, and through the courtesy of the Superintending Engineer of the Sone Circle, they now report to the Meteorological Office as well.

The number of rainfall recording stations in each of the districts of the Province is shown in the following statement. In the majority of districts the number of stations appears quite sufficient to give an accurate estimate of the rain falling over the area, and, so far as can be ascertained also, the stations are probably fairly representative of the country dealt with. The system of rainfall registration, however, would probably be improved if a few more recording stations could be established in such districts as Puri, Midnapore, Chittagong, Rangpur, Saran, Sonthal Parganas, Lohardaga, and Singhbhum:—

Number of rainfall recording stations in each district in Bengal, &c., on 31st March 1892.

District	Stations	District	Stations
Puri	7	Rajshahi	5
Cuttack	8	Malda	5
Balasore	6	Dinajpur	4
Midnapore	7	Rangpur	6
24-Parganas	7	Jalpaiguri	5
Howrah	3	Kuch Bihár	4
Hooghly	3	Darjeeling	5
Burdwan	5	Purnea	7
Bankura	10	Bhágalpur	7
Birbhum	5	Darbhanga	5
Nadia	5	Muzaffarpur	7
Khulna	5	Champaran	4
Jessore	5	Saran	3
Murshidabad	8	Shahabad	13
Chittagong	4	Gaya	9
Chittagong Hill Tracts	2	Patna	6
Backergunge	6	Monghyr	5
Noakhali	4	Sonthal Parganas	8
Faridpur	3	Hazáribágh	9
Dacca	5	Lohardaga	3
Tippera	9	Palámau	4
Mymensingh	9	Singhbhum	4
Pabna	2	Manbhum	7
Bogra	4		

267 stations in all.

Inspection of meteorological observatories.

Twenty visits of inspection to various meteorological observatories (excluding rain-gauge stations) under the Bengal Reporter have been made during the year by different officers of the Department, and in addition three informal inspections were made by the former Inspector of Observatories under this Department, who has lately been employed in Census work. Of this number four inspections were made by the Meteorological Reporter to the Government of India, nine inspections by the Bengal Reporter, one by the Madras Reporter, and the remainder (6) by the Inspector of Observatories or the Personal Assistant to the Meteorological Reporter to the Government of India.

The number of observatories inspected in 1891-92 has again been rather smaller than the average of former years; but, as pointed out in the report for the previous year, this is inevitable with the present arrangements. The Bengal Reporter, who is mainly responsible for the inspection of the Bengal stations, is also now responsible for warning the ports round the whole Bay of Bengal of the occurrence of storms throughout the whole year, and hence he can only leave Calcutta during brief intervals when severe storms are not expected. In

the second place, also, I am personally only a half-time officer as Bengal Reporter and can practically only leave Calcutta during the vacations of the Presidency College, which is an additional curtailment of the possibilities of my leaving Calcutta on meteorological inspection tours.

The following were the observatories under the Bengal Reporter inspected during the year :—

Arrah.	Darbhanga (twice).
Bankipore.	Darjeeling.
Bankura.	Dehri.
Berhampore.	Gaya.
Bhágalpur (twice).	Kalimpong.
Buxar.	Malda.
Chaibassa.	Muzaffarpur.
Chapra (twice).	Ranchi.
Cuddalore.	Raniganj (twice).
Cuttack.	

The general result of these inspections was that the observatories at Bankipore, Berhampore, Bhágalpur, and Kalimpong were found to be in excellent order; those at Arrah, Bankura, Buxar, Chapra, Darjeeling, Darbhanga, Gaya, and Raniganj (on the second inspection) were found to be in good order; those at Cuttack, Cuddalore, Dehri, and Malda were found to be in fair order only and not in very satisfactory condition, while Chaibassa, Ranchi, and Raniganj (on the first inspection) were in bad order.

Work at observatories.

The standard of work at the observatories generally throughout the year has been good, though there have naturally been exceptions, but, so far as can be judged, the quality of the work in 1891-92 has been quite equal to, if not superior to, that of former years.

First class observatory.—The only observatory of this class is at Calcutta (Alipore). It is not under the Bengal Meteorological Department at all, but is under the control of the India Reporter, and is in charge of the Second Assistant to the Meteorological Reporter to the Government of India, who is stationed at Calcutta throughout the year. The observations made at the Alipore observatory are, however, supplied daily to the Bengal Reporter; but as the observatory is not under the control of this Department, its working cannot be reviewed.

Second class observatories.—Five out of the fifteen observatories of this class were inspected during the year. At the time of the inspection of Bankipore the observatory was in excellent condition, and throughout the whole year 1891-92 the observer there has done very accurate work, and he has scarcely made a single mistake of any description. At Berhampore, also, at the time of inspection the observatory was in excellent order, showing the great care the observer always takes in his work, and his observations have also been quite accurate throughout the year. In the previous Administration Report reference was made to the fact that the Darbhanga observatory had been in an extremely unsatisfactory condition, and that the very strong measure of stopping the observer's pay for eight months had been resorted to. It is satisfactory that this has had the desired effect, and when the observatory was inspected in August 1891 and in March 1892, it was found in good condition. The observations submitted from Darbhanga during the year were also moderately satisfactory, though by no means of so high an order of accuracy as those from Berhampore and Bankipore. The Darjeeling observatory was also found in good order at the time of inspection, and the returns of observations on the whole have been accurate. When the Cuttack observatory was visited its condition was only fair, and some of the instruments were a little out of order. On the other hand, the observations submitted by the observer at Cuttack have on the whole been very accurate.

The remaining ten second class observatories not having been visited during the year, the only test of the nature of their working which can be applied is by a careful study of the observations that have been sent in to this office. Judged by this standard, Akyab, Burdwan, Dhubri, Hazáribágh, Saugor Island, Sibsagar, Silchar, and perhaps False Point, have sent in excellent results throughout the year, and have probably been kept in very good order

by their respective observers. Chittagong and Dacca during the year have sent in observations which were not quite so trustworthy, and a certain or perhaps considerable number of mistakes have been found in the registers received from these stations. On the other hand, in the Administration Report for the previous year it was stated that the observer at Chittagong had earned the reputation of making more mistakes than any other observer in Bengal. This, however, is by no means the fact in the present year, and hence the observer at Chittagong has clearly improved to a very considerable extent in the character of his work.

The thermometers on one occasion during the year were stolen from the thermometer shed at Hazáribágh, but the culprit was caught and sentenced to imprisonment.

Third class observatories (including the observatories at the coast ports of the Bay of Bengal directly under the Bengal Reporter).—Of these thirteen observatories were inspected during the year under review. The Arrah observatory at the time of inspection was found in fairly good order. The observer at that station was, however, a new man, and had never had any previous training in the work, hence his methods of observation were rather faulty, and some of the instruments were not in such good order as they ought to have been, but the observer was easily taught his work. Up to the time of inspection the errors of observation at Arrah were rather numerous, but since that time the observations received have been very accurate. Bankura observatory at the time of inspection was found in very good order, and the observations submitted from that station have also been very accurate. The main object of this inspection was to verify the apparently low readings of the barometer, which are submitted at certain times of the year from that station, and it was shown that the readings were accurately taken, and hence that from certain local peculiarities in this station, the barometer reads distinctly lower than at the stations in its neighbourhood even when differences in level, etc., are allowed for. The Bhágalpur observatory was inspected twice during the year, and on both occasions was found in good order; the observations also submitted from this station throughout the year have been excellent.

The Buxar observatory was inspected in October 1891 and was in fairly good order, though the anemometer was found to be quite useless. The accuracy of the observations submitted from the Buxar observatory (with the exception of wind velocities) was exceptionally good throughout the year. Chapra observatory was inspected twice during the year, and on both occasions was found in excellent order. The observations sent in to the Meteorological Office, however, have shown a little carelessness on the part of the observer, though the number of serious mistakes made was not so large as those of less importance. The Chaibassa observatory was inspected in August 1891, and was found in bad order, as several of the instruments were in a very dirty condition and could not possibly have given accurate results. The observations were also more or less inaccurate until November, and the observer had to be warned on several occasions and also fined; but these have had the desired effect, and since November fairly accurate observations have been received.

The Cuddalore observatory, which is one of the coast observatories established in connection with the Bay of Bengal storm signal service, was inspected by the Madras Reporter nearly at the close of the year 1890-91, but the inspection report was not received in time to be noticed in the last Administration Report. This observatory was also again inspected by the Madras Reporter in March 1892. In both cases the observatory was found to be in fair order, but owing to the local conditions of exposure of the instruments at Cuddalore the observations are only of moderate value. The observations, however, in themselves are generally very carefully taken by the observer, and they have been of considerable accuracy throughout the year.

The observatory at Debri was inspected in October 1891, but the condition of the instruments, &c., was not satisfactory, and from failure to attend to the instructions given a large number of erroneous observations were submitted during the year; in fact the number of errors made at the Dehri observatory was far larger than those made at any other observatory in the Province. At the time of inspection the condition of the observatory had been rather improved owing to the appointment of a new observer, but

notwithstanding this the observatory was still in rather unsatisfactory condition. During the last few months, however, the returns received from Dehri have been much more trustworthy than they were during the year 1891. Gaya was inspected once during the year, and the observatory was in satisfactory condition. The observer at Gaya, however, has sent in observations of only moderate character, and he has as usual made a good many mistakes. In former years he has, however, sometimes been quite the least trustworthy observer in the Department, but his record for the present year has very decidedly improved, and the number of mistakes made has, compared with previous years, been rather small. He had, however, to be warned very severely on several occasions during the year. Malda when inspected in August 1891 was in fairly satisfactory condition; the observations sent in during the year were good, and the mistakes made were not numerous. Muzaffarpur was also inspected once in the year, when the observatory was found in good condition. The observer seems still rather careless in his work, and he has made a considerable number of mistakes in the observations submitted to the Department during the year under review. In the Administration Report for the previous year it was noted that the Nellore observatory had been inspected by the Madras Reporter, but that the report of the visit had not been received in time to notice it. That inspection showed that the Nellore observatory was in excellent order, and for the whole of the present official year, up to February, the observations sent in were extremely accurate. Since the early part of February, however, the barometric readings have become quite untrustworthy, and the cause of this has not yet been satisfactorily ascertained. Ranchi at the time of inspection was in rather bad order; the observations sent in, however, have been fairly accurate throughout the year. The Raniganj observatory was inspected twice during the year—once in October 1891 and a second time in March 1892. For a part of the year the Raniganj observatory was in charge of the medical subordinate who had previously been at Dehri, where he had given great trouble from the inaccuracy, etc., of his work. During the period of his incumbency the Raniganj observatory was practically useless, as the observations were almost always wrong, and when the observatory was inspected during his charge, it was found, as was to be expected, in decidedly bad order, and it was also found that the observer was physically unfit to render good service in any Government department. The observer was then replaced by a new man, and on the second inspection the observatory was found in good order. For a large part of the year, therefore, the observations from Raniganj were quite untrustworthy, and the former observer was warned and fined on several occasions, but with no effect. This station and Dehri, indeed, were by far the worst meteorological stations in Bengal, but since December 1891 the number of mistakes found in the observations from these two observatories has been comparatively small.

The condition of the remaining third class observatories, which could not be inspected during the year, can only be judged by the quality of the observations sent in to the office. The observations thus submitted during the year have been of a very high order of accuracy at Bogra, Coconada, Jessore, Krishnagar, Madras (Port Office), Midnapore, Motihari, Mymensingh, Naya Dumka, Pamban, and Rampur Boalia. The observations have been good at Balasore, Gopalpur, Puri, Rangpur, Sirajganj, and Tavoy, and only moderately good at Dinajpur, Faridpur, and Jalpaiguri. On the other hand, the observations at Barisál, Comilla, Noakhali, and Purnea have been inaccurate and misleading, and the observers at these stations have had to be warned and fined.

In connection with the third class stations it deserves to be noticed that the thermometer shed at Gopalpur, which was commenced last year, has been completed, and that a new thermometer shed has been erected at Coconada, where hitherto there had been no shed at all.

Voluntary observatories.—Meteorological returns are also received from eight voluntary observatories. One of the most important under this class is Vizagapatam, where the observatory is under the direction of Mr. A. V. Nursing Row, who has continued to favour the Department with his daily observations, which are most accurately taken and despatched. On every occasion, also, on which extra observations have been asked for in connection with stormy weather in the Bay, Mr. Nursing Row has sent them most promptly, and hence the thanks

of the Department are again due to Mr. Nursing Row for his valuable help and co-operation. The Kalimpong observatory which was at first under the superintendence of the Reverend Mr. Sutherland, and afterwards under the Reverend Mr. Kilgour, was inspected in April 1891, and was found to have been erected in a very favourable site, and it was in good working order. The observatory has also sent in regular returns for the whole year, which appear to be accurate, and very valuable results may be expected from this observatory, which is the only one of about 4,000 feet elevation under the Bengal Meteorological Department. The thanks of the Department are therefore due to the gentlemen in question for their valuable co-operation in the work of meteorology. The observations made at Shortt's Island by Mr. Tasker have again been received regularly throughout the year, and they have been very accurate and very valuable. In particular, Mr. Tasker sent in a very complete and important series of observations taken before and during the severe cyclone of the beginning of November 1891, which will be very useful in working out the history of this storm, and thus Mr. Tasker has again placed the Meteorological Department under considerable obligations. The voluntary observatories at Tura, Demagiri, Gnatong, Lungleh, and Fort Tregear are carried out on rather a smaller scale, and they are under the superintendence of the medical officers in charge of these stations, who have sent in valuable sets of thermometric and other observations (except in the case of Fort Tregear) almost throughout the year, and the thanks of the Department are therefore due to these gentlemen. In the case of the Gnatong observatory it was at one time intended to equip it completely, but owing to doubt as to the length of time the station is likely to be maintained, only a couple of barometers were sent there during the past year in addition to the thermometers which had been previously supplied. Should, however, the station be permanently occupied, Gnatong, when fully equipped, would be one of the most valuable meteorological stations in the whole of the Indian area. The observations from Fort Tregear, which had ceased from February 1891, were recommenced from 21st October 1891, but they again ceased from November 1891.

The work at the observatories, the time of observation, and the nature of the instruments observed has been practically the same in the past year as in the previous year, and there have been no changes in this direction in the routine of the Department.

The system of awarding small sums of money as an additional remuneration to those observers who take and submit special meteorological reports during unsettled and stormy weather, has been continued during the present year by the India Meteorological Office, and many of the Bengal observers have competed for these rewards. The Bengal observers who have submitted the most valuable reports of this kind, and who have received the largest rewards, are those at Shortt's Island, Saugor Island, Puri, Burdwan, Balasore, Dhubri, and False Point.

Work at and inspection of rain-gauge stations.

The rain-gauge stations have on the whole worked satisfactorily during the year, and there have been few cases of complaint, and on the whole comparatively few mistakes have been discovered in the returns which have been submitted. It must be remembered that the rain recording officers receive no salary for this trifling work, and when it is considered that such various classes of officials, etc., as Civil Surgeons, clerks and other medical subordinates, schoolmasters, sub-postmasters, subordinate police and canal officers, rural registrars, etc., etc., are employed in this work, it will not be wondered at that in a few cases difficulties are met with. Thus, during the year the police officers at Gondwara, Matiari, Balarampore, Jhalda, Pupri, etc., who were in charge of the rain-gauges at these stations, having failed to give satisfactory and reliable returns, the rain-gauges have had to be made over to other officials, or even in some cases to private indigo factories, etc.

An important step was taken during the year in the matter of securing more accurate rainfall statistics by the introduction of a system of rain-gauge inspection. Rules for the guidance of local officers inspecting rain-gauges were prepared by the India Meteorological Office, and also post card inspection forms containing a few brief appropriate questions with spaces for the replies. The Government of Bengal in their circular letter No. 3T.R., of the 23rd June 1891, directed all District Officers to see that the rain-gauge stations in

their districts were inspected. The inspections were to be carried out whenever any station at which a rain-gauge was maintained was visited either by the Collector himself or by the Deputy Magistrate or the Civil Surgeon. Spirit levels to test the level of the mouth of the rain-gauges and measuring gauges to test the accuracy of the diameter of the mouth of the funnel were also provided to all inspecting officers who submitted indents for them. No less than 102 inspection reports of rain-gauges were received during the year, a number of which were submitted from the towns visited during the tours of His Honour the Lieutenant-Governor.

These reports brought to light a considerable number of cases of improper exposure of the rain-gauges, of defects in the instruments and in some cases in the mode of reading, and in one case of an entirely incorrect form of rain-gauge being used, and all such imperfections in the mode of registration brought to light in these reports have, as far as possible, been remedied. In a considerable number of cases also spare measuring glasses have been provided at the stations, so as to provide for accidental breakage.

At a considerable number of stations for some years past duplicate rain registration has been carried on, one rain-gauge belonging to the Revenue Department and the other rain-gauge being in connection with the local meteorological observatories. In those cases where the conditions of exposure of the two instruments appeared similar, and where the falls recorded were approximately equal, the revenue rain-gauges have been withdrawn during the year, and such has been the case at Gaya, Berhampore, Hazáribágh, Darbhanga, Bogra, Mymensingh, Sirajganj, Buxar, Patna, Burdwan, Raniganj, Bankura, Krishnagar, Jessore, Malda, Darjeeling, Rangpur, Purnea, Bhágalpur, Dumka, Motihari, and Dehri. The same form of duplicate registration is, however, still being carried on at a certain number of sadar stations, and will not be stopped until it has been ascertained that the falls are strictly comparable as measured in the two gauges.

Departmental Reports.

The short *Annual Report of the Meteorology of Bengal* in the year 1890 was prepared as usual and submitted on 9th June 1891 for incorporation in the Bengal Administration Report. It was illustrated by the usual number of charts.

The *Report on the Meteorology of Bengal for the monsoon season* of 1891 was prepared and submitted to Government on 23rd December 1891. It was also illustrated by maps. The report was published in the *Calcutta Gazette* of the 6th January 1892.

A short note on the rainfall in 1891 in certain districts of North Bengal and Bihár as compared with the normal rainfall, and with the rainfall in 1873, 1875, and 1888, was also prepared.

The *Monthly Meteorological Reports* for Bengal and Assam have been regularly published about the 10th to the 15th of the month following that dealt with. These reports give the full meteorological and rainfall statistics for Bengal, and the meteorological data only for Assam, together with a brief discussion and summary. Monthly charts of the rainfall distribution, its variation from the normal, etc., for the monsoon season were prepared and submitted to Government and to the Sanitary Commissioner. These monthly reports, &c., have been carried on without material change throughout the year.

The *Weekly Meteorological Reports* for the week ending 8 a.m. on Saturdays have been published regularly throughout the year. These reports give similar data and summaries to those contained in the monthly reports, but they are not quite so complete as the monthly reports, for the date of publication of the weekly reports (which is only four days after the actual measurements of rainfall, etc., have been made) will scarcely allow of the postal reports from the distant parts of East Bengal, Orissa, etc., being received and included in these reports. There has also been no practical change in the form of these reports during the past year.

The Daily Weather Report dealing with the meteorology of the inland stations in Bengal and in Assam was published during the period 26th of April to 16th November 1891. This report contained the observations made at 45 stations, and with the exception of some slight alterations in the periods of comparison of rainfall data, the report as published was similar to that of the previous year. Of this report 102 copies were issued daily to Government officers and 16 copies to private subscribers at the rate of Rs. 2-8 a month.

The Bay of Bengal Weather Report and Chart, in connection with the storm signal service, has been published daily, Sundays and holidays included, throughout the year. This report, which gives the 8 a.m. data for the Bay and neighbouring coast area, is usually ready for distribution between 10-30 a.m. and 11 a.m. It is issued to 42 Government officials free of charge and to 26 subscribers at the rate of Rs. 2 per month, and the subscriptions received during the year have been sufficient to pay the cost of the lithographic establishment, repairs to presses, &c., and at the end of the year there was a small balance in hand which is kept to provide new presses, &c., when required. No change was made in the form of this report during the year.

In connection with the two daily reports just alluded to, a considerable amount of discussion has occurred during the past year. The Committee of the Bengal Chamber of Commerce applied to the Bengal Meteorological Department, asking to be provided, as early as was possible in each day, with meteorological information dealing with the districts yielding commercial produce, and particularly with the tea and indigo districts. Arising out of this request, after considerable discussion, at the suggestion of this office a plan was formulated by which it was proposed to amalgamate the two daily reports, and to publish daily one report and chart only, dealing with the whole of the Bay of Bengal as in the chart now published and with Bengal (inland), Assam, Cachar, and Sylhet, the latter districts to be more fully represented by meteorological stations than they are now. To provide for the working of the storm signal service, it was also proposed to issue very early in the day small slips briefly describing the state of the weather in the Bay. It was pointed out to the Chamber that the change would involve additional cost for the establishment of new observatories, etc., and that no proposal could be made for its adoption by Government unless it was shown that the form of the proposed report would meet with general approval by the commercial community, and that such a report would be adequately supported so as to partially reimburse the extra cost of production. Copies of the proposed amalgamated report were submitted to the Chamber of Commerce early in November 1891 for distribution amongst the merchants, etc., of Calcutta, but so far no expression of opinion on the scheme has been received.

In connection with the Bay of Bengal weather signal service urgent telegrams are issued daily from the Meteorological Office at about 10-45 a.m., giving a description of the weather conditions in the various parts of the Bay. These telegrams were sent throughout the year to the Port Officers of Coconada, Madras, Rangoon, and Negapatam, and also to the Vice-Chairman of the Port Commissioners at Rangoon, and to the Port Officer, Akyab, from the 1st of January to the 30th April. These messages are ordinarily sent by a code prepared for the purpose, which has been found to answer very satisfactorily, but on the occurrence of stormy weather in the Bay of Bengal, messages descriptive of the intensity, movement, &c., of the storms are sent in ordinary language instead of by the code messages.

During the year also a small code was arranged to enable the weather conditions in the Bay to be telegraphed daily by means of flag signals to outward-bound ships passing Saugor Island. For this purpose the Bay was divided into four sections, and the weather in each section is arranged to be indicated by one of the commercial code flags, so that by a single hoist of four flags at Saugor Island on each day a description of the weather in the whole Bay on the same day can be given. At the close of the official year the code was in the press, and this system of supplying information will be worked experimentally during the current year.

The system of forwarding meteorological information from the pilot brigs at the Sandheads to this office by flag hoists shown by the pilots of inward-bound vessels as they pass Saugor Island Lighthouse has been continued throughout the year, and the special code devised for this purpose continues to work successfully. In addition, too, during the year it has been arranged for the Commander of the pilot brig to send off daily postcard forms containing the same information as given in the telegrams. These are sent as opportunities occur, and they serve first as a check on the accuracy of the telegraphic messages, and second they make the record of meteorological information from the Sandheads a continuous one, for in the case of telegrams these are not sent unless they can reach Saugor Island within 24 hours of the time at which the observations were made.

Working of the storm signals.

The working of the storm signal service has been almost unaltered during the year. Narayanganj was added to the list of ports appointed to receive storm warnings during the previous year, but there was great delay in providing the station with the mast and apparatus for displaying the signals, and it was only on 19th November 1891 that these were handed over to the Station Master at Narayanganj by the Public Works Department. The cyclone of the early part of November passed only a moderate distance to the south of this station on the 6th of November, and there were thus no means of hoisting signals and of warning the station at a time when serious danger was becoming unpleasantly close to it.

The year 1891 was one which will be memorable for the severity of the two cyclones which occurred during November, both of which did much damage to shipping, etc., and caused very considerable loss of life. The first of the November storms was almost unique. It has been traced back as far as the Gulf of Siam, where it existed at the latter end of October as a very severe cyclonic storm. It then crossed the Malay Peninsula and struck Port Blair in the Andaman Islands, moving in a north-westerly direction, in which it continued till it reached the South Orissa coast. It then changed its direction of movement, which became first Northerly, then North-Easterly, and finally East-North-Easterly. It passed over the Sandheads early in the morning of the 6th November, doing a large amount of damage, and then crossed through South and South-East Bengal into Cachar and Assam. Its diameter was small, but, on the other hand, it was one of the most violent cyclones on record. The second November cyclone apparently originated to the west or south-west of the Andamans and moved in a North-Easterly direction towards Burma, the direction of movement becoming more Easterly as the storm approached the land. It crossed the coast on the night of November 23rd, probably midway between Akyab and Diamond Island, and rapidly broke up in the Arakan Hills.

The dates of the principal storms occurring during the year are given in the first of the two following tables, and the action taken in the matter of issuing storm warnings and hoisting storm signals is indicated in the second of these tables.

Table giving a brief statement of the storms which affected the Bay of Bengal coasts during the year 1891.

No. of storm.	Period of depression or storm.	Character of storm.	Coast affected.
1	May 20th to 25th ...	Small storm formed off the Coromandel coast.	Circars and South Orissa coast.
2	May 28th to 30th ...	Small storm formed in the north of the Bay.	Bengal coast.
3	July 25th and 26th ...	Cyclonic storm formed off the Bengal coast.	Ditto.
4	August 1st to 3rd ...	Cyclonic storm formed off the Arakan coast.	Bengal and Orissa coasts.
5	August 21st to 24th ...	Feeble depression formed off the Orissa coast.	Orissa coast.
6	August 31st to September 2nd.	Feeble depression formed off the Orissa coast.	Ditto.
7	September 19th to 23rd	Moderate depression probably formed in the Gulf of Siam or the Chinese Sea, and passed into the Gulf of Martaban across Upper Siam and Tenasserim, and thence across the Bay of Bengal to False Point.	Ditto.
8	October 20th to 23rd ...	Feeble depression formed off the Coromandel coast.	Coromandel coast.
9	November 1st to 6th ...	Exceptionally severe cyclonic storm formed in the Gulf of Siam and passed into the Bay of Bengal across the Malayan Peninsula.	Ganjam, Orissa and Bengal coasts.
10	November 20th to 24th ...	Very severe cyclonic storm formed between the Madras coast and the Andamans.	Arakan and Burma coasts.
11	December 9th to 11th ...	Feeble depression formed off the Coromandel coast.	South India and Ceylon coasts.

Table showing the action taken by the Calcutta Meteorological Office in warning the coasts affected by the storms enumerated in the previous table.

Storm number.	Hoisting of Storm Signals.			Warning of ports by cautionary telegrams.	
	Ports ordered to hoist signals.	When hoisted.	When lowered.	Ports warned by cautionary telegrams.	Time and date of despatch of cautionary telegrams.

* No signal was hoisted at False Point, as there were no vessels or cargo boats in the anchorage at the time. Orders were issued to hoist the danger signals at 4-35 A.M. of 4th November 1891.

Warnings of heavy rainfall.

In August and September during the passage of the small storms marked four and seven in the above list, warnings that heavy rainfall might be expected were sent to the Engineers in charge of irrigation and other works in Orissa and the Midnapore districts.

Office Establishment.

The Meteorological Office staff has remained practically unchanged throughout the year. Under the able superintendence of the Head Clerk, Babu Fanindra Mohun Basu, the office has worked smoothly and very efficiently, and this has enabled the numerous reports, returns, maps, &c., published by this Department to be issued punctually and with great regularity throughout the year.

METEOROLOGICAL OFFICE;
CALCUTTA,
The 16th May 1892.

ALEX. PEDLER, F.I.C., F.C.S.,
Meteorological Reporter to the Government of Bengal.

RESOLUTION ON THE ANNUAL REPORT OF THE HEALTH OFFICER OF THE PORT OF CALCUTTA FOR THE YEAR 1891.

No. 1313Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Calcutta, the 3rd June 1892.

RESOLUTION.

READ—

A letter No. 2204, dated the 28th March 1892, from the Sanitary Commissioner for Bengal, submitting the Report of the Health Officer of the Port of Calcutta for the year 1891.

Establishment.—Dr. Macleod was the Health Officer of the Port of Calcutta from 1st January to 15th April. He was relieved by Dr. Forsyth, who was in charge for the remainder of the year, and has submitted the present report. The work was carried out in the steam-launch *Relief*, and in a steam-cutter which has taken the place of the bolio formerly used.

2. *Inspections.*—The following table shows the number and description of the vessels inspected by the Health Officer of the Port during the past five years:—

Year.	Inward-bound vessels inspected.		Outward-bound vessels inspected.		Total number of inspections.
	Foreign-going.	Coasting.	Foreign-going.	Coasting.	
1887 ...	630	100	699	172	1,601
1888 ...	568	88	629	179	1,464
1889 ...	559	112	598	174	1,443
1890 ...	530	117	576	171	1,394
1891 ...	629	185	627	60	1,501

The total number of inspections shows an increase over that of the previous year; the increase is stated to be due to a greater number of foreign arrivals and more frequent inspection of inward-bound coasters.

3. *Ventilation of crew spaces.*—There has been an improvement in the ventilation of the forecastle of ships, but the Health Officer states that there is still much room for improvement in forecastle comfort, especially as regards cargo steamers. In these, the forecastle is said to be merely an iron box with three or four small ports in the two sides and probably two ventilating tubes in the roof. In the hot-weather it is scarcely possible to go into them when these vessels are in port. An awning is usually stretched over the deck, but in some instances even this is not supplied, and it is not sufficient to prevent the iron deck being heated to a temperature almost unbearable. The Health Officer suggests that the forecastle deck or roof of all iron-built vessels trading with the East should be sheathed with wood both above and below. He will be asked to submit a report giving the names of these vessels and of their owners, and on receipt thereof the matter will receive the consideration of the Government.

4. *Bathing accommodation for native crews.*—The absence of properly protected bathing accommodation for native crews in vessels trading with European ports, referred to in last year's report, is becoming less evident as owners, when their attention is directed to the matter, fit up bathing-rooms for the use of the native portion of the crew.

5. *Sickness and mortality among European seamen.*—The number of European seamen who arrived in port during the year was 21,505 against 19,496 in the previous year: the daily average number in port was 1,426 against 1,679

in 1890. Including deaths out of hospitals, the death-rates per mille of the past five years were as follows:—

			Cholera.	Other Causes.	Total.
1887	...	...	10·03	16·91	26·94
1888	...	...	10·59	27·15	37·74
1889	...	...	11·07	20·29	31·36
1890	...	...	8 33	15·49	23·82
1891	...	...	7·01	22·44	29·45

6. The number of admissions into hospitals and deaths from different diseases during the five years ending with 1891 are shown in the subjoined table:—

	1887.		1888.		1889.		1890.		1891.	
	Admissions.	Deaths.	Admissions.	Deaths.	Admissions.	Deaths.	Admissions.	Deaths.	Admissions.	Deaths.
Cholera	29	19	26	15	33	17	15	14	12	9
Diarrhœa	116	1	106	2	142	2	51	...	56	2
Dysentery	70	...	31	4	61	4	24	...	31	...
Fever, enteric	8	2	2	...	1	...	4	1	8	4
„ malarious	220	1	120	1	227	2	167	3	106	2
„ simple	65	...	82	1	79	...	85	...	88	...
Scurvy	4	...	3	...	...	...	3	...	5	...
Small-pox	1	...	1	...	...	...	...	...	...	...
Sunstroke	5	1	19	5	6	1	4	1	3	...
Other diseases	1,201	11	1,182	21	1,267	17	1,066	19	975	17
Total ...	1,719	35	1,575	49	1,816	43	1,419	38	1,284	34

The total number of natural deaths was 42 against 40 in the previous year. Of the 42 deaths, 34 occurred in hospital and 8 out of hospital.

The number of cholera cases was less than in the year previous. There were altogether 13 cases, of which 10 proved fatal. The death-rate (7·01) per mille calculated on the daily average population was lower than that of the previous year, and was also lower than the quinquennial mean (10·0).

No case of small-pox was admitted during the year. There were 5 cases of scurvy against 3 in the year 1890, none of which were attended with fatal results.

There were 6 cases of sunstroke, of which 3 proved fatal. The 3 cases that were admitted into hospital terminated favourably.

The number of cases of drowning was 9 against 14 in the year previous.

7. The following figures exhibit the admissions into hospital since the year 1883 of European seamen suffering from venereal diseases:—

			Total admissions.	Rate per thousand.
1883	...	...	237	127·4
1884	...	...	184	109·2
1885	...	...	170	100·4
1886	...	...	417	179·2
1887	...	...	228	120·4
1888	..	...	183	121·1
1889	...	...	186	114·3
1890	...	...	248	147·7
1891	...	...	185	129·7

The number of admissions was lower than that in the previous year. The Health Officer, however, reports that ships' officers inform him that since the repeal of the Contagious Diseases Act, there has been a great increase in the number of men who have to be put off duty suffering from venereal affections after a vessel has left port.

8. There were 28 deaths at sea during the year under review against 3 in 1890.

9. *Sickness and mortality among the native floating population.*—The following figures show the mortality from all causes among the native floating population, the averages being calculated on a population of 25,000 :—

	Total deaths.		Ratio per mille.	
	1891.	1890.	1891.	1890.
Cholera ...	97	55	3·88	2·14
Bowel complaints ...	7	3	·28	·11
Fever, malarious ...	11	8	·44	·31
Do., simple ...	22	20	·88	·78
Other causes ...	33	31	1·32	1·20
Total ...	170	117	6·80	4·54

Of the 170 deaths that were reported during the year under review, 35 occurred in hospital; out of the 97 deaths from cholera, 17 occurred in hospital.

10. Twenty-seven deaths are reported to have occurred amongst lascars at sea during 1891 against 28 in the year previous. Of these 2 occurred in vessels making coasting voyages, and the remaining 25 in foreign-bound steamers and ships, against 2 and 26, respectively, in the previous year. The rates were ·31 and 2·98 per mille against ·36 and 3·37 in the year before, and calculated on the total population the death-rate was 1·83 against 2·12 per mille. No complaints were made by the lascar crews during the year.

11. *Pilgrims.*—The S. S. *Khiva*, from Jeddah to Calcutta, arrived in the port on the 21st August with 934 pilgrims. There were 19 cases of small-pox on board, and the vessel anchored in mid-stream below Mateabrooj. These cases were sent to the Campbell Hospital, the unprotected pilgrims were vaccinated, the ship thoroughly disinfected, and allowed to take up her moorings at Babu Ghat on the 23rd.

12. *Conservancy.*—In the Resolution on the Annual Report of the Health Officer for the year 1890, it was remarked that the general improvement in the conservancy of the foreshore of the river, which was noticed in the Resolution on the Health Officer's Annual Report for the previous year, continued during the year. The Health Officer says that there has been no change from last year's report, and that the drain and latrine in Messrs. Ahmuty and Company's compound in Howrah is engaging the attention of the Municipality. The Commissioner of the Burdwan Division has reported that the latrine on the premises of the Company's Foundry in Howrah will be pulled down, a new latrine on an unobjectionable site having been built.

Dr. Forsyth states that the brickfield foreshore at Ghoosery still continues to be used as a latrine by the brickfield workers, boatmen, &c. The Commissioner of the Burdwan Division, in a report of subsequent date to that of Dr. Forsyth, states that the owners of the brickfields have constructed latrines for the use of their employés, and that the nuisances are committed by outsiders and boatmen who anchor there and repair boats. The Magistrate has directed the District Superintendent of Police to arrest persons committing nuisances there.

In the Resolution on the Annual Report of the Health Officer for the year 1890, it was remarked that the scheme for the discharge of the Fort sewage into the Calcutta sewers, prepared at the request of the Military Department of the Government of India, was under the consideration of that Government. Further information has been asked for by the Government of India in regard to the scheme, and the subject is receiving the attention of this Government.

13. *Corpses and Carcasses.*—The Lieutenant-Governor regrets to find from the Health Officer's Report that there has been an increase in the number of corpses and carcasses found floating in the river. This matter will be brought to the attention of the Municipal and Judicial Departments of this Government.

14. *Water-supply.*—No mention has been made by the Health Officer in his Report regarding the supply of filtered water to the shipping during the year. Information on this head should always be furnished in the Annual Report.

15. *Comparative Statistics of the Port and Town of Calcutta.*—The usual statement showing the comparative mortality in the Town and Port of Calcutta for the past three years has been submitted by the Health Officer. As observed in the Resolution on the Report for 1890, the circumstances are so different that any analysis of the figures for purposes of comparison would be useless.

16. *Health Officer and Sanitary Inspector.*—The Lieutenant-Governor concurs in the favourable opinion expressed by the Sanitary Commissioner regarding the manner in which Dr. R. Macleod, who has been transferred to another appointment, performed the duties of Health Officer during the two-and-a-half years he held the appointment, and observes that Babu Nundo Lal Halder, Sanitary Inspector, is also mentioned as deserving of commendation.

By order of the Lieutenant-Governor of Bengal,

C. W. ODLING,

Joint-Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 4th June, 1892.

Division	No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.					
BURDWAN DIVN.	1	Burdwan	June 4, '92	2·64	Weather—very close, but good rain fell at Sadar last evening (3rd), which is hoped to be general. Crops doing fairly. Sowing of *aus* paddy general. Water-supply rather short. Fodder sufficient. Prices of common rice:— Srs. Burdwan ... ... 12 to 14 } per rupee. Kalna ... ... 9 to 13 Katwa ... ... 13 Raniganj 13
		Kalna	...	0·95	
		Katwa	...	Nil	
		Raniganj	...	0·16	
	2	Bankura	„ 4, '92	0·77	Weather—seasonable. Ploughing and sowing of rice going on. Condition of cattle good. No deficiency of fodder and water. Common rice selling at 13½ seers per rupee at Sadar and 14 seers at Vishnupur.
		Vishnupur	...	5·12	
	3	Birbhum	„ 4, '92	0·26	Local rain in showers over a good area of the district. Ploughing going on everywhere. Fodder fairly plentiful again, and water-supply better. Prices grown rather cheaper at 12½ to 16 seers per rupee.
		Rampur Hát	...	1·66	
	4	Midnapore	„ 4, '92	1·49	The slight rain which has fallen has done some good. Weather very hot in the day-time, but a breeze sets in generally in the evening. Indigo doing well. More rain would be very beneficial. Prices of common rice:— Srs. Sadar ... ... 13 } per rupee. Contai ... ... 13 Tamluk ... ... 12 Ghatál 13
	5	Hooghly	„ 4, '92	1·30	Weather—hot by day, cloudy and showery in the evening. Prospects have improved owing to the rain. Ploughing and sowing of *aus* going on in many places, and *áman* seedlings also being planted. Jute doing well, and sugarcane reviving. Fodder and water-supply inadequate. Prices of common rice:— Srs. Sadar ... ... 10 } per rupee. Serampore ... ... 10 Jahánabad 13
		Serampore	...	2·38	
		Jahánabad	...	0·74	
	6	Howrah	„ 4, '92	0·50	Weather—hot, except when it rains. Prospects good. Ploughing and sowing going on. Fodder and water-supply sufficient. Condition of cattle good. Price of rice 10 to 12 seers per rupee.
		Ulubaria	...	1·86	
PRESIDENCY DIVN.	7	24-Parganas	„ 4, '92	0·63	Weather—hot and cloudy with showers. There were a few showers of rain during the week, which have facilitated ploughing operations. More rain is wanted. Prices stationary. Supply of fodder and water sufficient. No cattle-disease.
	8	Nadia	„ 4, '92	0·09	Weather—very hot; fine with passing clouds. Prospects of standing crops favourable, but rain urgently wanted in the Sadar subdivision. Common rice selling at from 10 seers 10 chitaks to 13 seers 5 chitaks per rupee. Condition of cattle good, and supply of fodder and water sufficient.
		Kushtia	...	0·75	
		Meherpur	...	2·31	
		Ranaghat	...	0·99	
	9	Khulna	„ 4 '92	Nil	Weather—hot, sometimes slightly cloudy. Very little rain has fallen during the week, and more is urgently required. Ploughing and sowing going on. Prospects of *til* and sugarcane good in Bágerhat. Price of coarse rice ranges from 11 to 14 seers per rupee. Supply of fodder for cattle sufficient and want of water diminishing.
		Bágerhat	...	1·38	
		Satkhira	...	0·69	
	10	Jessore	„ 4, '92	1·19	Weather—hot with occasional showers. *Aus* and indigo doing well. Sowing of *áman* going on. Fodder and water plentiful. Prices stationary.
		Jhenida	..	2·42	
		Magura	...	1·24	
		Narail	...	2·93	
	11	Murshidabad	..		Report not received.
CHITTAGONG DIVN.	12	Chittagong	„ 4, '92	0·43	Weather—seasonable. Prospects of crops good. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali	„ 4, '92	2·12	Weather—hot with occasional showers. State and prospects of standing crops favourable. Fodder and water sufficient. No cattle-disease. Prices stationary.
		Fenny	...	2·62	
	14	Tippera	„ 4, '92	1·89	Weather—hot and cloudy. Sowing of *aus*, *áman* and jute approaching completion. Jute thriving. Prospects satisfactory. Prices stationary.
	15	Chittagong Hill Tracts.	„ 3, '92	4·69	Weather—hot during the first part of the week, and cloudy with occasional showers of rain during the latter part. Sowing in *jums* almost completed. Land for *aus* under preparation. *Jum* produce progressing. Cattle-disease reported. Common rice being sold at 10 seers per rupee.

No	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*				
DACCA DIVN.				
16	Dacca	June 4, '92	Figures not furnished.	Weather—hot. Heavy rain on 30th May with high wind. Jute, *áman* and *aus* paddy thriving. Prospects good. Fodder available. No cattle-disease. Common rice selling at from 12 to 14 seers per rupee.
17	Faridpur	„ 4, '92	0·72	Weather—very hot and fine. Standing crops promise well. A little rice may have been spoiled on low grounds. River rising gradually. Common rice sells at 13 seers per rupee at Sadar and Madaripur and 12 seers at Goalundo. Cattle doing well and get fodder.
18	Backergunge	„ 4, '92	1·05	Weather—hot. State and prospects of crops fair. Ordinary rice sells at from 10 to 13 seers per rupee. Fodder and water sufficient.
19	Mymensingh	„ 4, '92	3·53	Weather—hot and cloudy. Rain at intervals. Prospects of standing crops fair. In the Kishorganj subdivision jute crop has been somewhat damaged. Prices stationary. Supply of fodder and water sufficient.
RAJSHAHI DIVN.				
20	Dinajpur	„ 4, '92	5·17	Weather—hot, cloudy and rainy. Rain almost daily. *Bhadoi*, jute and sugar-cane prospering well. Ploughing for *haimanti* progressing. Prices of rice unchanged. Condition of cattle good. Fodder and water-supply sufficient.
	Thakurgaon	...	4·56	
21	Rajshahi	„ 4, '92	0·93	Weather—hot and cloudy with occasional local showers. *Boro* rice giving a bumper outturn. All other crops doing well, except linseed, which has been somewhat injured by rain. Very little cattle-disease in Nator. Fodder and water plentiful. Price of rice varies from 11 to 15 seers per rupee.
	Nator	..	1·79	
	Nowgong	...	3·21	
22	Rangpur	„ 4, '92	4·26	Weather—rainy. Prospects of *aus* and jute good. *Áman* being sown in some places. Price of common rice stationary.
	Kurigaon	...	2·95	
	Nilphamari	...	2·76	
	Gaibanda	...	3·40	
	Ulipur	..	6·14	
23	Bogra	„ 4, '92	2·82	Weather—hot and unsettled. Prospects of standing crops good. Ploughing for *áman* still continues. Condition of cattle good. No want of fodder and water. Price of rice stationary.
	Sherpur	...	2·08	
	Naukhila	...	2·72	
24	Pabna	„ 4, '92	1·51	Weather—hot and cloudy at times. Prospects of standing crops continue good. Weeding continues. Common rice selling at 12 to 13 seers per rupee. Supply of water and fodder sufficient. Condition of cattle good.
25	Darjeeling	„ 4, '92	1·08	Weather—rainy with occasional breaks. *Bhutta*, *chhota marua*, *kagni*, *bhadoi*, *fafar*, and potatoes progressing favourably. *Haimanti* seedlings being planted.
26	Jalpaiguri	„ 4, '92	2·79	Weather—hot and cloudy. Owing to heavy rain, jute and *bhadoi* have suffered to certain extent in low lands. Weeding continues. Price of common rice varies from 9 to 11 seers per rupee. No cattle-disease reported. Water and fodder-supply sufficient.
BIHÁR.				
27	Monghyr	„ 4, '92	0·46	Weather—very warm. Land is being ploughed. Rain is wanted for sowing. The small showers in the Sadar and Begusarai subdivisions were insufficient. Fodder and water scarce.

BHÁGALPUR DIVN.				
28	Bhágalpur	„ 4, '92	Nil	Weather—sultry and cloudy. Rainfall satisfactory in extreme north; elsewhere more rain wanted. Ploughing going on universally, and on rain falling *marua* will be transplanted, and rice, *cheena* and *makai* sown. Indigo reported fair from Banka but prospects decidedly unfavourable in north. No cattle-disease is apprehended. Common rice 11 seers 6 chitaks per rupee.
	Banka	...	1·02	
	Madhipura	...	0·24	
	Supaul	...	1·22	
29	Purnea	„ 4, '92	4·00	Good local showers with storms, chiefly at night. Sunshine in day-time. Sowing of *bhadoi* and jute completed. Plants doing well. *Janaira* paddy in ear. *Kauni*, *cheena* and *mung* being harvested. Good rain during week, and enough sunshine for weeding. Fodder and water ample. Prices of rice:— Srs. Sadar ... ... 10 to 13 } Kishanganj ... ... 10 to 11 } per rupee. Araria ... ... 12 to 13 }
	Kishanganj	...	1·60	
	Araria	...	0·53	
30	Malda	„ 4 '92	1·28	Weather—hot and oppressive. Sowing of *bhadoi* and harvesting of *boro* completed. Lands are being ploughed and prepared for *áman*. The yield of mango is 8 annas. Supply of fodder ample. Ordinary rice selling at from 11 to 13 seers per rupee.
	Chanchal	..	1·41	
	Shibganj	...	0·85	
	Gajol	...	2·88	
13	Sonthal Parganas	„ 4, '92	0·79	Rain has cooled the atmosphere. Prevailing winds are south and east. Lands are being ploughed everywhere. Sowing of paddy and Indian-corn has commenced in some parts. More rain wanted to improve water and fodder supplies. A slight improvement in price of rice, which is now selling at from 12 to 13 seers per rupee.

Division	No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BIHÁR—concld.				
PATNA DIVISION.	32	Patna June 4, '92 Barh ... Bihár ...	Nil Nil 0·30	Weather—hot. The recent rain did some benefit to the standing crops. *Cheena* is being harvested in several places. Sugarcane promising. Rain wanted for *bhadoi* sowings. Common rice selling at from 11 to 12½ seers per rupee. Fodder and water for cattle getting scarce at Barh. No distress reported.
	33	Gaya „ 4, '92 Aurangabad ... Nawáda ... Jahánabad ...	Nil 0·01 0·29 Nil	Weather—cloudy and humid Rain at Nawáda local. Sugarcane under irrigation doing fairly well. *Cheena* was sown on a very limited area and is on an average only a six-anna crop. *Marua* being sown in nurseries. Prices stationary. Cattle suffering from scanty supply of fodder and water.
	34	Shahabad „ 4, '92 Buxar ... Bhabhua ... Sarau ...	0·54 Nil Nil Nil	About half-an-inch of rain fell over the north of the district on the 3rd instant. This has sensibly cooled the air. The rainfall, which appears to have been pretty general in the Buxar and Arrah subdivisions, will be of good service to sugarcane and *bhadoi* ploughing. Elsewhere rain is much wanted; otherwise the situation is nearly unchanged. Rice is cheaper by half a seer per rupee in the south.
	35	Darbhanga „ 4, '92 Madhubani ... Samastipur ...	Nil 0·31 Nil	Weather—hot and occasionally cloudy. Recent rain has improved prospects of *bhadoi* and paddy seedlings. More rain wanted. In Samastipur moisture is insufficient for *bhadoi* sowings. Cattle have fodder, and water sufficient.
	36	Muzaffarpur „ 4, '92 Hajipur ... Sitamarhi ...	Nil Nil 0·31	Easterly winds. In half of Sitamarhi paddy and *bhadoi* crops are coming up. In the rest of the district field operations are commencing, though backward. *Cheena* has been reaped in Hajipur. Prices rising in Hajipur, falling in Sitamarhi. Want of water for cattle reported from Hajipur.
	37	Saran „ 4, '92 Siwán ... Gopalganj ...	Nil Nil Nil	Weather—seasonable. Flying thunderstorms. In Gopalganj land is being largely prepared for *bhadoi*, and *marua* and *kodo* sown. In other subdivisions ploughing going on to a less extent. Prices of common rice:— Srs. Chapra ... ... 11 } Siwán ... ... 11½ } per rupee. Gopalganj ... ... 13¼ } Water and fodder available.
	38	Champaran „ 4, '92 Bettia ...	0·70 0·04	Weather—hot; cloudy with occasional duststorms. Rain has fallen pretty generally all over the district except in thána Kessaria. Standing crops much benefited by rain. People are busy with agricultural operations. No change in prices of food-grains. No scarcity of water and fodder for cattle.
ORISSA.				
ORISSA DIVN.	39	Cuttack „ 4, '92	0·54	Weather—cloudy. Rain (more or less) throughout the district—beneficial but not sufficient. Sowing commenced. Fodder and water still scarce in parts. Rice sells at from 10½ to 15¾ seers per rupee.
	40	Puri „ 2, '92 Pipli .. Banpur ...	0·44 0·37 0·71	Weather—seasonable. Ploughing for the ensuing paddy crop has commenced. More rain is wanted. Miscellaneous crops good. Rice sells at from 10 to 14 seers per rupee.
	41	Balasore „ 4, '92	0·71	Weather—cooler Cultivation in progress More rain wanted, as the water-supply is very short. Rice sells at from 13 to 15 seers per rupee.
CHOTA NAGPUR.				
South-West Frontier Agency.				
CHOTA NAGPUR DIVN.	42	Hazáribágh June 4, '92 Giridi ...	0·09 0·13	Weather—sultry and rather unsettled; cloudy occasionally. Sugarcane doing well. Rain much wanted for agricultural operations. Fodder and water scanty in most places. Common rice selling at from 10 to 11 seers per rupee.
	43	Lohardaga „ 4, '92	0·13	Weather—very hot and cloudy. More rain wanted. Land is being prepared for early paddy. Common rice selling at 14 seers per rupee. Fodder and water not sufficient.
	44	Palámau „ 3, '92	Nil	Weather—cooler: some showers. Sugarcane doing well. A good fall of rain reported in the Chandwa outpost. Showers in other parts, but rain still badly wanted. Common rice selling at from 12 to 14 seers per rupee. Supply of fodder and water very limited.
	45	Singhbhum „ 4, '92	Nil	Rain in most parts of the district, but none at head-quarters, though storms have come daily. Sugarcane and *boro* paddy doing fairly well. Common rice 12 seers per rupee at Chakradharpur; at other places prices stationary.
	46	Manbhum „ 4, '92 Gobindpur ...	0·70 1·24	Weather—bright and cool. Rain all over the district except in Gourangdi to the east. Ploughing in full swing. Paddy being sown in places. Fodder and water-supply sufficient. Rice 13 to 16 seers per rupee.

Published for general information.

* Means of 5 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 4th of June 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District observations. Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th May 1892. Mean for district.	Since 16th May 1892. Normal mean.	Since 16th May 1892. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.— .....indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 7th June* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 4TH OF JUNE 1892.

On the 29th of May, or at the commencement of the present week, pressure was below the normal at all stations, the defect ranging from about a twentieth of an inch in the south of the province to a tenth of an inch at Gaya, and nearly a tenth of an inch at Sibsagar. This low pressure over Bihár rather enhanced the usual tendency for a circulation of winds to set up over the west of the province, and winds varied from south-westerly at some of the south-western stations, through southerly in South Bengal and south-easterly in East Bengal, to easterly in the north of the province. The general weather conditions in the province continued somewhat disturbed, and local storms with rain were rather numerous in South-West and North Bengal on this day. These conditions continued practically unchanged on the 30th, and again a few local storms with rain occurred in the same districts. On the 31st the barometric changes were small and variable, and the general meteorological conditions remained unchanged. On this day the number of local storms with rain reported was decidedly larger, and almost every station in East and North Bengal and a good many stations in South-West Bengal reported rain. On June 1st a moderate rise of pressure commenced over the province, and pressure became above the normal at all except the western stations, and the local storms with rain reported on this day were mainly confined to Orissa, South-West Bengal and parts of North Bengal. On the 2nd a further rapid increase of pressure had taken place, the increase over a large area exceeding a tenth of an inch, and at some stations equalling 0·14". This increase was largest at the north-western stations, and caused an entire change in the distribution of pressure, which became about a sixth of an inch in excess of the normal in the north and centre of the province, and about a seventh above it elsewhere. This increase again continued on the 3rd, and over a considerable portion of the province pressure became from a fifth to a quarter of an inch above the normal, but on the 4th, or the last day of the week, a reaction set in and pressure began to fall moderately to rapidly. From the 2nd, however, with the rapidly increasing pressure, the local storms with rain, which had previously been so frequent, almost entirely ceased, and from the 2nd to the 4th the whole province was to a great extent rainless except for a few local showers in Orissa, North Bengal and Bihár.

In the centre and south of the Bay the south-west monsoon current has been blowing pretty steadily throughout the week, and at one time it appeared almost as if the current had drifted well into the north of the Bay, and on the 1st of June the meteorological observer at Akyab reported that the monsoon had broken at that station. Immediately, however, pressure commenced to rise rapidly in Bengal and to become in excess of the normal as it did from about the 2nd, conditions became unfavourable for any further northerly advance of the monsoon winds towards Bengal, and hence at the close of the week conditions were not so favourable for the setting in of the rains in Bengal as they had been at the commencement.

Pressure.—Owing to the very high pressure obtaining during the second half of the week, the mean pressure has been in excess of the normal for the week in all districts. This excess generally varies from 0·04" to 0·07," but it is smallest in Bihár and in the western districts generally, where at the commencement of the week pressure was very defective.

Temperature.—The temperature was usually moderate in the first half of the week, but it rose very considerably in the second half. The mean temperature for the week has been fairly normal in Orissa, South-West and North Bengal, and North Bihár, but, on the other hand, it has been from 1° to 2° above it in Assam, East Bengal, and Chota Nagpur, and in South Bihár it has been 4·1° above it. For the whole of the province of Bengal the mean temperature has been about one degree in excess of the normal.

Rainfall.—The falls in East and North Bengal have averaged from two to three inches, and those in South-West Bengal about an inch. In the other districts the falls have been much smaller, and have only equalled from about a third to half an inch. In all districts the falls have been rather largely in defect of the normal, in most cases only equalling about fifty per cent. of the ordinary amounts.

The falls, however, in such smaller districts as 24-Parganas, Howrah, Hooghly, Jessore, Khulna, Backergunge, Darbhanga, Champaran, Gaya, Patna, &c., have been even smaller than represented by the above figures, and in such districts as Muzaffarpur, Saran, and Singhbhum, rainfall has been practically absent.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 4th of June 1892:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1892.

The average vapour tension of May from 9 years' registers ...	0·933		
The mean cloud proportion of the month	4·32		
The average cloud proportion of May from 15 years' registers ...	4·52		
The total rainfall of the month	4·29		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	4·12		
The average fall of May from 48 years' registers	5·40		
The greatest fall in 24 hours	1·22	28th.	
	Days.		
The number of rainy days in the month	10		
The average number of rainy days in May from 24 years' registers	13		
The mean maximum equilibrium temperature of solar radiation during the month	ϴ 150·1		
The mean difference of sun and air temperatures	55·1		
The greatest sun temperature	158·1	13th.	
The greatest excess of sun over air temperature	60·9	24th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	76·8		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	2·2		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	4·4	12th.	
	Miles		
The mean movement of the wind per day	202·3		
The greatest movement of the wind in one day	398·0	22nd.	
The greatest movement of the wind in one hour	22·0	22nd	7 to 8 P.M.

The number of hours with winds from each of the 8 points—

N. 6, N.E. 7, E. 25, S.E. 83, S. 393, S.W. 207, W. 12, N.W. 8, Calm 3.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·5° higher; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

J. H. GILLILAND,

For Meteorological Reporter to the Govt. of India.

The total fall from 1st January to 4th June 1892	5·98
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	10·43

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; ⌓, dew.

J. H. GILLILAND,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 6th June 1892.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending with Saturday, the 14th May 1892.

* Includes 642 tons and 608 tons of coal during 1892 and 1891, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock 553 tons and 204 tons for the years 1892 and 1891, respectively, for which no "Up" and "Down" register maintained.

Statement of principal commodities carried on the Bengal Central Railway during the month of March 1892.

INCREASES.

	Tons.
Coal	467

Due to ordinary fluctuations.

DECREASES.

	Tons.
Oil-seeds	6,067

Jhikargacha, Bongong and Jessore show a marked decrease, said to be due to lesser production.

The increases and decreases in other commodities are due to ordinary fluctuations of traffic and call for no special remarks.

CALCUTTA, *the* 21*st May* 1892.

P. BARCLAY,
Traffic Superintendent.

LIBERALITY OF NAWAB FAIZUNNESSA SAHEBA AND HER THREE CO-SHARERS.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 11*th June* 1892.

RESOLUTION No. 1614.

READ—

Endorsement from the Commissioner of Chittagong, No. 187T., dated 19th May 1892, and the enclosed report from the Magistrate of Tippera regarding the liberality of Nawab Faizunnessa Saheba and her three co-sharers in connection with the construction of a female hospital in Comilla under the auspices of the Lady Dufferin Fund.

The Commissioner of Chittagong has brought to the notice of Government that Nawab Faizunnessa Saheba has made over Rs. 10,000 to the Magistrate of Tippera for the purpose of giving effect to her offer to construct a female hospital in Comilla under the auspices of the Lady Dufferin Fund, and that the Nawab Saheba and her three co-sharers, Najamunessa Chaudhrain, Badarunessa Chaudhrain, and Chaudhri Mozuffe Ghazi, have provided a suitable site

free of cost for the building. The Lieutenant-Governor has already been pleased to express his high appreciation of the public spirit by which the Nawab Saheba has been animated, and desires now to tender to her his thanks for her liberal donation. His Honour's thanks are also due to the Nawab Saheba and her three co-sharers for generously providing a site free of cost for the building.

2. The Lieutenant-Governor will be glad to be informed by the Commissioner on what plan the hospital is being built, and whether it has been approved by the Inspector-General of Civil Hospitals.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Commissioner of Chittagong for information and guidance, and for communication to the Nawab Saheba and her three co-sharers.

Ordered also that a copy of this Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 11*th June*, 1892.

BENGAL.				
BURDWAN DIVN.	1	Burdwan June 11, '92 Kalna ... Katwa ... Raniganj ...	3·73 1·52 0·92 3·52	Weather—very stormy with pretty continued rain; heavy at times. Cool. Ploughing and sowing of *aus* being briskly carried on. Prices of common rice:— Srs. Burdwan ... ... 11 to 16 } per rupee. Kalna ... ... 9 to 13 Katwa ... ... 13 Raniganj 13
	2	Bankura „ 11, '92 Vishnupur ...	3·25 1·03	Weather—much cooled down and rainy. The rainfall of the week has much facilitated agricultural operations. Seed-plants are coming on well and sugarcane thriving. Fodder and water-supply sufficient. Common rice selling at 13½ seers per rupee at Sadar and 14 seers at Vishnupur.
	3	Birbhum „ 11, '92 Rampur Hát ...	5·48 1·30	Rain nearly every day in the week, very heavy on 6th, 9th, and 10th, and is going on heavily this morning (11th). Fodder and water now quite plentiful again. Prices of rice 12 to 16 seers per rupee.
	4	Midnapore „ 11, '92	2·35	During the last few days there has been a great deal of rain which has benefited the country greatly. Ploughing going on; crops doing well. Sugarcane improved by the rain. Indigo favourably reported of. Fodder plentiful. Prices of common rice:— Srs. Sadar ... ... 13 } per rupee. Contai ... ... 13 Tamluk ... ... 12 Ghatál 13
	5	Hooghly „ 11, '92 Serampore ... Jahánabad ...	1·24 0·27 0·24	Deep black clouds hanging on. Weather cyclonic. Sugarcane and jute doing well. Ploughing is being carried on, but rain wanted everywhere very badly. In thánas Polba, Pandua and Dhaniakhali, water-supply and fodder have become very scanty, as also in some of the villages in Jahánabad sub-division. In Serampore, however, it is otherwise. High cyclonic winds blowing from Wednesday (8th) evening last. Common rice at Sadar and Serampore 10 to 11 seers a rupee and at Jaháuabad 12 seers.
	6	Howrah „ 11, '92 Ulubaria ...	3·29 0·43	Weather—cooler. Monsoon appears to have broken. Ploughing and sowing continue. Prospects favourable. Condition of cattle good. Fodder and water-supply sufficient. Rice 10 to 12 seers per rupee.
PRESIDENCY DIVN.	7	24-Parganas „ 11, '92	2·89	Weather—cloudy and hot at times with showers. The weather has been very favourable for all crops sown and being sown. Ploughing and sowing proceeding briskly. No deficiency of fodder and water. No cattle-disease. Prices unchanged.
	8	Nadia „ 11, '92 Kushtia ... Meherpur ... Ranaghat ...	1·07 0·15 0·60 2·30	Weather—rainy with strong wind. Monsoon broken over the whole district. Agricultural operations going on vigorously. Prospects good.
	9	Khulna „ 11, '92 Bágerhat ... Satkhira ...	3·28 2·41 0·59	Weather—rainy. Good rain has been falling during the last three or four days, and ploughing and sowing are progressing vigorously. *Til* is being cut in Bágerhat, and prospects of sugarcane continue favourable there. Common rice selling at 11 to 14 seers per rupee. Fodder and water for cattle sufficient.
	10	Jessore „ 11, '92 Jhenida ... Magura ... Narail ... Bangaon ...	2·74 0·73 0·61 0·88 0·60	Weather—cloudy and rainy. Sowing of *aus*, jute, and indigo over, and that of *áman* still progressing. Prospects good. Supply of fodder and water sufficient.
	11	Murshidabad „ 11, '92	1·90	Weather—stormy with showers and fairly cool. Sowing of *bhadoi* rice finished. Crop up in most places and promising. Weather favourable for all crops except mangoes. Coarse rice sells at 12 seers per rupee. Fodder plentiful for cattle.
CHITTAGONG DIVN.	12	Chittagong „ 11, '92	0 69	Weather—seasonable. Prospects of crops good. Cultivation of *aus* commenced. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali „ 11, '92 Fenny ...	3·18 1·92	Weather—rainy. State and prospects of the standing crops good. *Aman* still being sown. Fodder and water ample. No cattle-disease except in the island of Hatia. Prices stationary.
	14	Tippera „ 11, '92	2·29	Weather—hot and cloudy. *Aman* paddy is being transplanted. *Aus* and jute thriving. Prospects satisfactory. Prices stationary.
	15	Chittagong Hill Tracts. „ 10, '92	3·11	Weather—hot with occasional showers of rain throughout the week. *Jum* paddy and cotton plants progressing. Lands are being ploughed for late rice. Cattle-disease still prevailing. Common rice selling at 10 seers per rupee.

No.	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*				
Dacca Divn.				
16	Dacca	June 11, '92	0·83	Weather—warm and cloudy. Jute and paddy thriving. *Aus* paddy partially affected owing to insufficient rain. Prospects of other crops fair. Fodder available. No cattle-disease. Common rice selling at from 12 to 14 seers per rupee.
17	Faridpur	„ 11, '92	1·73	Weather—cloudy and stormy. Standing crops doing well. Common rice sells at 11½ seers per rupee at the Sadar, 12 seers at Goalundo and 13 seers at Madaripur. No cattle-disease and cattle get fodder.
18	Backergunge	„ 11, '92	2·45	Weather—cyclonic. State and prospects of crops satisfactory. Ordinary rice sells at from 10 to 13 seers per rupee. Fodder and water sufficient.
19	Mymensingh	„ 11, '92	1·84	Weather—cloudy and stormy; rainy. Prospects of crops fair. Excessive rain has caused some damage to *aus* and jute crops in some parts of the district. Rice sells at 13½ seers per rupee. Supply of fodder and water sufficient.
Rajshahi Divn.				
20	Dinajpur Thakurgaon	„ 11, '92 ...	2·13 6·05	Weather—cloudy and rainy with high easterly wind. Prospects of standing crops good. Preparation of lands for *haimanti* rice continues. Price of rice at Sadar 11 seers per rupee. This rise is owing to incessant rain and consequent difficulty of drying the paddy before husking. Prices stationary in Thakurgaon. Condition of cattle good. Fodder and water-supply continue sufficient.
21	Rajshahi Nator Nowgong	„ 11, '92	0·42 0·42 1·51	The rains have set in, and the weather is quite seasonable. Rain has done a little harm to linseed. *Boro* rice has given a 16 annas outturn. *Aus*, *áman*, jute, and all other crops are doing well. A few cases of cattle-disease are reported. Fodder and water-supply ample. Price of rice ranges from 11 to 15 seers per rupee.
22	Rangpur Nilphamari Gaibanda Kurigaon Ulipur	„ 11, '92	0·8 2·74 0·82 2·13 0·68	Weather—cloudy and warm. *Aus* rice and jute doing well. The former is being harvested in some places. Transplantation of *áman* in progress. Price of common rice stationary.
23	Bogra Sherpur Naukhila	„ 11, '92	2·02 0·83 0·29	Weather—hot and cloudy with occasional showers and strong east wind. Crops on ground doing well. Ploughing for transplantation of *áman* still going on. Condition of cattle not bad. No want of fodder and water. Common rice selling at 13 seers a rupee.
24	Pabna	„ 11, '92	0·78	Weather—hot and cloudy at times. Prospects of standing crops continue good. Price of common rice rose to 12 seers per rupee. Condition of cattle good. Water-supply and fodder sufficient.
25	Darjeeling	„ 11, 92	10·29	Heavy rain during latter part of week. *Bhutta*, potatoes, *bhadoi*, *chhota marua*, and *kangni* thriving well. Water and fodder-supply sufficient. Cattle-disease in some parts of the hills.
26	Jalpaiguri	„ 11, '92	1·13	Weather—hot; cloudy with occasional showers. Prospect of jute not favourable. *Bhadoi* crop improving. Ploughing for transplantation of *haimanti* paddy commenced in certain places. No cattle-disease. Fodder and water-supply abundant.
BIHAR.				
Bhagalpur Divn.				
27	Monghyr Begusarai Jamui	„ 11, '92	2·75 1·22 1·67	Since the 6th the sky has the appearance of the monsoon having begun. Very high east wind since 10th, apparently the result of a cyclone. The rain has set ploughing and sowing agoing all over the district. *Bhadoi* crops are in part sown; also *kauni*, *kheri*, *sama* and *marua*. Sugarcane doing well. Water-supply now plentiful, and there will soon be fodder in abundance.
28	Bhagalpur Banka Madhipura Supaul	„ 11, '92	3·18 1·07 6·80 6·13	Weather—rainy and stormy. Good rainfall throughout the district, heavier in north than in south. *Marua* being transplanted and rice sown. Standing crops doing very well. Agricultural operations in full swing and prospects at present distinctly favourable. No cattle-disease.
29	Purnea Kishanganj Araria	„ 11, '92	1·58 3·36 10·22	The rains seem to have set in since Monday last (6th), when there was a heavy fall of nearly 10 inches at Araria. Crops all doing well. There was some anxiety as to the south and south-west of the district, where the rain had been very scanty and indigo and *bhadoi* were stunted, but it has now begun to fall there. Prices of rice:— Srs. Sadar ... ... 11½ to 13 } Kishanganj ... ... 10 to 11 } per rupee. Araria ... ... 12 to 13 }
30	Malda Chanchal Shibganj Gajol	„ 11 '92	2·03 1·26 0·79 4·93	Weather—seasonable; latter part of the week cloudy with occasional rain and high easterly wind. Standing *bhadoi* crops thriving and promising well. Lands are still being ploughed and prepared for *áman*. Yield of mango 8 annas. Supply of fodder ample. Ordinary rice selling at from 10½ to 13 seers a rupee.
13	Sonthal Parganas Deoghur Godda Jamtara Pakaur Rajmahal	„ 11, 92	* 2·26 1·72 0·27 0·98 1·41	Weather—cloudy and cool with east winds and rain. A storm on the 10th and 11th. Prospects greatly improved. Sugarcane doing well. The rain has saved the small sowings of Indian-corn. Cultivation of rice in full swing. The grass sprung up will help the cattle. Water and fodder now plentiful. Price of rice 10 to 13 seers per rupee.

* Figures not given.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
	BIHÁR—*concld.*		
	Patna Division.		
32	Patna June 11, '92	2·88	Weather—cloudy with high winds. The rainfall has facilitated the preparation of land for *bhadoi* crops. *Cheena* and sugarcane have been much benefited by it. Harvesting of *cheena* has commenced in Bihár. Prices of food-grains almost stationary. Common rice selling at from 11 to 12½ seers per rupee. No distress reported. Fodder sufficient except in Barh, where, however, there is an improvement.
	Barh ...	3·80	
	Bihár ...	1·65	
	Dinapur ...	1·15	
33	Gaya „ 11, '92	1·96	Monsoon seems to have burst; stormy weather. *Marua* millet being sown. Vigorous preparation of land for *bhadoi* will now begin, and there will soon be a sufficient supply of fodder and water. Prices stationary.
	Aurangabad ...	2·41	
	Nawáda ...	4·2	
34	Shahabad „ 11, '92	0·66	Weather—very stormy. High wind and frequent showers. The rainfall has done immense good to the sugarcane, but unfortunately it has been least where most wanted in the west of the district. Ploughing for *bhadoi* has not yet begun. Fodder and water-supply adequate. Prices stationary.
	Buxar ...	2·47	
	Sasaram ...	1·51	
	Bhabhua ...	0·57	
35	Darbhanga „ 11, '92	3·58	High east wind prevailing. Rainfall has greatly improved general cultivation and benefited *janera*, *dhan*, and *makai* lately sown, also *marua* plants. Sowings of *bhadoi* commenced. Prices almost stationary, with slight inclination to fall in places.
	Madhubani ...	4·95	
	Samastipur ...	4·35	
36	Muzaffarpur „ 11, '92	4·84	Weather—cloudy and cool; frequent strong east winds. Rain has fallen generally throughout the district. Prospects of *bhadoi* and rice crops now excellent. Agricultural operations now in full swing everywhere. Prices have not fallen appreciably.
	Hajipur ...	1·35	
	Sitamarhi ...	3·88	
37	Saran „ 11, '92	2·89	Heavy rain-storms everywhere from 1½ to 6 inches. High cyclonic winds for last 24 hours. *Bhadoi* sowings started, and also manufacture of indigo in some places. Water and fodder sufficient. Prices of common rice:— Srs. Ch. Chapra ... ... 11 8 } Siwán ... ... 13 4 } per rupee. Gopalganj ... ... 12 10 }
	Siwán ...	1·34	
	Gopalganj ...	0·42	
38	Champaran „ 11, '92	4·77	Weather—hot, cloudy at times. Rain has fallen everywhere in the district. Ploughing going on. Paddy and other crops are being sown. Standing crops much benefited by rain. No scarcity of fodder and water for cattle. Prices almost stationary.
	Bettiah ...	1·23	
	ORISSA.		
	Orissa Divn.		
39	Cuttack „ 11, '92	4·58	Weather—cold and cloudy. Rain more or less general throughout the district with very beneficial results. Sowing in progress. Price of common rice has fallen from 10½ seers to 11½ seers per rupee at Sadar, though stationary in the interior.
40	Puri „ 9, '92	8·12	Weather—stormy. Ploughing going on. Miscellaneous crops doing well. Rice sells at 10 to 14 seers per rupee.
	Khurda ...	2·14	
41	Balasore „ 11, '92	2·76	Weather—cyclonic. Recent rainfall will be very beneficial for cultivation, which is still backward.
	CHOTA NAGPUR.		
	South-West Frontier Agency.		
	Chota Nagpur Divn.		
42	Hazáribágh June 11, '92	5·09	Weather—cloudy and cool. Very wet and stormy since 10th. Ample rain everywhere. Ploughing and sowing in vigorous progress. Water abundant. Fodder now sufficient. Common rice selling at from 10 to 11 seers per rupee.
	Giridi ...	0·33	
43	Lohardaga „ 11, '92	7·40	Weather—rainy. The rainfall is sufficient for ploughing and sowing *bhadoi* crops. Common rice selling at 14 seers per rupee. Fodder sufficient.
44	Palámau „ 10, '92	1·02	The monsoon seems to have broken and the weather is now cool. Showers in almost all the thánas of the district. Fields are being prepared for *bhadoi* crops. Sugarcane thriving. Common rice selling at from 12 to 13 seers per rupee. Fodder-supply limited.
45	Singhbhum „ 11, '92	2·87	Rain on four days. Weather very boisterous and wet. Rice crop being sown. Price of common rice stationary.
46	Manbhum „ 11, '92	3·41	Heavy rain during the week. The rains have evidently set in, and the people are busily engaged in ploughing. Young sugarcane doing well. All anxiety in the matter of fodder and water-supply now at an end. Rice 13 to 16 seers per rupee.
	Gobindpur ...	4·38	

Published for general information.

CALCUTTA; REVENUE DEPT.,
The 14*th June*, 1892.

C. E. BUCKLAND,
Secretary to the Govt. of Bengal.

'he following Statement shows the Quantities of the Principal Staples of Traffic imported into Calcutta from the Inter during the month of March, 1892.

The total fall from 1st January to 11th June 1892	9·38
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	12·91

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder.

J. H. Gilliland,
For Meteorological Reporter to the Govt. of India.

Meteorological Office, Govt. of India;
Calcutta, the 13th June 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF MAY 1892.

THE principal features in the meteorology of Bengal and Assam during May 1892 have been as follows :—

1. Pressure at the commencement of the month was distinctly in excess of the normal; it then became largely in defect, the mean defect at many stations in the second week equalling about a tenth of an inch. This defective pressure continued, though gradually becoming rather smaller, and the seat of largest defect was removed to Bihár in the third week, but at the close of the month, though pressure remained in considerable defect, the deficiency was smallest at some of the northern stations and in Bihár, and largest at some of the southern stations and in Assam. The mean pressure therefore of both Bengal and Assam has been about 0·04 inch in defect of the normal.

2. Temperature was very high in the early part of the month, the excess above the normal for the first week averaging 4·2°. This excess was continued in the second week, but it was about a degree smaller than in the previous week, and in this week the excess in Chota Nágpur equalled the unusually large amount of 9·2°. In the third week of the month the average temperature of the province was again about three degrees in excess of the normal, but during the fourth week owing to rather heavy rain having fallen temperature fell rapidly, and became below the normal by between one and two degrees. For the whole month, therefore, the mean temperature of the province of Bengal has been about 2° in excess of the normal, but in Assam there has been a defect of about a degree.

3. The winds blowing over the province have been more strongly easterly than usual, and south-easterly and southerly winds have generally prevailed in the south of the province, and easterly winds at the northern stations. During a considerable part of the month also the southerly winds blowing at the head of the Bay and in parts of South Bengal were unusually strong.

4. Rainfall in the early part of the month was confined to North and East Bengal, but the falls were decidedly less than the normal. In the second week the rainfall increased in heaviness in East and North Bengal; while South-West Bengal and North Bihár commenced to receive moderate amounts. In the third week rainfall occurred almost daily in North Bengal, while in East and South-West Bengal and North Bihár only occasional local showers were reported, while in the last week of the month moderate to heavy rain was received in all districts except South Bihár.

5. The number of hot weather storms or nor'-westers which occurred during the month has been very considerable, but they have as usual been most frequent in the eastern and north-eastern districts, though during the fourth week of May they were also rather numerous in all districts except South Bihár.

6. The first appearance of strong winds at the Ceylon stations indicating that the real south-west monsoon current was advancing up the Bay commenced on about the 10th, and these continued almost till the close of the month. In front of this advance a barometric depression was formed in the Andaman Sea, which moved slowly into the Gulf of Martaban, and then over Burma, and which brought up heavy rain to that district. A second feeble low-pressure area commenced to develop off the South Orissa and Ganjam coasts, but both depressions filled up on the 26th without developing to any considerable extent.

The changes of conditions during the greater part of the month do not call for any detailed remarks. For the first week conditions were of ordinary hot weather character, and the number of local storms occurring was small. In the second week pressure fell so rapidly at the western stations that a feeble low-pressure area formed over the western parts of the province, and hence with these disturbed conditions the number of local storms or nor'-westers was largely increased. This feeble depression filled up on about the 14th, when weather became more settled, but again on the 20th an almost similar low-pressure area was developed over part of Chota Nagpur and West Bengal. This lasted for several days, and it filled up on the 24th, but again the disturbed conditions induced by the feeble depression gave rise to numerous local storms and rain showers which lasted in Bengal almost up to the close of the month.

In the south of the Bay winds began to strengthen owing to the advance of the south-west monsoon from about the 10th, and they blew steadily and rather strongly almost to the close of the month. By about the 24th these winds had apparently reached well into the centre of the Bay, when pressure began to fall moderately to rapidly in the east of the centre of the Bay, forming a feeble depression, and on this date also winds round the Andaman Sea appeared to form part of a cyclonic circulation. On the same day also there was a distinct tendency to low pressure off the South Orissa and Ganjam coasts. On the morning of the 25th, the wind directions in Bengal had become very irregular, and at a good many stations north-easterly winds were reported, showing slight indraught towards the Bay, and the feeble barometric depressions appeared still to exist off the South Orissa coast and in the Gulf of Martaban, but the pressure changes on this day in Bengal were small. On the 26th the depression in the Bay off the Orissa coast filled up, while that in the Gulf of Martaban may probably have

passed over Burma and there filled up, for heavy rain was received over that area. Pressure distribution and wind directions therefore became a little more normal, and on the 27th pressure rose slowly in Bengal, and the distribution became practically normal for the day, and the winds also became of directions varying from southerly in the southern districts through south-easterly at the eastern stations to easterly in the north of the province. On the 28th the pressure changes were comparatively small, though usually there was a fall, and pressure was again becoming below the normal, particularly in Bihár, but winds continued fairly normal in direction on this day as they did up to practically the close of the month.

In the Bay the south-west monsoon current continued to blow fairly steadily and rather strongly, and after the disappearance of the two feeble depressions it probably continued its northerly advance, and by the close of the month it had apparently drifted well into the north of the Bay, and at one time even it appeared to be commencing to drift over South-East Bengal. On the 1st of June indeed the observer at Akyab reported that the monsoon had broken at that station, and it certainly, at the close of May, had advanced well into the north of the Bay.

Pressure.—In the first week of May pressure was above the normal by from 0·03" to 0·05", the smallest excess pressure being reported in North Bengal and North Bihár. In the second week a rapid fall occurred, and pressure became in defect by 0·09", while defects in excess of a tenth of an inch were registered at such stations as Motihari, Dehri, Buxar, Gaya, Bankipore, Bankura, Raniganj, and Berhampore. In the third week at such stations as Gaya, Bankipore, and Dehri, average defects of about 0·08" were registered, but in the south and south-east of the province the defects were from 0·02" to 0·03", and in Assam they were only 0·015". In the fourth week the largest defect had been transferred to the extreme east of the province, where at Sibsagar it equalled 0·09 and in the north and west of the province, at such stations as Darbhanga, Purnea, and Rangpur, the defect only equalled 0·03", so that the usual defect over the province equalled from 0·05" to 0·07."

For the whole month the mean pressure has been in distinct defect of the normal, the defects ranging from about 0·02" at the extreme south-eastern and south-western stations, such as at Chittagong and Comilla and Gopalpur and False Point, to about 0·04" and ·05" in Bihár, defects exceeding 0·05" being recorded at Motihari and Bankipore. The general defect over the province of Bengal equals about 0·04".

In Assam the average defect is 0·042", and at Sibsagar the large defect of 0·067" is recorded.

Temperature.—The mean average temperature of the whole of Bengal for the month has been 2·1° in excess of the normal. The excess has been the large amount of 4·8° in Chota Nagpur, but in most Divisions it has equalled about 2° or 3°. In North Bengal, on the other hand, there has been a defect of about half a degree, and in Assam the defect has equalled 1·3°.

Some very high maximum temperatures have been recorded during the month, and temperatures exceeding 114° have been recorded at Gaya and Chaibassa, exceeding 112° at Cuttack, Bankura, Raniganj, and Dehri, and exceeding 110° at Midnapore, Chapra, Arrah, and Naya Dumka.

Rainfall.—An average fall of nearly 13 inches of rain has occurred in North Bengal, or more than 4 inches, or roughly 50 per cent., more than usual. The fall in East Bengal has equalled 11 inches, or nearly two inches, or roughly 20 per cent., in excess. In all other districts, however, the falls have been in distinct defect, the percentage of defect equalling in South-West Bengal 11 per cent., in North Bihár 28 per cent., in Chota Nagpur 47 per cent., in Orissa 50 per cent., and in South Bihár no less than 64 per cent. The actual fall in South-West Bengal has averaged nearly five inches, in North Bihár nealy two and-a-half inches, in Orissa nearly two inches, in Chota Nagpur one and-a-half inches, and in South Bihár only 0·85 inch. Taking these various divisions as having an equal value in the calculation, it may be said that the rainfall of Bengal in May was about 20 per cent. in defect of the normal fall.

The variation in the amounts of rain received by stations in different districts of the province has been extraordinarily large, and thus Kuch Bihár during the month has received 46·22 inches of rain, while on the other hand falls of less than a fifth of an inch are reported at Satpara (Puri), Roshera (Darbhanga), Buxar, Dehri, Sasarám, Aurangabad, Rajouli (Gaya), Pakri Barawan (Gaya), Bikram (Patna), Gogri (Monghyr), Sheikpura (Monghyr), Palámau, and Garwah (Palámau). The heaviest falls have occurred at the stations in the hills in the north-east of the province, and the smallest usually in the west of Chota Nagpur and Bihár, though a broad area of extremely small rainfall stretches eastward through Bihár, and includes parts of the Sonthal Parganas. The lines of equal rainfall usually run in a north-westerly direction, and thus to the east of a line joining the extreme north-east corner of the Bay with Kissenganj in the Purnea district rainfall has been in excess of 10 inches, and to the west of it less than 10 inches; the line of 5 inches rainfall runs roughly from Patuakhali to Supaul, and that of 2 inches from Orissa to Champaran, and so on.

Compared with the normal falls, it will be found that in Kuch Bihár and its neighbourhood, excessive falls have occurred in some cases, the falls being 20 and 30 inches more than usual. If a line be drawn from about Backergunge in a north-westerly direction up to about the north of Bhágalpur, it will be found that most of the stations to the east of this line have received falls in excess of the normal amounts, while to the west of the line defective

falls have occurred. The defects, however, as a rule, do not much exceed two inches, and a large area indeed is shown where the defect is not larger than one inch.

The areas of largest defect are to be found in the Sonthal Parganas over the greater part of Orissa, and at one or two stations in North Bengal such as Saugor Island and Patuakhali.

The following table gives full data for the comparison of the actual and the normal rainfall of the month of May in all districts of the province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third in a slightly different form, stating as a percentage how much the district rainfall of the month varied in excess or defect from the normal:—

Percentage Table for May 1892.

Division.	District.	Normal district rainfall for May.	Actual district rainfall for May 1892.	Percentage of actual to normal rainfall.	Percentage excess (+), defect (−).

* Means of 4 days. | † Mean of 5 days. | ‡ Means of 6 days.

Explanations—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last

The *humidity* of the atmosphere is expressed as percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 11th of June 1892.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least ·1 inch of rain has fallen.

CALCUTTA, *the 14th June 1892.*

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 11TH OF JUNE 1892.

ON the last few days of the previous week a rapid increase of pressure had taken place in Bengal and pressure had become largely in excess of the normal, so that the pressure distribution had become very unfavourable for the advancement of the monsoon current and the setting in of the rains over Bengal, though as stated in the report of the previous week, the monsoon current had advanced well into the north of the Bay. On the 4th, however, a reaction had set in and pressure began to fall, and this fall continued on the 5th and 6th, and on the latter day the distribution of pressure became very irregular, and the lowest pressures were reported at Gopalpore and Puri. In addition, too, pressure had become below the normal over the Bay, while slight excess pressure was still recorded in Bengal. Wind directions at the coast stations in the north of the Bay were decidedly irregular, and in Bengal at most stations winds had become easterly. On this day some exceedingly heavy rainfalls were reported in North Bihár and North Bengal, but over the remainder of the province only a few local showers fell. On the 6th, so far as could be detected, there was no sign of any cyclonic circulation of winds in the north of the Bay, and certainly no storm had formed, though perhaps in some parts of the Bay weather may have been a little squally. On the morning of the 7th pressure had again fallen moderately to rapidly, and pressure had become below the normal by amounts which ranged up to nearly a tenth of an inch along the west coast from Gopalpore to Madras. Winds also at the stations on the Circars and Orissa coasts began to show the commencement of a cyclonic circulation, though they were very light in all cases. The lowest pressures reported on this day were at Puri and Gopalpore, and it was evident that a barometric depression had formed, and its position, so far as can be at present roughly judged, was in about latitude 17° or 18° N. and perhaps longitude 88° E., but until the observations from the vessels navigating the Bay have been received and worked out, the precise position of the formation of the storm cannot be accurately given. On the 7th the winds over Bengal became mainly easterly and south-easterly, and may have been influenced by the developing whirl or depression, but this is scarcely probable. Moderate to heavy rain was reported on this day from many of the Bengal stations. On the 8th the storm in the Bay had undergone further development, a rapid fall of pressure had taken place in the north-west angle of the Bay, and in Orissa and at such stations as False Point, pressure had become more than a fifth of an inch below the normal. The cyclonic wind circulation as indicated by the observations at the coast stations had also advanced northwards, and the centre of the storm was at 8 a.m. probably to the east of Puri or Gopalpore. The storm had undoubtedly developed very considerably in the day and was already of moderate severity. From the 8th to the 9th at 8 a.m. the storm developed in intensity with extraordinary rapidity and had become a fierce cyclone, and it had also again advanced slowly in a northerly direction and was probably a little to the south of east of False Point. The increase in intensity may be judged by the fact that there had been a fall of a quarter of an inch in the pressure at False Point, and pressure there was about half an inch below the normal. The position of the cyclone can be fortunately fixed in the afternoon and evening of the 9th, for the Meteorological Department has been favoured with a report by Mr Milner, Senior Branch Pilot, who was on board the P. V. *Sarsuti*, which experienced the storm and which passed through the calm centre, and extracts from whose report are given below. The *Sarsuti* it appears entered the calm centre of the cyclone from the north-eastern quadrant between 3 p.m and 4 p.m. of the 9th, and was in it until nearly 7-30 p.m. The position of the *Sarsuti* at this time is given as 55 miles E. by N. of False Point, so that again the storm had moved in a northerly direction, and its centre was about 80 miles from, and almost due south of, the mouth of the Hooghly, and considering the direction in which the storm had been moving on the 7th and 8th, which, so far as can be judged, was almost due north, it appeared highly probable that the storm would reach the mouth of the Hooghly, and might possibly subsequently advance up the basin of the Hooghly towards Calcutta. During the evening and night of the 9th the rate at which the storm was moving must have increased very rapidly, and the storm must also have commenced to recurve towards the west, for at 11 p.m. of the 9th the centre was to the south-south-west of Saugor Island and about 45 miles only from the mouth of the Hooghly, so that it had moved 35 miles in 5 or 6 hours. At 2 a.m. of the 10th it was to the west-south-west of Saugor Island, and at 5 a.m. it was almost on the coast line between Calcutta and Balasore. So far as can be ascertained, the storm centre crossed the coast between Balasore and Saugor Island at about 6-30 a.m. on the 10th, and nearer the former station than the latter. As the distance between the mouth of the Hooghly and Balasore is not more than about 50 to 60 miles, the storm could only have passed about 40 or 45 miles to the west of the mouth of the river. In passing it may be remarked that the great Calcutta cyclone of 1864, which caused the storm wave in the Hooghly and the consequent enormous destruction of shipping and property, crossed the coast a little to the west of the mouth of the Hooghly, and the point at which the storm which is now being described

struck the land was probably not more than 30 miles to the west of that of the 1864 cyclone. The difference between the paths of the two cyclones was this, that in the present year the storm commenced to recurve to the west as it approached close to the head of the Bay, and that when it reached the land it recurved still more rapidly to the west and took up a west-north-westerly direction, which carried the storm rapidly away from Calcutta. On the other hand, the storm of 1864 continued in its northerly course after reaching the land, and later on recurved slightly towards the east, thus bringing it nearer to Calcutta, though the centre of the cyclone of 1864 was never nearer than 30 miles to the west of Calcutta.

The storm having crossed the coast a little to the east of Balasore about 6-30 a.m. of the 10th, when the extraordinarily low pressure of 28·670 inches was registered, it advanced in a west-north-westerly direction, and at 8 a.m. the centre was to the north or north-west of Balasore, when a pressure of 28·731 inches was registered. From the 10th to the morning of the 11th the storm continued its west-north-westerly advance, and the centre was on this day apparently in the south-west corner of Chota Nagpur, but as there are no meteorological observatories in the immediate neighbourhood of this area, it is impossible to state its position with certainty. The rapidity of the advance of the storm on this day was also very much greater than it had been, and while from the morning of the 9th to the 10th the distance travelled by the storm cannot have been more than 90 to 100 miles, from the 10th to the 11th it had travelled over probably 250 miles, and thus had more than doubled the rate of its advance.

The strength of the storm may be judged by the excessively low pressures registered at all the coast stations in the north-west angle of the Bay during the advance and passage of the storm which were much lower than during the passage of any storm during recent years, and notably by the pressure at Balasore at 6-30 a.m. on the 10th of 281·670 inches. Exceedingly strong winds also prevailed in the neighbourhood of the storm, and for a long distance to the east and south of it. At Balasore during the early morning of the 10th winds were reported to be of hurricane force. Up to the present time the only report of any vessel which was involved in the storm which has reached the Meteorological Department is that of the *Sarsuti* sent in by Mr. Milner above referred to, and his description of the weather experienced near the centre of the storm may be briefly stated:—"The wind kept at S.E. and E.S.E. till 3 p.m. (of the 8th), when it died away to a calm; it had been blowing a moderate gale; wind was very light until 7-30 p.m., when it began to freshen, and became very violent at 9 p.m. from the W.S.W.; it was most furious at midnight to 1 a.m. (of the 9th), when it seemed doubtful if the masts would not be blown out of the vessel, the wind being then S.W. It is doubtful if the wind was not as strong as in the cyclone of May 1887 (when the *Sir John Lawrence* and the *Retriever* were lost), at which time I was on board the P V. *Cassandra* and nearly in the same position. On this occasion the vessel was under bare poles." The lowest pressure recorded during the calm centre in the *Sarsuti* was about 28·8 inches, which being reduced for temperature and gravity would be probably about 28·6 inches. The cyclone, then, was undoubtedly one of the fiercest of recent years, and in addition it affected a very large area, and the bad weather accompanying it extended even to such stations as Chittagong, Akyab, and Diamond Island to the east and south-east, and to Coconada on the south-south-west of the storm.

Pressure.—Owing to the formation and advance of the cyclone, pressure has been rather largely in defect of the normal in all districts; the mean defect is largest at Balasore, where it equals 0·195″, and it generally exceeds a tenth of an inch in the south-western districts, but the defects are comparatively small in the north of the province, where at such stations as Purnea, Darbhanga, and Motihari the defects are only one or two-hundredths of an inch.

Temperature.—Owing to the heavy rainfall, temperature has been below the normal in all districts except East Bengal, the defects equalling 4° and 5° in South Bihár and Chota Nagpur, and 2° and 3° degrees in Orissa and South-West Bengal and North Bihár. In Assam and in East Bengal temperature has been about 1° above the normal.

Rainfall.—Exceptionally heavy rain was brought up by the cyclone to parts of Orissa, and on the 10th, False Point reported 11·27 inches, while for the week this station has received 17·20 inches. Several other stations also reported falls of about 10 inches and upwards during the week. Rainfall has therefore been in very large excess of the normal in Orissa, and in large excess in Chota Nagpur and Bihár. In South-West Bengal about a normal fall has occurred, but owing to the indraught towards the storm, the rainfall in East and North Bengal has been lighter than usual, and the falls do not amount to more than about half the normal.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 11th of June 1892:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1892.

BIHÁR INDUSTRIAL SCHOOL.

GENERAL DEPARTMENT—EDUCATION.

Darjeeling, the 13*th June* 1892.

RESOLUTION No. 1696.

READ again—

The following papers on the subject of the reorganization of the Bihár Industrial School:—

(1). Letter to the Commissioner of the Patna Division, No. 14T.—G., dated the 2nd November, 1891.

(2). Letter from the Commissioner of the Patna Division, No. 157Ct., dated the 21st February, 1892.

(3). Letter to the Commissioner of the Patna Division, No. 675, dated the 12th March, 1892.

Read also—

Letter from the Commissioner of Patna, No. 306G., dated the 19th April, 1892, and its enclosures.

To commemorate the visit of His Royal Highness the Princp of Wales to Bankipore, a fund was raised by subscriptions for the purpose of founding an Industrial School at that station. A school was accordingly opened in March, 1879, but was closed after a short period. The attention of the Lieutenant-Governor was attracted during his visit to Bankipore, in November, 1891, to the existence of the Bihár Industrial School Committee and of the fund for which they are Trustees for the promotion of technical education. So far as His Honour was able to gather, there appeared to be some uncertainty as to the

measures which should be adopted for this purpose, and a difficulty in determining a scheme of operations. But Sir Charles Elliott considered it undesirable that no definite action should be taken when there was a large sum of money available. The Commissioner was therefore requested to submit a workable scheme for the establishment of a Bihár Industrial School, after consulting the Director of Public Instruction and the Principal of the Sibpur College.

2. Accordingly, a scheme has been prepared by Mr. J. S. Slater, Principal of the Sibpur College, which, with some slight modifications, has been accepted by the Committee and laid before the Lieutenant-Governor. The main feature of the scheme is the division of the proposed school into two distinct departments. The higher or Apprentice department is intended to aim at training lads to qualify for admission to the 3rd-year class of the Sibpur College, Apprentice Department, where, during a residence of three years, they would be trained to become Foremen Mechanics and Upper Subordinates. The instruction in this Department will be in English. The lower or Artisan department is meant to turn out skilled workers in wood and metals, with an elementary knowledge of drawing and estimating. The medium of instruction will be the vernacular. Training will be provided for 72 apprentices and 36 artisans. The object of both departments will be to qualify boys for further training at the Sibpur College.

3. The scheme has not yet been completed in every detail, but the following proposals, which have been made for the regulation of the two departments and are approved by the Lieutenant-Governor, will show its general scope:—

A.—Apprentice Department:—

Apprentice Department.

(1) The qualification for admission is to be a certificate from the headmaster of a zillah school under public management, stating that the candidate has been promoted at least to the second class in the school.

(2) Twenty-four boys, or two from each district in Bihár, using the word in its widest sense, will be admitted annually. They must be under sixteen years of age. A certificate of good conduct will be required, and all candidates must be passed by a Civil Surgeon as physically fit for work in the shops. The instruction will, at least for the present, be free, and District Boards will be invited to provide scholarships of (say) Rs. 5 per mensem for their nominees.

(3) The course of study will be as follows:—

	1st year.	2nd year.	3rd year.
Mathematics ...	Arithmetic, Algebra, Euclid	Algebra, Euclid, Mensuration.	Mensuration, Trigonometry.
Drawing ...	Printing, scales, elementary geometrical drawing.	Orthographic projection ...	Plan drawing.
Engineering ...	Nil.	Building materials ...	Building materials, estimating.
Surveying ...	Nil.	Chain and compass surveying.	Levelling.
Workshops ...	Carpenters' shop	Blacksmiths' shop ...	Fitters' shop.

(4) After a three years' approved course at Bankipore, in July of each year, those apprentices who wish to continue their course will be allowed to go to the Sibpur College to be examined. The examination at Sibpur is to be both theoretical and practical; those who pass may be admitted to the 3rd-year class of the Sibpur College, Apprentice Department, and become members of that institution.

(5) A certain number of scholarships of Rs. 10 a month, tenable for three years, subject to the usual conditions of progress and good behaviour, will be awarded to the best students on their entering the Sibpur College; half the cost of these scholarships will be borne by the Bihár Industrial School Fund, and the District Boards of the districts to which the students belong will be moved to bear the other half of the cost.

B.—Artisan Department:—

(1) The lower primary standard will be required as a qualification for admission to this Department.

(2) Twelve boys will be admitted annually. They must be between the ages of 12 and 16, and of good physique.

(3) The course in this department will consist of three years' practical work, supplemented by elementary instruction in laying out work to full size, and learning the elements of drawing and mensuration. It will be optional for boys to adhere to one trade for the three years, or to adopt the course qualifying for Sibpur. At the end of the three years, those who elect the latter will be at liberty to apply for permission to go to the Sibpur College.

(4) Stipends at the rate of Rs. 3 per mensem will be given to the boys of this department while at Bankipore, and some at least of those who are admitted to the Sibpur College will receive stipends at the rate of Rs. 7 per mensem.

4. In regard to the finance of the scheme, it is proposed that a suitable building should be erected near the site of the present Survey School at an estimated cost of about Rs. 13,200, and that the school should, if possible, be opened in July this year, so that in future years July would be the beginning of the school year, and candidates would go up to Sibpur for examination in that month.

The capital expenditure and working expenses of the school have been estimated as follows, provision being made for 36 boys in each shop (24 apprentices and 12 artisans).

CAPITAL EXPENDITURE.

FIRST YEAR.

Carpenters' Shop.

	Rs.
Tools for 36 boys at Rs. 70 each ...	2,520
Nine carpenters' tables at Rs 50 each ...	450
Two joiners' cramps at Rs. 14 each	28
Two glue-pots at Re. 1-8 each	3
Two grindstones	24
Two wood-turning lathes, with tools	480
Total ...	3,505

Blacksmiths' Shop.

	Rs.
Tools for 36 boys at Rs 30 each ...	1,080
Eighteen anvils at Rs. 50 each... ...	900
Eighteen forges at Rs. 200 each	3,600
Two swage blocks	100
Total ..	5,680
Add ...	13,200 for building
Grand Total ...	22,385

SECOND YEAR.

Fitters' Shop

Tools for 36 boys at Rs. 40 each ...	1,440
Thirty-six vices at Rs. 45 each	1,620
Six fitters' tables at Rs. 50 each...	300
Face plates	168
Total ...	3,528

THIRD YEAR.

No capital expenditure will be incurred, the three proposed shops being fully equipped.

WORKING EXPENSES.

FIRST YEAR.

	Rs.
Head-master at Rs. 80 a month	960
Survey teacher at Rs. 50 a month	600
Two carpenter instructors at Rs. 25 and Rs. 15 ...	480
Materials for 36 boys at Rs. 30 a year	1,080
Petty establishment and miscellaneous expenses ...	500
Stipends to 12 artisans at Rs. 3 a month each ...	432
Total ...	4,052

SECOND YEAR.

As in first year	4,052
One instructor in smiths' shop at Rs. 30 a month ...	360
Eighteen forges at Rs. 20 a forge	360
Materials for 36 boys at Rs. 30 a year	1,080
Stipends to 12 artisans	432
Total ...	6,284

THIRD YEAR.

As in second year	6,284
One instructor in fitters' shop at Rs. 30 a month ...	360
Materials for 36 boys at Rs. 30 a year	1,080
Miscellaneous	500
Stipends to 12 artisans	432
Total ...	8,656

During the fourth, fifth, and sixth years, the working expenses will be increased by the amount of the scholarships awarded to those apprentices, and stipends allowed to those artisans, who may in either case find admittance at the Sibpur College.

5. It is estimated that the capital of Rs. 2,54,385, which is now at the disposal of the Committee, will, after allowing for the interest to be credited and for the capital and working expenses to be incurred, be reduced to Rs. 2,37,578 at the beginning of the fourth year; the income should be Rs. 9,503 a year, and the expenditure Rs. 8,656, thus providing a surplus of Rs. 847 at Bankipore. During the fourth year there would be 24 apprentices and 12 artisans at the Sibpur College; during the fifth year, there would be 48 apprentices and 24 artisans, and in the sixth year the full number of 72 apprentices and 36 artisans would be reached. His Honour is of opinion that it will be sufficient if one-third of each of these sets of youths are allowed scholarships at Rs. 10 each, and stipends at Rs. 7 each respectively: thus the total cost on this account would be—

	Scholarships.		Stipends.		Total.
	Rs.	Rs.	Rs.	Rs.	Rs.
In the fourth year ...	8 × 10 × 12	=960	4 × 7 × 12	=336	1,296
In the fifth year ...	16 × 10 × 12	=1,920	8 × 7 × 12	=672	2,592
In the sixth year ...	24 × 10 × 12	=2,880	12 × 7 × 12	=1,008	3,888

If the District Boards are willing to contribute half the cost of the scholarships, the charge to Government would be reduced to—

Rs.	
816	in the fourth year.
1,632	in the fifth year.
2,448	in the sixth year.

With the Rs. 847 surplus available at Bankipore, the additional charge to be thrown on Government should in no case exceed Rs. 1,600 a year, a sum which His Honour would hope to find by readjustment of the budget of the Educational Department. But His Honour is sanguine that in a few years the success of the

new Industrial School would be assured, and that further endowments would be forthcoming to provide the necessary scholarships.

No credit has been taken in the above scheme for the value of the work done by the students. At first, this would be small, but, after a time, it would probably be sufficient to contribute materially to the cost of the maintenance of the institution.

6. The Lieutenant-Governor is pleased to record his general approval of the scheme of which an outline has been given above, and desires that a prospectus, drawn up on these lines, may be at once issued, and steps taken to have the school opened as soon as possible. A report should be submitted at an early date whether the Patna Survey School cannot be amalgamated with the Industrial School.

7. In order to ensure the success of the project, which His Honour regards as one calculated to do much good to the country, Sir Charles Elliott is pleased to appoint the following gentlemen, whose names will be gazetted, to be members of the Committee of the Bihár Industrial School:—

The Commissioner of the Patna Division, *ex-officio* President.
The Collector of Patna.
The Principal of the Patna College.
The Principal of the Sibpur College.
The Inspector of Schools, Bihár Circle.
The Inspector of Local Works, Patna Division.
} *Ex-officio.*
A. McD. Salmon, Esq., C.E., District Engineer, Patna.
G. W. Küchler, Esq., Professor, Patna College.
Nawab Syad Wilayat Ali Khan, C.I.E.
Maulvi Khuda Baksh Khan, Bahadur.
Babu Nobin Chunder Dey.
" Guru Parshad Sen.
Rai Jay Prokash Lal, Bahadur, C. I. E.
Syad Badshah Nawab.
Maulvi Fazl Imam Khan, Bahadur.
" Abdur Rauf, Shums-ul-Ulama.
Rai Ishri Prosad.
Rai Radha Kishan.

The Lieutenant-Governor will further empower each District Board sending boys with scholarships to the school to select for nomination to the Committee two members whose names will be duly published.

ORDER, ordered that a copy of the Resolution be forwarded to the Commissioner of the Patna Division and the Director of Public Instruction for information.

Ordered, also, that a copy of the Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,
Secretary to the Government of Bengal.

RESOLUTION ON THE ANNUAL REPORT ON THE POLICE ADMINISTRATION OF THE TOWN OF CALCUTTA AND ITS SUBURBS FOR THE YEAR 1891.

POLICE.

Dated Darjeeling, the 17th June 1892.

READ—

The Annual Report on the Police Administration of the Town of Calcutta and its Suburbs for the year 1891.

Read also—

The Reports for the two preceding years, and the Resolutions recorded by Government thereon.

1. Mr. J. Lambert, C.I.E., was in charge of the Police of the Town of Calcutta and its Suburbs throughout the year as Commissioner of Police, and Mr. A. B. Barnard continued to hold the office of Deputy Commissioner, except for the period from the 17th August to 10th October, when he was on privilege leave, and Mr. E. C. Ryland acted for him.

2. *Reported cases.*—The total number of cases, cognizable and non-cognizable, reported during 1891 was 60,440, against 61,542 in 1890; of these, 48,569 were from the Town and 11,871 from the Suburbs. In the Town 27,182 cognizable cases were tried by the Magistrates, of which 24,808 ended in conviction in the Magistrate's Court and 30 at the High Court Sessions. In the Suburbs, of 8,113 cases tried, 7,717 ended in conviction, viz., 7,704 in the Magistrate's Court and 13 in the Sessions Court. This is a creditable outturn of Police work. Of cases under the Penal Code, there was an increase from 8,439 to 8,742 in cognizable offences, and from 6,142 to 7,022 in non-cognizable offences, while miscellaneous cognizable cases rose from 26,592 to 27,893. Miscellaneous non-cognizable cases, on the other hand, fell from 20,369 to 16,783. The increase in cognizable cases is due to prosecutions for public and local nuisances, street nuisances, and cruelty to animals. The figures of cognizable crime under the Indian Penal Code for the years 1889, 1890, and 1891 are 3,712, 3,327, and 3,289 respectively. In the Town there was a decrease of 35 cases, compared with the figures of 1890, in serious offences against person and property: a decrease of 87 in minor offences against property: an increase of 552 in other offences, chiefly cases of street obstruction (section 283, Indian Penal Code) and cases under the Hackney Carriage Act, and an increase of 960 in offences under special and local laws. Out of a total population of 466,450 in the Town proper, including the Fort, the Esplanade, and the Port of Calcutta, 10,763 persons were convicted of offences under the Penal Code during the year.

3. *False cases.*—Fifty-eight false cases were brought in the Town and 18 in the Suburbs, against 43 and 18, the corresponding figures for last year. Thirty prosecutions for bringing false complaints were instituted in the Town, and in 16 cases convictions were obtained. In four of these cases the offenders were sentenced to imprisonment, and in 12 they were fined. Besides these, compensation was granted in 20 other cases under section 552, Code of Criminal Procedure. In the Suburbs prosecutions were instituted in 13 cases, and in two cases the offenders were sentenced to imprisonment, and in two were fined. In no case in the Suburbs was compensation granted. The Lieutenant-Governor hopes that Magistrates will not overlook the power of granting compensation for vexatious prosecution conferred on them by the provisions of the new section 560 (1) of the Indian Penal Code.

4. *Property stolen and recovered.*—The value of property stolen in the Town and Suburbs during the year was Rs. 1,17,901, of which Rs. 68,445, or 58·05 per cent., was recovered. This percentage, in spite of a falling off in the Suburbs, due to one or two large undetected burglaries and thefts, is higher than in any preceding year. In the Town alone the percentage was 63·56, against 56·17 in 1890 and 49·02 in 1889.

5. *Cognizable offences. Town.*—Detailed information regarding the various crimes committed during the year is given in the body of the report, and the Lieutenant-Governor does not consider it necessary to reproduce here more than the most important facts noticed by Mr. Lambert.

In the Town there were seven unimportant cases connected with coins, in which eight persons were arrested and seven convicted, and one case connected with stamps, in which two stamp vendors were fined Rs. 500 each for selling used court-fee stamps. There was one case of murder by poison, in which five coolies of the Chamar caste were poisoned, of whom three died and two recovered. The poison used was aconite, and was administered by two other members of the caste, who were arrested and put on their trial. The evidence against them was not, however, altogether trustworthy, and the jury, under direction of the Judge, acquitted them. There were three other true cases of murder, and one false case, due to a false confession of murder made by a man of unsound mind. In two cases the accused were convicted; in the third the jury returned an inexplicable verdict of not guilty. There were three cases of culpable homicide not amounting to murder, in two of which the accused were convicted. In the third case the accused is still at large. There was one case of alleged rape, in which, however, there was no evidence of any more serious offence than indecent assault, and the accused was discharged. Twenty-five cases of grievous hurt occurred and two of administering stupefying drugs. In one of the latter cases the victim died, and the accused would probably have been convicted of murder but that no poison could be traced. Thirty-six cases of hurt by dangerous weapons were reported, and 22 cases of kidnapping, but only one case of theft of ornaments from a child. The Lieutenant-Governor is glad to notice that 451 children wearing ornaments, who were lost in the streets during the year in the Town and Suburbs, were restored to their parents with their ornaments intact. There were eight cases of causing death by a rash and negligent act, and five of robbery. The true cases of burglary and lurking house-trespass numbered 106, against 154 and 179 in the years 1890 and 1889, and the number of cases detected was 79, against 87 and 109 in the same two years. The number of thefts fell from 1,855 in 1889 and 1,549 in 1890 to 1,495 in 1891; of these, 815 cases were detected. There were 343 cases of breach of trust, including thefts by carters and boatmen; 530 persons were put on their trial for offences under the Gambling Act; and there were 2,849 cases and 2,534 convictions under the Hackney Carriage Act. The number of persons arrested for cruelty to animals was 6,833, and of these 6,521, or over 95 per cent., were convicted.

6. *Non-cognizable offences Town.*—The total number of offences under the Penal Code and under Special and Local Laws, respectively, was 5,357 and 14,829, against 4,454 and 17,461, the corresponding figures for 1890. These figures include one case of an offence against the State under sections 124A and 500, Indian Penal Code, three cases of forgery, nine of extortion, two important cases of cheating, and the celebrated case of criminal breach of trust known as the "Imperial Diamond Case." The first and last of these alone call for special remark. The case under sections 124A and 500, Indian Penal Code, was brought by Government against the *Bangabasi* newspaper for publishing defamatory and seditious articles. The charge under section 500 was abandoned at the trial before the High Court, and in the end the special jury, by whom the case was tried, were unable to agree in their verdict. A new trial was ordered, but the accused having expressed contrition, a *nolle prosequi* was entered, and they were discharged. In the Imperial Diamond Case, Mr. A. M. Jacob, a well-known diamond merchant, was charged by His Highness the Nizam of Hyderabad with criminal breach of trust in respect of 23 lakhs of rupees. He was finally acquitted at the Sessions.

7. *Cognizable offences. Suburbs.*—There were altogether 8,237 cases, against 8,155 in 1890. There were seven cases of murder, two of attempted murder, and two of culpable homicide. The number of burglaries was 132, in 58 of which detection followed, and of thefts 403, of which 203 were detected. The most important case which occurred during the year was that known as the Shambazar riot case. In this case a rumour that the purchase of some land by a Hindu would result in the removal of a temporary building used as a mosque, led to an unprovoked attack on the police by certain Muhammadans of the Shambazar quarter. The police were armed only with batons. One police constable

was killed, and 18 members of the police force were so severely injured as to be incapacitated from duty, while 51 others received slight injuries; while of the rioters, one was fatally injured, and some 50 more wounded more or less severely. The results of the trial of the offenders were unsatisfactory in the extreme. The rioters were put on their trial in three batches. In the first trial, several of the prisoners were convicted. In the second, all were acquitted, the evidence as to identity being somewhat faulty. In the third case, in which the prisoners were almost exclusively men who were wounded in the *mêlée*, and sent direct from the spot to the hospital, and never lost sight of, and as to the guilt of the great majority of whom no unprejudiced person could entertain a doubt, the jury returned a verdict of acquittal, which the Judge, to the Lieutenant-Governor's great regret, accepted, not thinking it advisable to refer the case to the High Court. One result of the riot has been that the police have been armed with more efficient weapons, in case such an emergency should occur again.

8. *Non-cognizable offences. Suburbs.*—There were 3,619 cases, against 4,496 in 1890. There was one case of forgery and three cases of extortion, but no case that calls for special remark.

9. *Suicides and accidental deaths.*—There were 66 cases of suicide during the year, of which 48 occurred in the Town and 18 in the Suburbs; 24 of these suicides were by hanging, and 23 by opium-poisoning. The number of accidental deaths during the year was 308, against 301 in 1890: of these, 36 were those of persons run over by vehicles. Only two fatal cases occurred, in which there was evidence of negligence or rashness on the part of the driver. Ninety-nine persons were prosecuted for rash and furious driving, and 91 were convicted.

10. *European Vagrancy Act IX of* 1874.—Forty-one vagrants were admitted into the Government Workhouse during the year, and 5 were in the Workhouse at the close of 1890, making a total of 46. Of these, 25 were discharged on obtaining employment, seven were released under the first clause of section 16 of the Act, five absconded, two obtained permission to leave the Workhouse temporarily and failed to return, one was imprisoned, one absconded from the ship in which he was to have been deported, and four remained in the Workhouse at the close of the year. During 1890 no inmates of the Workhouse absconded, and the Lieutenant-Governor regrets to notice the falling off in this respect. The total expenditure incurred by Government in working the Act was Rs. 3,725. Sixty-nine seamen, who found refuge in the Alms House, were all shipped during the year.

11. *Fire-Brigade Act IV (B.C.) of* 1883.—The steam fire-engines of the Fire-Brigade were in attendance at 26 fires during the year, against 47 in 1890, and the manual engines kept at the out-stations rendered assistance at 23 other small fires. The only serious fire during the year was on the American ship *Kenilworth* in the Port; this fire was not got under for 4½ hours, and the loss was estimated at Rs. 1,70,000. There were no fires during the year in jute mills or presses. None of the fires was attended with loss of life.

12. *Constitution of the Police Force.*—The total strength of the force was 2,873, as shown on the margin. This is an increase of 13 over the numbers of last year, the increase being due to the entertainment of a Court Sub-Inspector and 12 special constables. The total cost of the force was Rs. 6,22,254, against Rs. 6,14,634 in 1890. The increase is principally due to the payment of heavy law charges from the police grant. The pay in the two lowest grades of officers having been found insufficient to attract educated and respectable men to the ranks in the hope of promotion, was raised during the year from Rs. 10 and Rs. 12 to Rs. 12 and Rs. 16 respectively.

Superintendents	8
Inspectors	50
Sub-Inspectors	7
European Sergeants and Constables	52
Darogas	11
Sergeants	78
Corporals	163
Special Constables ...	51
Constables	2,431
Mounted Police	22

13. *Adjournment of Police cases.*—The Lieutenant-Governor is glad to notice a further decrease in the number of adjourned cases. These fell from 422 in 1889 and 308 in 1890 to 289 in 1891, and of these, 226 cases were disposed of at the second hearing.

14. *Judicial work.*—Mr. A. P. Handley officiated as Chief Presidency Magistrate from the beginning of the year till the 22nd October, when he made

over charge to Mr. Marsden. Nawab Syud Ameer Hossein, C.I.E., was in charge of the Magistracy of the Northern Division throughout the year, except for one month when he was absent on privilege leave, and his place was taken by Maulvi Abdul Jubbar, Khan Bahadur.

The following table shows the work done in the Courts of the Chief Presidency Magistrate, the Magistrate of the Northern Division, and the Honorary Magistrates respectively :—

		Cases instituted.	Persons—		
			Brought to trial.	Acquitted or discharged.	Convicted or committed.
Court of the Chief Presidency Magistrate.	Cognizable offences	11,832	17,700	879	16,771
	Non-cognizable offences ...	1,997	1,695	859	829
	Total ...	13,829	19,395	1,738	17,600
Court of the Presidency Magistrate, Northern Division.	Cognizable offences	14,315	18,757	599	18,146
	Non-cognizable offences ...	3,245	1,584	718	860
	Total ...	17,560	20,341	1,317	19,006
Court of the Honorary Magistrates, Calcutta.	Cognizable offences	1,035	1,458	310	1,148
	Non-cognizable offences ...	14,944	8,756	4,213	4,536
	Total ...	15,979	10,214	4,523	5,684

This table includes, besides strictly criminal cases, miscellaneous cases connected with maintenance, with forfeiture of recognizance bonds, and with the possession of immoveable property, decided by the Magistrates under special sections of the Criminal Procedure Code. Of the statements attached to the Magistrates' reports, Crime Statement, Parts I and II, includes such miscellaneous cases, and also shows cases which are struck off owing to the non-appearance of the parties. The Annual Criminal Statement 2 excludes all these, but shows the result of cases committed to the Session, together with those of cases disposed of in the Magistrate's Court. Any inter-comparison between the two statements is therefore impossible.

The percentage of convictions and acquittals to the whole number of persons brought to trial in the three Courts in cognizable and non-cognizable cases, respectively, is as follows:—

	Cognizable offences.		Non-cognizable offences.	
	Acquittals.	Convictions.	Acquittals.	Convictions.
Court of Chief Presidency Magistrate ...	4·9	94·7	50·6	43·0
Ditto Magistrate, Northern Division ...	2·9	96·7	45·3	54·2
Ditto Honorary Magistrates ...	21·2	78·7	48·1	51·8

The Lieutenant-Governor has no desire to judge of the character of the work done merely by these proportions, but the figures would seem to show that more care is taken in sifting complaints in the Northern Division Court than in the others.

15. *Court of Chief Presidency Magistrate.*—In the Court of the Chief Presidency Magistrate, 13,829 cases, in which 19,395 persons were implicated, were instituted during the year. Of the accused persons, 1,738 were acquitted or discharged, 17,576 were convicted, 24 were committed for trial, and 51 were under trial at the end of the year.

The total number of persons charged under the Indian Penal Code was 7,110, of whom 6,182 were convicted. Under the Cruelty to Animals Act, 1,944 cases were instituted, and of the 3,912 persons concerned in them, 3,630 were convicted. Fifteen persons were brought up under the European Vagrancy Act, of whom 13 were sent to the Government Workhouse and two discharged. Only 170 persons were charged under the Merchant Shipping Act, against 386 in 1890; of these 152 were convicted, 14 discharged, and 4 were under trial at the end of the year. Of nine persons concerned in eight cases under the Excise Act, six were convicted and three discharged, and of five persons in three cases under

the Opium Act, three were convicted and two acquitted or discharged. Substantive sentences of imprisonment were passed on 419 persons, 77 were imprisoned in default of payment of fine, and 5 imprisoned in default of furnishing security for good behaviour. The number of prisoners sentenced to flogging was 33, but in no case did the sentence exceed 20 stripes. Three juvenile offenders were sent to the Reformatory School at Alipore. The total value of the fines imposed during the year was Rs. 30,591, of which Rs. 28,776 were realized. There were 46 appeals against the orders of the Chief Presidency Magistrate during the year, all of which were rejected. The High Court was moved to set aside orders of the Magistrate in five cases. In two of these the application was rejected, and in one the rule was discharged, one conviction was set aside, and one re-trial ordered.

16. *Northern Division Court.*—In this Court 17,560 cases were instituted during the year, against 15,056 in the year 1890, and the number of persons brought to trial was 20,341 as compared with 18,420. Of these, 1,317 were acquitted or discharged, 18,985 were convicted, and 21 committed to the High Court Sessions in 20 cases. Of the 21 persons committed to the Sessions, three were charged with murder, one with attempted murder, one with culpable homicide, five with burglary after previous convictions, ten with theft after previous convictions, and one with extortion. Eighteen of the prisoners committed were finally convicted, two were awaiting trial at the end of the year, and only one was discharged—an extremely satisfactory result. During the year 717 persons were sentenced to imprisonment and 24 to whipping. Eight juvenile offenders were sent to the Reformatory School at Alipore. The total value of fines imposed during the year was Rs. 33,902-8, out of which Rs. 32,672-8 were realized. Thirty-five persons were sent up during the year under the European Vagrancy Act, of whom 26 were sent to the Government Workhouse, and 9 were imprisoned for violating the Workhouse rules. There were 2,159 cases of cruelty to animals, against 1,596 in 1890. Of the 2,773 persons implicated in these cases, 2,754 were convicted and 19 discharged.

Twenty-two persons were charged in twenty cases with offences under the Excise laws, all of whom were convicted. Cases under the Opium Act fell from 45 in 1890 to 21 in 1891, and of 22 persons put on their trial in these cases, 18 were convicted and 4 acquitted or discharged. Out of 113 appealable sentences passed in this Court, 77 were appealed against, but in every case the appeal was rejected—an excellent record. The High Court was moved to set aside orders of the Court in 8 cases, in 4 of which the application was rejected, in 2 convictions were set aside, and in 2 a re-trial was ordered.

17. *Honorary Magistrates' Court.*—The Lieutenant-Governor is glad to notice that the Chief Presidency Magistrate speaks in high terms of the assistance rendered to him and to his colleague during the year by the Honorary Magistrates, and is able to report that these gentlemen have as a body taken great interest in the discharge of the duties entrusted to them by Government, and have of late shown an increasing desire to keep their files clear and avoid unnecessary adjournments. Mr. Handley, however, has to repeat the complaint made last year of absence without notice, or on insufficient notice, of Honorary Magistrates invited to attend the Bench. The number of attendances during 1891 was 1,038 to 1,538 invitations issued. Out of 91 Magistrates invited, 84 attended at least once. The report for last year does not show the number of times each Honorary Magistrate was invited to attend, and any comparison is therefore impossible. Two Courts presided over by a single Magistrate sat on alternate days—one for the trial of criminal and the other for the trial of municipal cases. Benches of three, or sometimes two, Magistrates sat three times a week for the disposal of criminal cases, and special Benches were convened as occasion required. Six hundred and eighty-eight cases were transferred to the Bench and 1,188 to Magistrates sitting singly. From the figures given in statement, Parts I and II, attached to the report, the result of these cases, excluding municipal cases, appears to have been as follows:—

	Cases instituted.	Persons— Brought to trial.	Convicted.	Discharged or acquitted.
Cognizable cases ...	1,035	1,458	1,148	310
Non-cognizable cases ...	844	1,389	459	924

Of the cognizable cases, the proportion of convictions was highest in the case of offences under the Hackney Carriage Act, of public and local nuisances, and of miscellaneous street offences, in which, out of 72, 346, and 328 persons put on their trial, 67, 316, and 322 respectively were convicted. Of 115 persons prosecuted under the Port Acts all were convicted, as were 137 out of 148 persons prosecuted for cruelty to animals. On the other hand, of 37 and 29 persons put on their trial for serious and minor offences against the person, 35 and 25 respectively were acquitted or discharged, while of 330 persons tried for minor offences against property, 188 were acquitted or discharged, and only 142 convicted. In the case of non-cognizable offences, excluding offences under the Calcutta Municipal Act II (B.C.) of 1888 (which is wrongly described in the Crime Statement, Part II, as the Conservancy Act IV (B.C.) of 1876), the number of acquittals largely exceeded that of convictions. This would appear to indicate that sufficient care is not taken in examining complaints preliminary to the issue of process, and that many persons are unnecessarily brought into Court, and the Lieutenant-Governor trusts that, if there has been any such want of care, it may be avoided in future. Of the offenders convicted by the Bench, 166 persons were sentenced to rigorous imprisonment, 7 to simple imprisonment, 13 were whipped, and 1,299 fined. The total amount of fines imposed was Rs. 4,809, of which Rs. 4,401 were realized. There were seven appeals against the decisions of the Honorary Magistrates: in four of these the applications were summarily rejected, and in three the appeals were dismissed after hearing. In eight cases the High Court was moved to set aside orders passed by the Honorary Magistrates: in two of these cases the convictions were quashed, in one a retrial was ordered, in three the applications were rejected, and in two the rule was discharged. The Lieutenant-Governor is pleased to notice that there were very few cases of adjournments during the year. Out of 934 police cases, adjournments were granted in 25 only, and in 21 of these there was only one adjournment. In all cases the Chief Presidency Magistrate reports that the adjournments were granted on reasonable grounds.

18. *Municipal cases.*—Except for 10 cases, in which 13 persons were concerned, all of whom were convicted, which were tried by the Magistrate of the Northern Division, cases under the Calcutta Municipal Act all fall upon the Honorary Magistrates. The following table gives the figures relating to these cases for the past two years:—

	Number of cases—		Number of persons—			
	Instituted.	In which process issued.	Against whom process issued.	Who actually appeared before the Court.	Acquitted or discharged.	Convicted.
1890	16,820	16,704	16,705	7,532	2,710	4,821
1891	14,100	14,006	14,006	7,367	3,289	4,077

The sections of the Act under which these cases are instituted are not shown in the report, and the Lieutenant-Governor desires that this information may be given in future years. From a report furnished by the Chairman of the Corporation, it appears that by far the greater number of these cases are license prosecutions. The reduction in the number of cases is explained to be due to the introduction of rules in the Municipal Office by which more warning than in former years is given to defaulters before prosecutions are instituted, but cases once instituted are not without good cause withdrawn on mere payment of the sum with regard to which default has been made. A large proportion of the acquittals is understood to be due to the discharge with a warning of defaulters in whose cases the Magistrates considered that the infliction of the minimum punishment allowed under the Act would be an unduly

severe punishment. During the year 6,733 cases were struck off or withdrawn. The fines levied in the cases amounted to Rs. 24,052, of which Rs. 18,958 were realized. The Chief Presidency Magistrate reports that the non-realization of the balance of Rs. 5,094 is almost entirely due to the inability of the police to trace defaulters, and suggests that this might be avoided if the municipal employés would render more assistance to the police in this particular.. The Lieutenant-Governor invites the attention of the Chairman to this remark.

19. The Lieutenant-Governor desires again to acknowledge the efficient administration of the Metropolitan Police Department by Mr. Lambert, and that of the Magistrates' Courts by Mr. Handley and Nawab Syud Ameer Hossein, C.I.E. The names of the subordinate officers commended by Mr. Lambert have been noted.

By order of the Lieutenant-Governor of Bengal,

H. J. S. COTTON,

Offg. Chief Secretary to the Govt. of Bengal.

DISTRICT ROAD FUND.

No. 3084R.C.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Road Cess.

Dated Calcutta, the 17th June 1892.

RESOLUTION.

READ—

Letter from the Accountant-General, Bengal, No. 261L.F., dated the 6th June 1892, submitting an abstract of receipts and expenditure of the several District Road Committees in Bengal, for the quarter ending 31st March 1892.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees in Bengal for the 4th quarter of the year 1891-92 be published in the *Calcutta Gazette*, and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette.*

Ordered also that a copy of this Resolution and of the abstract referred to, be forwarded to the Commissioners of the Rajshahi, Bhágalpur, Chittagong, and Chota Nagpur Divisions; to the Superintending Engineers of the Northern and Western Circles; to the Inspector of Works, Eastern Circle, and to the Financial Department of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

W. B. GWYTHER,

Under-Secretary to the Govt. of Bengal.

R. B. HAMILTON,

Offg. Accountant-General, Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 18th June, 1892.

Division	No.	District and date of return.	Rainfall at Sadar Station in inches	Character of the weather and state and prospects of the crops.
BENGAL.				
BURDWAN DIVN.	1	Burdwan June 18, '92 Kalna ... Katwa ... Raniganj ...	1·92 1·54 0·42 4·17	Except in Raniganj, the rainfall has been rather scanty, but sufficient for the present. *Aus* sown in most places. *Aman* being sown. Prospects favourable. Price of rice still high. Common rice at— Srs. Burdwan ... ... 11 to 16 per rupee. Kalna ... ... 9 to 13 per rupee. Katwa ... ... 12½ per rupee. Raniganj ... ... 13 per rupee.
	2	Bankura „ 18, '92 Vishnupur ...	5·02 2·15	Weather—rainy till yesterday (17th), since cleared up. Sufficient rainfall during the week. Transplantation not yet commenced. Sugarcane and other standing crops doing well. Supply of fodder and water sufficient. Cattle-disease reported. Ordinary rice selling at 13½ seers per rupee at Sadar and 14 seers at Vishnupur.
	3	Birbhum „ 18, '92 Rampur Hât ...	4·96 1·32	Very heavy rain in Sadar subdivision. Sufficient rain in north. Ploughing and sowing going on briskly. Fodder and water plentiful. State of cattle normal. Common rice dearer: 12 to 14 seers per rupee.
	4	Midnapore „ 18, '92	3·01	Weather—much cooler owing to rain. Ploughing going on vigorously. Sugarcane doing well. Favourable reports are received about the indigo crop. Fodder is plentiful now. There is an abundant supply of water everywhere. Prices of common rice:— Srs. Sadar ... ... 13 per rupee. Contai ... ... 12 per rupee. Tamlúk ... ... 12 per rupee.
	5	Hooghly „ 18, '92 Serampore ... Jahánabad ...	1·03 2·01 2·43	Weather—cooler: cloudy with slight showers. Jahánabad is more advanced than Serampore and Hooghly, but everywhere ploughing and sowing have made considerable progress. Crops promise well though the harvest will be late. Fodder and water-supply adequate. Prices of common rice:— Srs. Sadar ... ... 10 per rupee. Serampore ... ... 10 per rupee. Jahánabad ... ... 13 per rupee.
	6	Howrah „ 18, '92 Uluberia ...	2·82 3·64	Weather—seasonable. Ploughing and sowing continue. Jute and paddy growing. Condition of cattle good. Fodder and water-supply sufficient. Rice 10 to 12 seers per rupee.
PRESIDENCY DIVN.	7	24-Parganas „ 18, '92	2·06	Weather—hot and cloudy with occasional showers. Sowing of *aus* and jute proceeding. The rain has done much good to the young plants which have already appeared. Prospects greatly improved. Rice selling at from 10 to 11½ seers per rupee. No want of fodder or water. No cattle-disease.
	8	Nadia „ 18, '92 Kushtia ... Meherpur ... Ranaghat ... Chuadanga ...	1·57 1·17 1·39 1·56 0·38	Weather—hot and cloudy with occasional showers. Agricultural prospects good. Standing crops doing well. Common rice sells at from 10 seers 8 chitaks to 13 seers 5 chitaks per rupee. Condition of cattle good, and supply of fodder and water sufficient.
	9	Khulna „ 18, '92 Bágerhat ... Satkhira ...	2·54 4·10 3·08	Weather—showery with short breaks. *Aus* seedlings thriving. Ploughing and sowing of *áman* going on. Reaping of *til* in Bágerhat completed; outturn estimated at 12 annas. Common rice selling at from 11 to 14 seers per rupee. Fodder and water sufficient.
	10	Jessore „ 18, '92 Jhenida ... Magura ... Narail ... Bangaon ...	3·38 2·75 1·09 2·80 0·98	Weather—cloudy and rainy. *Aus, áman*, jute and indigo doing well. Fodder and water plentiful. Price of rice stationary.
	11	Murshidabad „ 18, '92	3·19	Weather—cloudy and hot at times with showers. *Bhadoi* rice and jute doing well. Recent rain has done much good to sugarcane and mulberry. Coarse rice sells at 11 seers per rupee. There is a sufficient supply of fodder for cattle.
CHITTAGONG DIVN.	12	Chittagong „ 18, '92	2·57	Weather—seasonable. Prospects of crops good. Rice being transplanted. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
	13	Noakhali „ 18, '92 Fenny ...	6·87 4·56	Weather—cloudy and rainy. The late rain will be favourable to the *aus* plants which are in the field, as well as to the sowing of both *aus* and *áman*. Fodder and water ample. Price of coarse rice has become dearer than what it was last week.
	14	Tippera „ 18, '92	0·17	Weather—hot, cloudy and damp. Crops thriving. Prospects most favourable. Cattle-disease abating. Price of rice high.
	15	Chittagong Hill Tracts. „ 16, '92	0·55	Weather—cloudy and sunny throughout the week. Rainy this day day (16th). *Jum* paddy and cotton progressing. Lands are being ploughed for late rice crop. Common rice selling at 9 seers 12 chitaks per rupee.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—concld.			
DACCA DIVN.			
16	Dacca June 18, '92	0·79	Weather—cloudy and rainy. Rains were heavy at Narayanganj and Munshigan Jute and paddy thriving. Transplantation of rice going on. Prospects of standing crops good. Fodder available. No cattle-disease. Common ric selling at from 12 to 14 seers per rupee.
17	Faridpur „ 18, '92	1·60	Weather—cloudy and occasionally rainy. Paddy, jute and sugarcane doing well. Common rice selling at 11½ seers per rupee at Sadar, 12 seers at Goalundo, and 13 seers at Madaripur. Condition of cattle good. Fodder available.
18	Backergunge „ 18, '92	1·53	Weather—rainy and cloudy. State and prospects of crops satisfactory. Ordinary rice sells at from 10 to 13 seers per rupee. Fodder and water sufficient.
19	Mymensingh „ 18, '92	2·84	Weather—hot and cloudy and sometimes rainy Prospects of crops fair. Jute and *aus* now thriving, although damaged in some parts by excessive rain. Supply of fodder and water sufficient. Prices stationary.
RAJSHAHI DIVN.			
20	Dinajpur „ 18, '92 Thakurgaon ...	1·18 1·30	Weather—hot, cloudy and rainy. Jute and *bhadoi* have been sown to the extent of 16 annas. Prospects continue good. Preparation of lands for *haimanti* in progress. Price of rice at Sadar 10¾ seers per rupee, that at Thakurgaon stationary. Condition of cattle good. Fodder and supply of drinking water sufficient.
21	Rajshahi „ 18, '92 Nator .. Nowgong ...	2·63 4·53 1·28	Weather—seasonable and rainy. *Boro* rice is being harvested with good outturn everywhere. *Aus*, jute and *áman* cultivation satisfactory everywhere. Drinking water and fodder ample. Price of common rice from 11 to 15 seers per rupee.
22	Rangpur „ 18, '92 Gaibanda ... Kurigaon ... Nilphamari ...	2·06 0·80 0·80 0·49	Ordinary monsoon weather. Prospects of *aus* paddy and jute favourable. Price of common rice stationary.
23	Bogra „ 18, '92 Sherpur ... Naukhila ...	1·54 2·70 0·99	Weather—seasonable. Light rain early in the week followed by heavy rain on the 16th, 17th and 18th. Prospects of all standing crops good. Some of the *aus* and jute is already being cut. Preparation of lands for *áman* almost completed and some transplanting has begun. The outturn of *aus* and jute should be about 18 annas if all goes well in the next three months. The price of common rice has risen slightly, and 12½ seers are now obtainable for a rupee.
24	Pabna „ 18, 92	2·16	Weather—hot and rainy. Prospects of standing crops continue good. Weeding still continues. Price of common rice 12 seers per rupee. Condition of cattle good. Fodder and water-supply sufficient.
25	Darjeeling „ 18, 92	4·06	Weather—rainy with occasional breaks. *Bhutta* and *bhadoi* rice coming to perfection. *Chhota marua* progressing favourably. Potatoes being harvested. Cattle-disease in some parts of the hills. Water and fodder-supply sufficient. Common rice 9 seers per rupee at Darjeeling.
26	Jalpaiguri „ 18, '92	6·15	Weather—hot. Condition of *bhadoi* paddy improving. Jute has suffered owing to heavy rain. Ploughing has commenced for transplanting *áman*. Price of rice high all over the district, especially in Alipur subdivision. No cattle disease. Fodder and water-supply sufficient.
BIHAR.			
27	Monghyr „ 18, '92 Begusarai ... Jamui ...	1·06 1·46 0·94	Weather—cloudy sky with occasional showers; very sultry. Ploughing and sowing going on with vigour since the rains began. The seed sown has germinated and is doing well. Fodder and water becoming plentiful. Coarse rice selling at 10 to 12 seers per rupee.
BHAGALPUR DIVN.			
28	Bhagalpur „ 18, '92 Banka ... Madhipura ... Supaul ...	1·13 1·80 0·62 1·06	Ordinary monsoon weather. Agricultural prospects encouraging. *Marua* and *bhadoi* being sown in the south and transplanted in the north. *Makai* being sown in the south. Standing crops, such as sugarcane, indigo, and the paddy and *marua* sown near wells, reported flourishing. Common rice 11 seers 6 chitaks per rupee.
29	Purnea „ 18, '92 Kishanganj ... Araria ...	1·76 0·96 1·16	Weather—seasonable. *Bhadoi* has germinated well and is promising. *Aghani* sowing nearly finished. Transplantation and weeding in progress. Fodder and water sufficient. Prices of common rice:— Srs. Sadar ... ... 10 to 13 } Kishanganj ... ... 8 to 9 } per rupee. Araria ... ... 12 to 13 }
30	Malda „ 18, '92 Chanchal ... Shibganj ... Gajol ...	1·76 1·78 2·06 0·81	Weather—hot and cloudy with occasional rain. Standing *bhadoi* crops thriving and promising well. Harvesting of *mung* going on. Lands are still being ploughed and prepared for *áman*. Yield of mango 8 annas. Supply of fodder ample. Ordinary rice selling at 9 to 13 seers per rupee.
13	Sonthal Parganas „ 18, 92 Deoghur ... Godda ... Jamtara .. Pakaur ... Rajmahal ...	1·60 1·70 1·42 3·57 1·33 1·82	Weather—cloudy and warm. The rain has done much good. Ploughing and sowing proceeding briskly. Fodder and water-supply sufficient. Rice selling at from 11 to 13 seers per rupee.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
	BIHÁR—*concld.*		
	Patna Division.		
32	Patna, June 18, '92 Barh ... Bihár ... Dinapore ...	0·91 1·67 0·88 0·25	Weather—generally cloudy. Rain has been beneficial for *bhadoi* sowing, and lands are being generally prepared for it. In Barh subdivision water and fodder are now plentiful. In Bihár subdivision the harvesting of *cheena* is in progress. Transplantation of *marua* and sowing of Indian-corn have commenced in several places, and lands are being prepared for paddy. No distress reported. Common rice selling at from 10 to 13 seers per rupee, against 11 to 12½ seers in last week.
33	Gaya, „ 18, '92 Aurangabad ... Nawáda ... Jahánabad ...	2·96 2·59 1·20 0·76	Monsoon weather with a sufficiency of rain except in Jahánabad. Preparation of land for *bhadoi* and winter rice crops commenced. *Marua* nearly ready for transplantation. Sugarcane crop secured by the rain that has fallen. Prices stationary. Common rice selling at 12 seers per rupee at Sadar. Supply of water ample, and sufficient fodder will also soon be available.
34	Shahabad, „ 18, '92 Sasaram ... Bhabhua ... Buxar ..	1·57 5·32 3·21 1·05	Weather—cloudy with high winds and frequent showers. Rainfall in north of district not sufficient for *bhadoi* sowing, elsewhere abundant, and in south quite phenomenal for this season. Prospects generally favourable. Sugarcane, *marua* and Indian-corn flourishing. Lands being got ready for *bhadoi* sowing.
35	Darbhanga, „ 18, '92 Madhubani ... Samastipur ...	2·16 0·65 0·97	Weather—cloudy and close with frequent falls of rain more or less heavy. Rain has enabled paddy and *marua* to be sown, and has benefited all standing crops. *Marua* plants are hardly forward enough yet for planting. Cattle looking well. Fodder freshened by rain. Prices stationary. Common rice 12 seers per rupee at Madhubani.
36	Muzaffarpur, „ 18, '92 Sitamarhi ... Hajipur ..	1·24 0·60 1·35	Weather—rather hot; cloudy at times. Crop prospects good everywhere. All seed sown germinating, ample rain for the present having been received. Prices falling in Sitamarhi and in one part of Hajipur; elsewhere almost stationary.
37	Saran, „ 18, '92 Siwán ... Gopalganj ...	2·04 1·22 3·32	Weather—stormy and disturbed. Heavy storms almost everywhere. *Bhadoi* sowings going on. Standing crops much benefited. Fodder and water now plentiful. Prices of common rice :— Chapra ... ... 11 Srs. 2 Ch. Siwán ... ... 12 Srs. 9 Ch. Gopalganj ... ... 12 Srs. 10 Ch. } per rupee.
38	Champaran, „ 18, '92 Bettiah ...	2·22 3·64	Weather—cloudy and hot. Rain has fallen generally throughout the district and just in time when it was required. It has done a great deal of good. Agricultural operations in progress. Standing crops doing well. No scarcity of fodder and water. Prices stationary.
	ORISSA.		
	Orissa Divn.		
39	Cuttack, „ 18, '92	1·78	Weather—seasonable. Rainfall general and adequate. Ploughing and sowing of *sarad* and *biali* in progress. Price of common rice 9 seers to 15 seers 12 chitaks per rupee. Fodder-supply adequate.
40	Puri, „ 16, '92 Khurda ...	6·52 7·45	Weather—cloudy. Ploughing going on. Sowing has begun in places. Miscellaneous crops doing well. Rice sells at from 10 to 14 seers per rupee.
41	Balasore, „ 18, '92	4·68	Weather—stormy. The cyclone of last week caused extensive floods in the south of the district. Lands being cultivated, and sowing of winter rice begun. Rice sells at from 13 to 15 seers per rupee.
	CHOTA NAGPUR.		
	Chota Nagpur Divn. — *South-West Frontier Agency.*		
42	Hazáribágh, June 18, '92 Giridi ...	5·00 2·98	Weather—seasonable. Sugarcane doing well. Ploughing and sowing in vigorous progress all over the district. Water and fodder sufficient.
43	Lohardaga, „ 18, '92	5·35	Weather—seasonable. Ploughing is being vigorously carried on. Sowing of *bhadoi* crops continues. Winter rice is also being sown. Common rice selling at 14 seers per rupee. Fodder and water-supply sufficient.
44	Palámau, „ 17, '92	5·08	Weather—cloudy and cool. A break seems to have now set in. Good rain reported from all thánas and outposts except Untari, where showers are reported. Ploughing for and sowing of *bhadoi* crops have commenced. Common rice selling at from 12 to 16 seers per rupee. Supply of fodder increasing. Cattle-disease reported from Daltonganj thána.
45	Singhbhum, „ 18, '92	2·80	Weather—seasonable. The rains have set in apparently. Rice crop being sown everywhere. Price of common rice stationary.
46	Manbhum, „ 18, '92 Gobindpur ...	7·22 1·12	Heavy rain during the week. Ploughing still going on. Prospects so far fair. Rice 13 to 16 seers per rupee.

Published for general information.

* Means of 6 days.

Explanation.– Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last [illegible] The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the [illegible] the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fall

for the week ending Saturday, the 18th of June 1892.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district.	Of week. Normal mean.	Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th May 1892. Mean for district.	Since 16th May 1892. Normal mean.	Since 16th May 1892. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen

CALCUTTA, *the 21st June* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 18TH OF JUNE 1892.

THE principal feature in the meteorology of the previous week had been the formation of a cyclone in the north-west angle of the Bay, and its advance first in a northerly direction, then in a north-westerly and finally in a west-north-westerly direction. The centre of the storm had crossed the coast between Saugor Island and Balasore on the early morning of the 10th instant, and on the 11th instant, or the last day of the previous week, the centre was in the extreme south-west of Chota Nagpur. From the 11th to the 12th it continued its north-westerly advance, and the centre at 8 a.m. of the 12th was close to Sutna. At this time its forward movement practically ceased, and on the 13th the centre was still close to Sutna and the storm itself was quickly filling up, and by the morning of the 14th the cyclone had practically filled up and disappeared after having had a life history of about six or seven days. The storm probably rapidly decreased in intensity immediately it began to advance over the land, and particularly when it had to advance through the hills in the south of Chota Nagpur. Strong winds, however, generally prevailed over the province for the first three or four days of the week, and gales of wind were reported from such stations as Hazáribágh and Patna, and later on from several stations in the North-West Provinces and Central Provinces. The storm in its advance naturally brought up a wave of humid winds to Bengal, and for several days in the week fairly general rain was received over the whole province, the rainfall being heaviest on the 12th, 15th, 16th, and 17th, while towards the close of the week the rain-bearing current appeared to diminish in strength, and rainfall became rather lighter. With the inland advance and partial filling up of the storm there was a rapid rebound of pressure in Bengal, and by the 12th even, pressure was considerably in excess of the normal, the rise on this day at many stations exceeding a tenth of an inch. From this date, however, pressure began to fall slowly until the 15th, when there was again a moderate rise; but on the 16th, owing to an increase of pressure having taken place at the north-western stations and a general fall elsewhere, which was moderately large in the centre and south-east of the province, a feeble barometric depression began to show itself over Central Bengal, which was accompanied by a feeble cyclonic circulation of winds with a centre near Berhampore. This feeble depression continued to exist on the 17th, but on the 18th it had almost entirely disappeared, though there was still a feeble circulation of winds over the province. These conditions rather tended to confine the heavy rainfall on the 17th and 18th to the eastern and northern districts, and thus at the close of the week a partial break of the rains was setting in over such districts as Bihár, Chota Nagpur, &c.

Pressure.—With the rapid rebound of pressure which took place in the early part of the week, the mean pressure of the province for the week has been in excess of the normal by amounts which range from nearly a tenth of an inch in Orissa to a general excess of about 0·04" or 0·05" in the north of the province.

Temperature.—With the moderate to heavy rain which has fallen during the week, temperature has been abnormally low, and thus Chota Nagpur shows a mean defect of 7·1° for the week and South Bihár one of 5·1°. General defects of from 2° to 3° have been recorded in Orissa, South-West Bengal, and North Bihár; but, on the other hand, slight excess temperatures have been registered in East and North Bengal, and in Assam the excess rises up to 1·1°.

Rainfall.—General average falls of about three inches are reported in East and North Bengal and Chota Nagpur, a fall of two and-a-quarter inches in South-West Bengal, and of from one to two inches in Orissa and Bihár. The only division in which the falls have been in excess of the normal has been Chota Nagpur, with an excess of 17 per cent. In the other divisions, notwithstanding the rather heavy falls during the week, the defects have been rather large, and thus in South-West Bengal, South Bihár, and East Bengal, defects of aboute 20 to 25 per cent. have been registered, in North Bihár and North Bengal the defects have equalled from 35 to 40 per cent., while in Orissa the very large deficiency of 53 per cent. is registered. Thus taking these divisions to have an equal value in the calculation, the rainfall of the province for the week has been about 26 per cent. below the normal.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 18th of June 1892:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since [illegible] 1892.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The total fall from 1st January to 18th June 1892	11·29
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	16·42

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; lr, lightning reflection; ⌓, dew.

J. H. GILLILAND,

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

Calcutta, the 20th June 1892.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending with Saturday, the 28th May 1892.

The 28th April 1892.

P. C. GHOSHA,
Registrar of Companies.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 25th June, 1892.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
Burdwan Divn.			
1	Burdwan June 25, '92 Kalna ... Katwa ... Raniganj ...	1·26 0·42 0·08 1·64	Weather—very hot. Rain wanted in parts. Sowing and transplanting going on. Prices stationary. Prices of common rice :— Srs. Burdwan ... ... 11 to 14 } per rupee. Kalna ... ... 9 to 13 Katwa ... ... 13 Raniganj 13
2	Bankura „ 25, '92 Vishnupur ...	0·06 0·60	Weather—very hot and occasionally cloudy. Transplantation of *aus* commenced in places. More rain wanted. Other standing crops thriving. No change in prices. Supply of fodder and water gradually increasing with the rainfall.
3	Birbhum „ 25, '92 Rampur Hát ...	Nil 0·68	Weather—cloudy and sultry. A break has occurred in the rains. Ploughing and sowing going on actively. Water and fodder plentiful. Cattle in normal health. Common rice sells at 12 to 15 seers per rupee.
4	Midnapore „ 25, '92	0·06	Weather—very hot in day time. More rain needed. Ploughing going on. Favourable reports are given of sugarcane and indigo crops. Fodder is not scarce, but more rain would be advantageous. Prices of common rice :— Srs. Sadar ... ... 13 } per rupee. Contai ... ... 13 Tamlúk ... ... 12 Ghatál 13½
5	Hooghly .. 25, '92 Serampore ... Jahánabad ...	0·39 0·43 1·04	Weather—has been dry and hot, but has now changed and gives good prospect of rain. Cultivation of both *aus* and *áman* retarded for want of rain. If, however, the change of weather which has just occurred continues, the lee way will be made up. Jahánabad is still best off. Prices of common rice :— Srs. Sadar ... ... 10 } per rupee. Serampore ... ... 10 Jahánabad 12½
6	Howrah .. 25, '92 Uluberia (up to 23rd June)	1·23 0·16	Weather—sultry. Heavy rain on Saturday morning (25th). Paddy promising. Vegetables in good condition. Condition of cattle good. Fodder and water-supply sufficient. Rice 10 to 12 seers per rupee.
Presidency Divn.			
7	24-Parganas „ 25, '92	0·98	Weather—hot and cloudy. Sowing of *áman* continues. Young plants of *aus* and jute thriving. Prospects improving. Prices stationary. Water and fodder sufficient. No cattle-disease.
8	Nadia „ 25, '92 Kushtia ... Meherpur ... Ranaghat ... Chuadanga ...	1·99 1·11 2·59 1·78 0·78	Weather—hot and cloudy. Standing crops doing well. The weather is favourable for weeding operations. Common rice selling at 10 seers 8 chitaks to 13 seers 5 chitaks per rupee. Health of cattle good.
9	Khulna „ 25, '92 Bágerhat ... Satkhira ...	0·30 0·19 0·67	Weather—bright and warm. There was very little rain this week; but rain has recommenced to-day (25th); and if it is sufficient and falls everywhere, much damage will not be done. Rain is, however, urgently required. Common rice is selling at from 11 to 14 seers per rupee. Supply of fodder and water sufficient.
10	Jessore „ 25, '92 Jhenida ... Magura ... Narail ... Bangaon ...	0·85 0·18 1·77 3·51 1·29	Weather—fair and windy. More rain wanted for the standing crops. Prospects good. Weeding going on. Fodder and water for cattle plentiful. Prices steady.
11	Murshidabad „ 25, '92	0·65	Weather—hot and cloudy with occasional showers. Standing crops doing well. Prospects favourable owing to recent rain. Coarse rice sells at 12 seers per rupee. Fodder sufficient for cattle.
Chittagong Divn.			
12	Chittagong „ 25, '92	2·71	Only occasional showers. Prospects of crops fair. Rice is being transplanted. Prices stationary. Condition of cattle generally good. Supply of fodder sufficient.
13	Noakhali „ 25, '92	4·60	Weather—seasonable. *Aman* is still being sown. *Aus* seedlings are thriving. No cattle-disease. Fodder and water sufficient. Prices of common rice :— Srs. Ch. Sadar ... ... 12 2 } per rupee. Fenny 13 8
14	Tippera „ 25, '92	1·79	Weather—damp and cloudy. All standing crops flourishing. *Aus* and jute are being cut in Daudkandi. Prospects favourable.
15	Chittagong Hill Tracts. „ 24, '92	4·72	Weather—hot and cloudy with occasional showers of rain throughout the wee k. *Jum* paddy and cotton progressing. Lands are being ploughed for late rice crop. Common rice selling at 8 seers 15 chitaks per rupee.

	No	District and date of return.		Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concld.*					
DACCA DIVN.	16	Dacca	June 25, '92	Not reported.	Weather—cloudy and rainy. Jute and *áman* paddy doing well. Transplantation of rice going on. Fodder available. No cattle-disease. Common rice selling at from 12 to 13½ seers per rupee.
	17	Faridpur	„ 25, '92	2·44	Weather—very hot since 19th till to-day (25th). State of standing crops good. Harvesting of *til* beginning. Common rice 11½ seers per rupee at Sadar, 12 seers at Goalundo, and 12½ seers at Madaripur. Cattle get fodder. A few cases of cattle-disease reported from the Sadar. Rivers rising.
	18	Backergunge	„ 25, '92	0·74	Weather—hot. State and prospects of crops satisfactory. Ordinary rice sells at from 10 to 13 seers per rupee. Fodder and water sufficient.
	19	Mymensingh	„ 25, '92	4·66	Weather—cloudy and sometimes rainy. The condition of standing crops has improved. Jute and *aus* are now doing fairly well. The supply of fodder and water is sufficient. Prices stationary.
RAJSHAHI DIVN.	20	Dinajpur Thakurgaon	„ 25, '92 ...	1·82 2·08	Weather—cloudy with occasional showers. The break in the rains is now over. A cyclonic storm on the night of the 23rd caused some damage in the town. Prospects of standing crops good. Ploughing for *haimanti* rice going on. Transplantation commenced on low lands. Price of rice has a tendency to rise at Thakurgaon. It is selling at 10 seers 3 chitaks per rupee at Sadar. Condition of cattle good. Supply of fodder and drinking water sufficient.
	21	Rajshahi Nator Nowgong	„ 25, '92	Nil 3·10 3·06	Weather—hot. Cultivation of *aus*, *áman* and jute going on everywhere satisfactorily. Rain wanted for the steeping of jute. Condition of cattle good. Fodder and water sufficient. Price of rice stationary.
	22	Rangpur Gaibanda Nilphamari Kurigaon Ulipur	„ 25, '92	4·67 7·30 0·42 5·98 6·42	Weather—seasonable. More rain wanted in Nilphamari. Transplanting of *áman* and harvesting of *aus* proceeding. Price of common rice stationary.
	23	Bogra Sherpur Naukhila	„ 25, '92	2·18 3·36 6·31	Heavy rain on 18th and 19th; since then weather hot and rainless until night of 24th when rain fell again. The *aus* and jute and other standing crops are all doing well. *Aus*, *káon* and some jute are being cut. Transplantation of *áman* has commenced with favourable prospects. Common rice sells at 12½ seers per rupee.
	24	Pabna	„ 25, '92	1·09	Weather—hot and cool by turns. Prospects of standing crops continue good. Weeding continues. Common rice sells at 12 seers per rupee. Condition of cattle good. Water-supply and fodder sufficient.
	25	Darjeeling	„ 25, 92	3·05	Weather—fair with occasional breaks. *Bhutta*, *fafar* and potatoes being harvested. *Chhota marua* coming to perfection. *Bhadoi* and jute progressing favourably. Cattle-disease in the hills has somewhat abated. Fodder and water-supply sufficient. Price of common rice at Siliguri 10 seers per rupee.
	26	Jalpaiguri	„ 25, '92	5·84	Weather—seasonable and rainy. Condition of *bhadoi* crop (what remains after injury by heavy rain in May) good. Ploughing for *haimanti* rice briskly going on. Transplantation commenced in places. Price of common rice unchanged. Fodder and water sufficient.
BIHAR.					
BHAGALPUR DIVN.	27	Monghyr Begusarai Jamui	„ 25, '92	Nil 0·55 2·41	Weather—very hot and rainless at head-quarters. The rainfall in Jamui has been good, and ploughing and sowing are going on well there. In Begusarai the *bhadoi* lands have all been prepared and three-fourths sown. Indigo is said to be doing well there. Rain is much wanted in head-quarters. Fodder and water for cattle are more available. Coarse rice selling at 10 to 12 seers per rupee.
	28	Bhagalpur Banka Madhipura Supaul	„ 25, '92	Nil Nil 0·60 0·82	The prolonged break in the rains has made the weather extremely oppressive. Sowing and ploughing still going on and *bhadoi* crops doing well. As soon as the break is over, transplanting of *aghani* paddy will begin. Weeding of *bhadoi* has begun. Prospects generally encouraging. Common rice 11 seers 6 chitaks per rupee.
	29	Purnea Kishanganj Araria	„ 25, '92	0·01 1·15 3·35	Weather—unseasonably hot and sultry; cloudy. State of crops satisfactory. The break in the rains has facilitated weeding, but rain is now urgently wanted for the *bhadoi* coming into ear and for transplantation of *aghani* rice. Fodder and water sufficient. Prices of common rice :— Srs. Sadar ... ... 10 to 13 } per rupee. Kishanganj ... ... 8 to 9 } per rupee. Araria ... ... 12 to 13 } per rupee.
	30	Malda Chanchal Shibganj Gajol	„ 25, '92	Nil 0·04 0·40 0·76	Weather—hot and oppressive. Latter part of the week cloudy. Rain much wanted in *thánas* Ratua, Kharba, Tulshihatta, Kaliachuk, and Bamongola. Standing *bhadoi* crops are thriving but suffering for want of rain throughout the district, specially in the *thánas* mentioned above. Supply of fodder ample. Ordinary rice selling at from 8 to 13 seers per rupee.
	13	Sonthal Parganas Deoghur Godda Jamtara Pakaur	„ 25, 92	0·01 2·10 0·12 0·68 1·17	There has been a break in the rains; weather intensely hot and oppressive. No report from Rajmahal. General report is that Indian-corn is coming on well. Godda reports early Indian-corn in the market. A little more rain would be welcome. Cultivation going on generally. Fodder and water sufficient. Price of rice 11½ to 13 seers per rupee.

No.	District and date of return.	Rainfall at Sadar Station in inches.	Character of the weather and state and prospects of the crops.
	BIHÁR—concld.		
	Patna Division.		
32	Patna June 25, '92 Barh ... Bihár .. Dinapore ...	Nil 0·38 1·32 Nil	Weather—very hot and clear. The rainfall has been very scanty during the week and confined to Barh and Bihár subdivisions. The *bhadoi* sowing has been generally started, but more rain is much needed. Fodder and water for cattle are fairly sufficient. Common rice selling at 11 to 13 seers per rupee. No distress reported.
33	Gaya „ 25, '92 Jahánabad ... Aurangabad ... Nawáda ...	Nil Nil Nil Nil	Weather—intensely hot and oppressive with strong west winds. Ploughing in progress everywhere Sowing of *bhadoi* crops commenced, but much anxiety is felt by cultivators for the safety of the seedlings on account of the prolonged break in the rains Prices have risen slightly. Common rice selling at 11½ seers per rupee at Sadar. Supply of water sufficient and fodder becoming available.
34	Shahabad „ 25, '92 Buxar . Bhabhua ... Sasaram ...	Nil Nil 0·01 Nil	A break in the rains. Rain is urgently needed for the *bhadoi* sowing. *Marua* and sugarcane are withering for want of water. Prices show an upward tendency except in the south where a slight fall is reported. Fodder abundant.
35	Darbhanga „ 25, '92 Samastipur ... Madhubani ...	Nil 0 68 0 99	Weather—cloudy and close. The break in the rains continues and will affect growing crops unfavourably if it lasts a week longer. Young paddy is springing up in many of the *chur* lands, but much is still unsown. Prospects of *bhadoi* favourable, but rain wanted for this also. Cattle are in good condition. Fodder and water plentiful.
36	Muzaffarpur „ 25, '92 Sitamarhi .. Hajipur ..	0·74 1·03 0 02	Weather—very hot and close. Prospects of crops excellent. More rain will shortly be wanted. Prices almost stationary.
37	Saran „ 25, '92 Siwán ... Gopalganj ...	Nil 0 05 0·15	Weather—generally close and oppressively hot. There is sufficient moisture for sowing the *bhadoi* crops in Siwán and Gopalganj subdivisions, but in the Sadar subdivision *bhadoi* cannot be sown for want of rain. Fodder and water for cattle sufficient. Prices of common rice :— Srs. Ch. Chapra ... . 11 0 } per rupee. Siwán .. .. 12 8 } per rupee. Gopalganj ... ... 12 10 } per rupee.
38	Champaran „ 25, '92	Nil	Weather—hot and somewhat cloudy towards the end of the week. Sowings nearly over. Weeding of paddy and *bhadoi* crops going on. Transplanting of *marua* retarded for want of rain. Standing crops doing well. Supply of fodder and water ample. Prices unaltered.
	ORISSA.		
	Orissa Divn.		
39	Cuttack „ 25, '92	1·82	Weather—seasonable. Rainfall, though late, very beneficial. Sowing of *biali* and *sarad* in progress. Price of common rice 9 seers 2 chitaks to 13 seers 2 chitaks per rupee, but rice is not everywhere easily obtainable. No cattle-disease. Fodder-supply sufficient.
40	Puri „ 23, '92	0·49	Weather—hot and cloudy. Ploughing and sowing going on. Miscellaneous crops doing well. Rice sells at from 10 to 14 seers per rupee.
41	Balasore „ 25, '92	1·28	Weather—showery. Sowing of winter rice well in hand. Prices stationary. Rice selling at Balasore 13 seers and Bhadrak 15 seers per rupee.
	CHOTA NAGPUR.		
	South-West Frontier Agency.		
	Chota Nagpur Divn.		
42	Hazáribágh June 25, '92 Giridi ...	Nil 4·86	Weather—settled, fair; very sultry. Sugarcane doing well. Ploughing and sowing still in progress, but more rain is now wanted. Common rice 10 to 14 seers per rupee Water and fodder sufficient.
43	Lohardaga „ 25, '92	Nil	Weather—seasonable. Ploughing and sowing of *bhadoi* crops and winter rice continue. Common rice selling at 14 seers per rupee. Fodder and water sufficient.
44	Palámau „ 23, '92	Nil	The break in the rains continues; sky now cloudless and sun very hot. Showers in some parts of the district. *Bhadoi* sowing in progress. Common rice 12 to 15 seers per rupee. Fodder-supply increasing.
45	Singhbhum „ 25, '92	Nil	Rain in the district, but none at head-quarters. Paddy, sugarcane, *gundli* and Indian-corn doing well. No change in price of rice, which is selling at 16 seers per rupee in Chaibassa town.
46	Manbhum „ 25, '92 Gobindpur ...	Nil 0·56	Weather—hot and dry. Cessation of rain all over district. If dry weather continues the seedlings will suffer. Rice 13 to 16 seers per rupee. Fodder and water-supply sufficient.

Published for general information.

* Means of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ... The *humidity* of the atmosphere is expressed as percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The ... the numerical means or average of the rainfall in that district determined from the returns sent in by the subdivisional station for the period in question during the ... stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fall.

or the week ending Saturday, the 25th of June 1892.

DISTRICT OBSERVATIONS.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Rainfall: Of week. Mean for district.	Rainfall: Of week. Normal mean.	Rainfall: Since 1st of month. Mean for district.	Rainfall: Since 1st of month. Normal mean.	Rainfall: Since 1st of month. Variation.	Rainfall: Since 16th May 1892. Mean for district.	Rainfall: Since 16th May 1892. Normal mean.	Rainfall: Since 16th May 1892. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 28*th June* 1892.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 25TH OF JUNE 1892.

DURING the week ending the 18th instant, the wave of monsoon winds following in the rear of the cyclone of the previous week had spread over the whole province, and had given general rainfall for several days, though in the majority of cases the falls had been smaller than the normal amounts. This humid current, however, appeared rapidly to decrease in strength, and even finally almost to cease to flow over the greater part of the province. Hence from the beginning of the week rainfall began to be less general and lighter. The rainfall-bearing current apparently first withdrew from Bihár and Chota Nagpur and then from Orissa and South Bengal, but rain continued at many of the stations in East and North Bengal until about the 22nd, when the rain-bearing current to a certain extent withdrew from the province, for rain ceased to fall except at the stations in and near the hills of North Bengal. In its retreat, however, it again gave a few showers in Orissa. From the 23rd the rainfall over the province was confined to a few showers of little importance. In the Bay during the early part of the week the monsoon current appeared generally to be of moderate strength only, but from the 20th the wind velocities at the Ceylon stations showed that another strong advance of monsoon winds was taking place in the extreme south of the Bay, and these strong winds continued to blow for four or five days. With the strengthening of the monsoon winds in the Bay towards the end of the week another advance of humid winds again commenced to flow over the province and to give general rain, the rain as usual beginning at the southern, eastern and north-eastern stations, and on the last day of the week under review rainfall was tolerably general over these districts, though Bihár, Orissa, and Chota Nagpur remained almost rainless.

In other respects the meteorology of the week has not been important. Pressure rose slowly on the 19th, and again on the 20th, but on the 21st it fell in Bihár, while elsewhere the increase continued. On the 22nd the fall became more general, and pressure became slightly below the normal in all districts except South Bengal and Orissa. A slight fall again occurred on the 23rd, but the pressure distribution was little changed. On the 24th pressure had commenced to rise, the increase being large in parts of South Bengal, and distinctly low pressure was on this day established in the north and north-east of the province. On the 25th a moderately rapid fall of pressure set in which produced a distinct though rather feeble low pressure area in the north of the province, where pressure was more than a tenth of an inch below the normal, while in South Bengal and Orissa a band of relatively high pressure still continued to exist, and indeed pressure was still above the normal over this area. This band of high pressure has indeed formed a prominent character in the meteorology of the week. Temperature has on the whole risen steadily almost throughout the week owing to the diminution, and finally almost complete absence, of rainfall, and it became quickly above the normal, particularly in the western districts, where towards the close of the week the excess equalled about 10°. Winds on the whole have been fairly normal in direction and at the head of the Bay, and at many of the inland stations they have been decidedly stronger than usual at this season of the year, though this was not the case generally over the Bay area, except at the Ceylon stations, in the latter half of the week.

Pressure.—The variations of the mean pressure from the normal for the week have been rather irregular. Over the north of the province, and particularly in North Bengal where a depression existed for a part of the week, the mean pressure for the period has been in defect of the normal, the defect being largest at Jalpaiguri, where it equals 0·043". On the other hand, there has been an area of relatively high pressure over South Bengal and Orissa, where the mean pressure is about 0 03" in excess of the normal, and this excess is largest in Orissa, where at False Point and Cuttack it equals 0·06" and at Gopalpore 0·09". Between these two areas pressure is fairly normal. In Assam pressure has been below the normal by 0 025," the defect being largest at Sibsagar, where it equals 0 019".

Temperature—Has been above the normal over the whole of Bengal for the week, though in Assam there has been a defect of a little more than one degree. The excess in Bengal is small at the eastern and northern stations and in the extreme south-west of the province, equalling about a degree in East and North Bengal and Orissa and gradually increasing towards the western districts, where in Chota Nagpur it equals 4·1,° in North Bihár 3·6,° and in South Bihár no less than 6·0°. For the whole of Bengal indeed an average excess of 2·9° has been registered.

Rainfall—Has been unusually light during the week. An average fall of rather more than three and-a-half inches is recorded in North Bengal and one of two and-a-half inches in East Bengal. An average amount of about an inch has fallen in Orissa and South-West Bengal, but Chota Nagpur and Bihár have been almost rainless. In all cases the falls are very largely below the normal, a defect of about four inches being recorded in East and North Bengal and of about two to three inches over the remainder of the province. Generally speaking, indeed the rainfall for the week has not been much more than a third of the normal fall for the period.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 25th of June 1892:—

Meteorological Divisions	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week			Average mean of week above or below normal mean of week	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1892.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder.

* Includes 4,914 tons and 5,508 tons during 1892 and 1891, respectively, carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling-stock 14,399 tons and 7,769 tons for the years 1892 and 1891, respectively, for which no "Up" and "Down" register maintained.

Statement of principal commodities carried on the Eastern Bengal State Railway during the month of March 1892.

INCREASES.

	Tons.
Coal ...	18,820
For railway and Flotilla consumption principally.	
Rice ...	3,315
The chief increase is in despatches from Goalundo, Nawabganj, Joypurhat, and Sara Ghat. This is due to a short crop in the northern and Bihár districts, and to a brisk demand in the both districts and also to a rise in prices in the Calcutta market. Magra Hât also contributed to the increase, owing to the fact that the water in the canal is too low to allow of country boats carrying the traffic.	
Railway plant and rolling-stock ...	6,630
For renewals and repairs; and for Bengal-Assam, Bengal Dooars, and Kuch Bihar Railways.	
Salt ...	1,601
Ordinary fluctuation.	
Cotton ...	1,205
Postgolah and Goalundo show the principal increases. The traffic is a growing one.	
Tobacco ...	1,291
This increase was contributed principally by D. K. G., Siliguri, Domar and Araria, due to a good crop and a favourable market.	

DECREASES.

	Tons.
Jute, screwed ...	5,175
Daroani, Haldibari, Kasbba, and Damukdia Ghat show large decreases, due to short crop.	
Jute, unscrewed ...	18,268
The heavy decreases are in despatches from Goalundo, Sirajganj, Mymensingh, Kaunia, and Kaoraid, due to short crop.	

CALCUTTA, *the 22nd June 1892.*

P. BARCLAY,
Traffic Superintendent.

Weekly Return of Traffic Receipts on Indian Railways.

EAST INDIAN RAILWAY.

Approximate Return of Traffic for week ended 18th June 1892, on 1,558½ miles open.
